—If the unfortunate critic who thus individualized himself had been a sedulous reader of Bunyan, his power over English would not have been so jejune as to have needed that fearful word. This little bit of criticism excited much amusement at the time of its publication: but it was so thoroughly exceptional and individual that it was seldom or never charged on the book. The second instance occurred in the article 'Socinians.' It had been arranged that the head-words of Christian sects should be intrusted to members of the sects themselves, on the understanding that the articles should simply set forth the accounts which the sects themselves give of their own doctrines. Thus the article on the Roman Church was written by Dr. Wiseman. But the Unitarians were not allowed to come within the rule: as in other quarters, they were treated as the gypsies of Christianity. Under the head 'Socinians'—a name repudiated by themselves—an opponent was allowed not merely to state their alleged doctrines in his own way, but to apply strong terms, such as "audacious unfairness," to some of their doings. The protests which were made against this invasion of the understanding produced, in due time, the article 'Unitarians,' written by one of that persuasion. We need not say that these errors have been amended in the English Cyclopædia: and our chief purpose in mentioning them is to remark that this is all we can find on the points in question against twenty-eight large volumes produced by an editor whose task was monthly, and whose issue was never delayed a single hour. How much was arrested before publication none but himself can say. We have not alluded to one or two remonstrances on questions of absolute fact, which are beside the present purpose.

Both kinds of encyclopædic works have been fashioned upon predecessors, from the very earliest which had a predecessor to be founded upon; and the undertakings before us will be themselves the ancestors of a line of successors. Those who write in such collections should be careful what they say, for no one can tell how long a misstatement may live. On this point we will give the history of a pair of epithets. When the historian De Thou

died, and left the splendid library which was catalogued by Bouillaud and the brothers Dupuis (Bullialdus and Puteanus), there was a manuscript of De Thou's friend Vieta, the *Harmonicon Cæleste*, of which it is on record under Bouillaud's hand that he himself lent it to Cosmo de' Medici, to which must be added that M. Libri found it in the Magliabechi Library at Florence in our own day. Bouillaud, it seems, entirely forgot what he had done. Something, probably, that Peter Dupuis said to Bouillaud, while they were at work on the catalogue, remained on his memory, and was published by him in 1645, long after; to the effect that Dupuis lent the manuscript to Mersenne, from whom it was procured by some intending plagiarist, who would not give it back. This was repeated by Sherburne, in 1675, who speaks of the work, which "being communicated to Mersennus was, by some perfidious acquaintance of that honest-minded person, surreptitiously taken from him, and irrecoverably lost or suppressed, to the unspeakable detriment of the lettered world." Now let the reader look through the dictionaries of the last century and the present, scientific or general, at the article 'Vieta,' and he will be amused with the constant recurrence of "honest-minded" Mersenne, and his "surreptitious" acquaintance. We cannot have seen less than thirty copies of these epithets.

The Roll of the Royal College of Physicians of London; compiled from the Annals of the College and from other Authentic Sources. By William Munk, M.D., Fellow of the College. Vol. II., 1701 to 1800. (Longman & Co.)

HAVING in this second volume brought the publication of the Roll of the College of Physicians down to the close of the last century, the learned librarian of the Pall Mall Alma Mater terminates labours which have made a valuable contribution to biographic literature. To speak of contemporary physicians would be a difficult and ungraceful task for one who, besides being himself of "the faculty," occupies the official position of custodian of their archives. Dr. Munk, therefore, after placing before the public the succession of his learned fraternity from the times of Linacre to the days of Halford, does well to pause. It is only to be hoped that in 1961 the Physicians of the London College will have as high a place in public respect as that which they at present enjoy, and will also have a librarian able to continue the publication of "their roll," from 1800 A.D. to 1900 A.D., with the same care and learning which Dr. Munk has displayed in editing the prior annals.

Sir Hans Sloane, in a certain sense the Founder of the British Museum—the worthy man and dull poet, Sir Richard Blackmore—Sir Samuel Garth, the epicurean philosopher and wit—Radcliffe, the unlettered patron of letters—and Gibbons, the creator of mahogany dining-tables,—were the medical celebrities closing the roll of the seventeenth-century physicians, i.e., the physicians whose names were entered on the college books, and who began to practise before the year 1701. A perusal of the present volume brings before the reader Woodward, the story of whose duel with Mead has been maliciously preserved to us by Ward, in his engraved frontispiece to his 'History of the Gresham Professors,'—Dr. James Yonge, the navy-surgeon in Charles the Second's time,—Addenbrooke, the founder of Addenbrooke's Hospital in Cambridge,—Arbutnot, the beloved of Pope and Swift,—Mead, whose museum and magnificent hospitality in Ormond Street

were important features of London life in the earlier half of the eighteenth century,—Bishop Atterbury's Jacobite physician, Freind, the author of 'The History of Physick from the Time of Galen to the Beginning of the Sixteenth Century,' whose tomb may be found in Westminster Abbey,—Sir Edward Hulse, the lover of fees,—Jurin, the mathematician,—Stukeley, the antiquarian, whose proficiency in Druidical history earned for him amongst his friends the name of "the Archdruid," and who inscribed over the door of his house in Kentish Town,

*Me dulcis saturat quies,
Obscuro positus loco,
Lenti perfurax otio,
Chryndonax Druida,—*

Dover, the inventor of the combination of opium and ipecacuanha known as "Dover's Powder," who began life as a buccaneer, and ended it as a London physician,—Messenger Monsey, the benevolent misanthrope and valued friend of Sir Robert Walpole,—Dr. Meyer Low Schomberg, the unscrupulous practitioner who raised himself to notoriety and lucrative practice by entertaining at "a great dinner" once a week all the young surgeons of London,—Isaac Schomberg, son of the foregoing, memorable for his contest with the College of Physicians,—Dr. William Chambers, of Hull, whose custom it was to return to his patients a part of whatever fees they gave him,—Sir William Browne, the eccentric,—the not less eccentric Dr. Batty, lashed by Moses Mendez, Paul Whitehead, and Dr. Schomberg, in 'The Battiad,'—the gentle Quaker, Fothergill, indebted to his connexion with "the Friends" for his professional income of 7,000*l.* a year, and his noble garden at Upton, near Stratford, in Essex,—the venerable Heberden,—Aken-side, the poet,—Brocklesby, the friend of Dr. Johnson and the benefactor of Burke,—Dr. William Hunter,—Dr. Addington, the favourite physician of George the Third, and father of Lord Sidmouth,—"well-dressed" Henry Revell Reynolds, the last of the "silk-coated" physicians,—Dr. Warren, who from the time of the Regency till his death in Dover Street, on the 22nd of June, 1797, made 9,000*l.* per annum,—Dr. Daniel Bridges, the inventor of the Hull spermaceti candles, which at one time illuminated nearly every drawing-room in the kingdom,—the humane physician, and worldly Quaker, John Coakley Lettson,—the half-insane Sir Richard Jebb, who told an invalid lady that "she must have a—vitiated appetite" because she didn't like boiled turnips,—John Aikin, the *littérateur* and brother of Mrs. Barbauld,—humorous Babington,—enlightened Baillie,—scholarly Halford,—and well-descended Latham.

Such are a few of the principal characters, amongst a crowd of minor celebrities and deservedly unknown persons, whose lives Dr. Munk has sketched soberly and justly, and in several instances with great felicity of description and illustration,—some of his best materials (now printed for the first time) being taken from such sources as Dr. John Alderson's 'MS. Sketches of some of his Contemporaries.'

The facts taken from Dr. Yonge's MS. Diary, preserved in the Plymouth Institution, give a picture of a naval surgeon's life two centuries since, which the present generation of medical officers in Her Majesty's service would do well to reflect upon whenever they are tempted to be over-sensitive on questions relating to their "rank." Dr. James Yonge, the son of a Plymouth surgeon, was born in that town on May 11th, 1646. In the early part of 1657, ere he had attained his eleventh year, he was apprenticed to Mr. Richmond, surgeon of the Constant Warwick, a ship of 31 guns and 100 men. In

May, 1661, he became surgeon's-assistant in Lord Sandwich's fleet, then lying at the Downs, being appointed to the Montague, 64 guns and 250 men. He was present at the bombardment of Algiers, and his MS. Diary painfully describes the menial duties he had to perform, and the sufferings he had to undergo, especially after the battle. "He went down to dress the wounded men, who were placed on heaps of clothes to make it soft for them." He had not only to dress wounds, but also to perform all the drudgery now appointed to nurses and surgery attendants. "To boil gruel, to make barley-water for the sufferers, to prepare fomentations and poultices, to wash and dry bandages and rollers, to make the hammocks, to shave and trim any one requiring it," were the duties, besides the ordinary business of the surgery, which the surgeon's-assistant of the Montague had to perform. Such was the position of the barber-surgeon on board ship two centuries since. The description, perhaps, does not, as far as words go, differ materially from Smollett's pictures of the experiences of naval surgeons and their mates a century later; but Dr. Yonge's account has greater force, as it professes to be a matter-of-fact statement of personal adventure, not intended for the eye of the general public, whereas Smollett, although his means of personal observation were similar, was a novelist, and as such might be supposed to heighten the effect of his satire with touches of exaggeration and caricature.

Of Dr. Munk's numerous portraits, that of Sir William Browne, famous in his day as author, doctor, wit, fool and fop, is perhaps finished up with the greatest care. The son of a Durham physician, Sir William took his art and medical degrees at Cambridge, becoming an undergraduate of Peterhouse in the year 1707. He was still at the University when, shortly after the death of John Moore, successively Bishop of Norwich and Ely, that prelate's library was bought by the King for 6,000*l.*, and presented to the University of Cambridge. Just at the time that this royal gift reached Cambridge, a regiment of Cavalry had been despatched to the sister University, to keep the Oxford Jacobites in order. Young William Browne commemorated the discernment displayed in His Majesty's care for his two "seats of learning" in the well-known epigram:—

The King to Oxford sent a troop of horse,
For Tories own no argument but force;
With equal skill, to Cambridge books he sent,
For Whigs admit no force but argument.

—After taking his M.D. degree at Cambridge, Dr. Browne settled at Lynn, where he acquired a fine practice and amassed a considerable fortune, during a residence extending over thirty years. Whilst exercising his profession at Lynn, he obtained, through the influence of the Duke of Montague, the honour of knighthood from George the Second, and won for himself a high reputation for eccentricity. On the occasion of a pamphlet being written against him, he courageously nailed the scurrilous sheets to his door-post, so that all his dear friends might see them. On being knighted, it was the learned physician's humour to be styled "the honourable Sir William Browne." A respectable bookseller of Lynn, named Hollingbury (on presenting his bill to the knight, drawn out "Sir William Browne, debtor to Thomas Hollingbury"), was reproved for having omitted the epithet in his description of the debtor. "Mr. Hollingbury," said the physician, "you might have said 'the honourable Sir William Browne.'"—"I beg your pardon, Sir William," returned the bookseller, "but upon my word I did not know it was customary to prefix to the name of a knight the word honourable."—"As to that," replied the Knight, "it

may not be customary, but it would yet have been pleasing."

Having practised for thirty years in Lynn, where he achieved a reputation for gallantry as well as eccentricity, Sir William moved to London, and, enjoying the confidence of many patients, also made mirth for many laughers. Becoming President of the College in 1765 and 1766, he fought the battle of the Licentiates with an intemperance which ere long compelled him to beat an ignominious retreat:—

"The dispute with the Licentiates was then at its height; and Sir William Browne, a man of strong feelings, extraordinary garrulity, and utterly void of discretion, was wholly unfit at such a crisis to occupy the Presidential Chair. He was an energetic defender of the exclusive privileges of the English universities; and, in the contest between the College and Dr. Schomberg, had unfortunately printed a pamphlet as ill-judged as it must have been offensive to the Licentiates. These circumstances brought him under the lash of Foote, in his 'Devil on Two Sticks.' Foote gave an inimitable representation of the Esculapian knight on the stage, with the precise counterpart of his wig and coat and odd figure, and glass stiffly applied to his eye. Sir William sent Foote a card, complimenting him upon having so happily represented him, but, as he had forgotten the muff, he sent him his own. Whilst he filled the office of President, the Licentiates in a body forced their way into the College and even into the room where the Comitia was being held. Sir William maintained his composure, and at once dissolved the Comitia; but the affair left an abiding impression on him, and, dreading a defeat or some indignity, he determined to resign his office, not choosing, as he was wont to say, to stay to be beaten by the Licentiates. As another opportunity may not occur, I may here state that a second attempt was made the following year (1767) to break into the College, but the precaution had been taken of closing the iron gates which guarded the entrance from Warwick Lane. The assembled Licentiates offered a smith ten guineas and an indemnification of three hundred pounds to force the gates, but he refused."

The valedictory address of Sir William to the College, made on the occasion of his resigning the Presidency, is a curiosity worthy of perusal—but not of being extracted into our columns.

"As soon as he was out of office Sir William started on his visit to the springs. Whilst at Bath he paid a visit to Bishop Warburton at Prior Park. The learned prelate has drawn the following inimitable portrait of him in a letter to Dr. Hurd, dated 18th November, 1767:—"When you see Dr. Heberden, pray communicate to him an unexpected honour I have lately received. The other day, word was brought me from below that one Sir William Browne sent up his name, and would be glad to kiss my hand. I judged it to be the famous physician, whom I had never seen, nor had the honour to know. When I came down into the drawing-room, I was accosted by a little well-fed gentleman, with a large muff in one hand, a small 'Horace' open in the other, and a spying-glass dangling in a black ribbon at his button. After the first salutation, he informed me that his visit was indeed to me, but principally and in the first place to Prior Park, which had so inviting a prospect from below; and he did not doubt but, on examination, it would sufficiently repay the trouble he had given himself of coming up to it on foot. We then took our chairs, and the first thing he did or said, was to propound a doubt to me concerning a passage in Horace, which all this time he had still open in his hand. Before I could answer, he gave me the solution of this long misunderstood passage, and in support of his explanation had the charity to repeat his own paraphrase of it in English verse, just come hot, as he said, from the brain. When this and chocolate were over, having seen all he wanted of me, he desired to see more of the seat, and particularly what he called the monument, by which I understood the Prior's Tower, with your inscription. Accordingly, I ordered a servant to attend

him thither, and when he had satisfied his curiosity, either to let him out from the park above into the downs, or from the garden below into the road. Which he chose I never asked, and so this honourable visit ended. Hereby you will understand that the design of all this was to be admired, and indeed he had my admiration to the full, but for nothing so much as for his being able at last to perform this expedition on foot, in no good weather, and with all the alacrity of a boy both in body and mind.' How long the knight continued on his travels I have no means of discovering. Ere long, however, he returned to Queen Square, and in a contest for some subordinate parochial office, carried on so warmly as to open taverns for men and coffee-house breakfasts for women, he exerted himself greatly, wondering, however, as he himself expressed it, that a man bred at two universities should be so little regarded. A parishioner, in reply to some such remark, answered, 'That he had a calf that sucked two cows, and a prodigious great one it was.' At the age of eighty, on St. Luke's day, 1771, he went to Betson's coffee-house, in his laced coat and band, and fringed white gloves, to show himself to Mr. Crosby, then Lord Mayor. A gentleman present observing that he looked very well, he replied 'he had neither wife nor debts.' Sir William Browne died at his house in Queen Square, Bloomsbury, 10th March, 1774, aged 82. His lady died 25th July, 1763, in her 64th year. His remains were interred at Hillington, co. Norfolk, and in the church is a handsome monument to his memory, with a long and pompous inscription, admitted in his will to have been the offspring of his own pen. The will, drawn up by himself, was a curiosity: it is singularly demonstrative of his character and oddities, but is not wanting in philanthropy. In the preamble he lashes orthodox and heterodox alike, and the Greek and Latin with which it was interlarded puzzled the people at Doctors' Commons. On his coffin, when in the grave, he desired might be deposited, 'in its leather case or coffin,' his pocket Elzevir Horace, 'comes visæ vitæque dulcis et utilis,' he adds, 'worn out with and by me.' He disposed of his property judiciously and equitably, and left certain prize medals to be given yearly to Cambridge undergraduates."

The chief reflection which no intelligent reader of Dr. Munk's volumes will fail to indulge in, and which every earnest young student of medicine will not only make but use also as a means of intellectual guidance, is how little three centuries of physicians accomplished towards advancing the science and art of medicine. It has been said of an admired ex-Chancellor that he was a master of every subject except law. A similar criticism is provoked by a survey of the ripe scholars and pleasant "gentlemen of the world" who practised physic from the days of Linacre down to the year 1800. They seem, collectively, to have been masters of every art except that by which they earned their living. They enriched our literature with poems, novels, dramas, histories, and treatises; in mathematics and many departments of natural science they were zealous and efficient labourers; but medicine they left as they found it, a farrago of the traditions of pedantry and the fanciful usages of empiricism. With the opening of the present century the new era in the history of medicine began, with its system of extended and fearless observation, minute inquiry, and careful induction. It is, however, not seldom that medical practitioners manifest a desire to exalt the dignity of their vocation by magnifying the character and attainments of their predecessors in past ages. Hippocrates and Celsus are no longer imposed as demi-gods on every lad who grinds potash with pestle and mortar; but one still too often finds in medical works a tendency on the part of professional writers to quote as authorities treatises, written in the ages of medical darkness, which have no title, save age, to any

kind of respect. Than such a course, none can be more unwise. The public are too well informed on the medical knowledge of the past to be affected by any appeal to ancient error; and physicians, both for their dignity and their pecuniary interest, act most wisely when they draw a line between the quackery and unob-servant empiricism of the eighteenth century and the scientific investigation of the nineteenth. The tomb of John Woodward, M.D., may be seen in Westminster Abbey, where he was interred in the year 1728. Few men of his time more deserved honourable sepulture than he. It was true that he was expelled the Royal Society for insulting Sir Hans Sloane, — Sir Isaac Newton, as chairman, saying that “in order to belong to that society, a man ought to be a good moral philosopher as well as a natural one.” But he was author of the ‘*Essay towards a Natural History of the Earth*,’ and enriched the University of Cambridge with the Woodwardian Museum, the formation of which collection the present Master of Trinity has justly designated one of the most remarkable occurrences in the progress of descriptive geology in England. What was the medical practice of this enlightened man of science? It consisted of “vomits and cathartics administered alternately, *de die in diem, till the rich man grows tired, or, being quite spent, is forced to give over.*” The memorable duel between this doctor and Mead grew out of a discussion on the propriety of administering cathartics in the secondary fever of small-pox. Such gentle remedial measures would subject a medical practitioner of the present day to conviction on a charge of manslaughter, and, under certain circumstances, of murder. Such was “old Physic.” “Young Medicine” had better repudiate all kinship with it.

Memoirs of King Richard the Third and some of his Contemporaries; with an Historical Drama on the Battle of Bosworth. By John Heneage Jesse. (Bentley.)

THESE are not the days in which even a peer would venture to declare, as was once done by the old Duke of Marlborough, that all he knew of the history of England was derived from Shakspeare. Yet even in these days it must be confessed that many of our earliest historical impressions are received from the poet, and that, beautiful and erroneous as they are, it is an exceedingly difficult matter to disturb them.

In no case is this unfounded impression stronger than in that of Richard the Third. The dramatic writer and the tragedian together have built up a sort of Frankenstein, which at once attracts and repels, and is the very opposite of truth and nature. On the stage, Richard is an impatient, shallow, sanguinary fool, a man not for whom the people would have thrown up their caps, but would have buffeted him with them. Our players represent him as a sort of vivacious, capricious, wild ass, given to kicking, and deafening the public ear with his discordant braying; whereas he was an astute, calm, dignified, self-possessed gentleman, unscrupulous in some things, but having the advantage of representing peace instead of anarchy, and of being endowed with qualities which rendered him acceptable to the Parliament, and made of him the dearly-beloved son of the Church. Man for man, he is infinitely more respectable, for he was a braver man than Henry the Seventh. As for the murder of the young Princes, even granting that they were murdered, and that Richard was the assassin, the deed was not worse than the useless murder of the young Earl of Warwick, by Henry. The sacrifice of the Princes, if they were sacrificed,

was at least a guarantee that the kingdom should not fall into anarchy. The murder of young Warwick was only profitable to Henry himself: he thereby accomplished the Spanish alliance, which cost the country so dearly.

It would be ill-natured satire to suggest that Mr. Jesse composed his “historical drama on the Battle of Bosworth” in order to correct the misrepresentations of Shakspeare; and nevertheless some such idea seems to have presented itself to him. At all events, in order to enable him to be the more exactly accurate in his play, he first wrote the ‘*Memoirs of King Richard the Third*,’ studying many authorities, yet leaving much unread or unused, so as to imbue himself with the spirit of the times. The process is curious, the more so as, after all, his drama on the Battle of Bosworth does not contain the character of Richard among the *dramatis personæ*!

The ‘*Memoirs*’ then stand as Mr. Jesse’s preparatory exercises, before venturing on his self-imposed task as playwright. Having let the curtain fall upon the play, he is unwilling that the exercises should be lost. They accordingly stand a sort of preface of four hundred pages to a drama which reaches only a quarter of that extent.

In this preface the compiler goes very honestly to work. He states his authorities—Miss Strickland, Lingard, Sharon Turner, on whom he places great reliance, and so on upwards to earlier printed records. He thus fairly demonstrates that he has nothing novel to bring forward, and that he only collects from many scattered sources, and collects for the curious reader what that intelligent but lazy personage is unable, or is too indifferent, to collect for himself. The authorities, indeed, are easily accessible, and Mr. Jesse might have gone further with much advantage. How he came to overlook so graphic, amusing, and, in phrase, so audacious a chronicler as old John Trussler, we are at a loss to imagine. There is an air and savour of the stormy time all over the chronicle of Trussler, which deals with the York and Lancaster period only; an air and a savour altogether dispersed and lost by the latest of his cited authorities; than whom Trussler, with all his strong bias hilariously indulged, is, at least, not more one-sided.

To the original sources from which much that is new to the general public, though less so to the wary collector who prefers manuscripts to printed books, Mr. Jesse does not appear to have had access. These, however, are highly characteristic of King Richard. There are documents here in London, the first portion of which seems to have been written by a clerk or secretary. The scribe, however, failing perhaps to seize the meaning of his master, lays down the pen, and the remainder of the despatch is finished in Richard’s own bold and steady hand, and subscribed thereto is the signature of his name, boldly dashed forth, yet with such grace and correctness that kings and gentlemen generally of this day might take it for an example, which, after much practice, they would probably not equal.

In the documentary field Mr. Gairdner has been gleaming, while Mr. Jesse was diligently compiling his book from printed sources. Thus, the latter gentleman has lost a golden opportunity, which he handsomely recognizes in a postscript. The addition to previous information given by Mr. Gairdner in the volume published by the authority of the Master of the Rolls, and recently noticed by us, is all creditable to the character of Richard. Among his first acts after his accession and the establishing of his government in England, was, as his despatch to Lacy expresses it, “to show that

the King principally, afore other things, intendeth for the weal of this his land of Ireland.” Perhaps not even in the north of England was the Yorkist cause more zealously upheld than it was in Ireland. In Richard’s case, indeed, York was unseating York, but the people at large, without desiring the destruction of the nephews, hailed heartily the advent of a strong government in the person of the uncle. Richard’s father, bearing the same name, that Duke of York who represented the legal line of succession to the throne, and lost his life at Wakefield in endeavouring to establish it, had been one of the most popular, far-seeing, and able of the Lords Lieutenant of Ireland. Many an Irish nobleman, gentleman, and hardy follower of both went down with him at Wakefield. Richard’s appeal to Ireland was, therefore, most natural, and it was most seemly and becomingly made. He promises “good rule and politic guiding,” and he addresses himself to individuals in the name of the gallant father whom the Irish honoured. The Earl of Desmond is delicately reminded of “the manifold notable services and kindnesses done by the Earl’s father unto the famous prince, the Duke of York, the King’s father, at divers seasons of great necessity.” Another great man is reminded that he is “descended of the ancient blood and lineage of our ancestors of Ulster,” and his support is asked in the recalling of “the noble service that ye and your kinsmen, in the days past, have done unto the famous Prince, of noble memory, our father, whom Jesu rest!” When his own son was growing up from infancy to boyhood, Richard appointed the young Edward Lord Lieutenant of Ireland, and named Gerald Earl of Kildare, the young lieutenant’s deputy, on no other ground than that Kildare had administered the same office under the Duke of York “with noble courage, well and faithfully.”

We have already, in our notice of Mr. Gairdner’s volume, shown Richard’s gallant anxiety to procure good Burgundy for himself and his Queen. He was evidently not too much of a hero, nor too greatly pre-occupied to enter into details; witness the anxiety with which Desmond is enjoined to renounce “the wearing and usage of the Irish array,” and “to give and apply himself to use the manner of apparel for his person after the English guise.” Singular associations of acts, too, in the same person. The King, who is said to have slain his nephews, was laudably anxious for, and very successful in, the abolition of taxes; he was, night and day, vigilant for the safety of the Crown, and could find time to send an English bishop to Desmond, with “patterns of gowns, doublets, hose, bonnets,” and a choice assortment of hats, tippets, shirts and kerchiefs! These and other illustrations of character, of which much might have been made, Mr. Jesse has missed; and it is only in a postscript that he borrows the metrical portrait of Gloucester, given by us in a paragraph with modernized orthography, from Mr. Wright’s ‘*Political Ballads*’ of the period.

Mr. Jesse, then, having with great industry compiled from most of the published sources extant this ‘*Memoir of King Richard*,’ the book takes the form of a mass of evidence, which the reader has to digest. The compiler does occasionally assume the office of judge, and sums up testimony for or against his hero. But these pages are to us echoes of other speakers, and Mr. Jesse in this character advances nothing new.

The conclusion, as far as it may be drawn from the evidence now available, amounts to this,—that Richard was a very gallant and accomplished youth when he held the manor of Notting Hill and other forfeited property

of the De Veres; that there is not the slightest proof of his having stabbed the Lancastrian Prince Edward at Tewkesbury,—indeed, no proof that the young Prince was stabbed there at all, but much presumptive evidence that he fell in fair fight, while conducting himself like a fearless, stout-hearted, young English gentleman. The question of the usurpation rests where it did. Richard might have acted more unselfishly, but he rescued England from that faction of the Woodvilles which had but one great man in it, the Earl Anthony, and whose supremacy would have brought degradation and calamity upon the realm. It is Mr. Jesse's opinion, with regard to the alleged assassination of the young Princes, that, if the matter were handled by a coroner's jury, they would return a verdict of "wilful murder" against Richard. Of this, we entertain a large measure of doubt; or, if such a verdict went from a court of preparatory investigation, we cannot readily believe that it would be confirmed by a court of solemn trial. There is, indeed, little doubt of the fact, but there is just that amount of doubt which would entitle the accused to his acquittal in England, and to a verdict of "not proven" in Scotland. It is unnecessary to urge all that there is on record against him. It is heavy, and dark, and condemnatory enough, but it is, also, sufficiently familiar. On the other hand, there was no identification of body; and there was exactly that amount of extraordinary semblance of truth in Perkin Warbeck, of conviction of the identity of his person with one of the Princes, and of perfectly unaccountable conduct on the part of Henry the Seventh, if he could have proved Warbeck to be an impostor, the recognition of whom as a true man imperilled the Tudor himself. There is quite sufficient of all this to induce the charitable, at least, not to condemn without a reservation in the judgment.

But take it, as we fear it is rather than that we know it to be, that the princely boys were made away with according to the current story. In treating the question even in this light, it will be necessary to judge of all in accordance with the code of manners and customs then existing. Nothing then was held so cheap as life. In the Lancaster and York feud—a thorough family quarrel in its bitterness, its endurance and its recklessness—relatives were killed by relatives after every battle. No regard was had to kinsmanship when the next-of-kin stood a captive adversary before the victor in the fight: the conquering Prince sent his chained cousins to the block, by dozens. The Plantagenets had no scruples about murdering their nearest connexions, when these lay in their way and impeded their advance. It is not necessary to recite their names; they will recur to all who read these lines. Mercy was not known; it, at least, was not required or not exercised in these extreme cases. When an illustrious personage saw a sacrifice was necessary, his first thought was, that some one else should be the victim. This does not tend to prove that the politically merciless to others was personally heartless to his own. Richard, who could hire another hand to murder his brother's children, would be faint at the sickness of his own; and he who could compass—if he did compass—the dear lives of the sons of Edward, went almost mad with grief when his own son, for whose sake he had done it all, gently died away, painless and happy, up in the old house at Middleham.

With later times came improved ideas. Henry the Seventh felt himself bound to find a reason for the killing of young Warwick, whose claims to the crown excited in him fear and disgust; but when Lady Arabella Stuart

was in the hands of James, who had similar fears and feelings with regard to that descendant of the daughter of Henry the Seventh, he only locked her up. But he did not escape imputation of poisoning her when she died: so recent were the times, or so fresh the memory of them, when such deeds were done on heirs presumptive. So, at a later period, James the Second killed his nephew, Monmouth, after admitting him to an audience, which was tantamount to pardon, for the King's shadow casts grace where it falls; but the law, at all events, justified James. More recently still, there was the case of Frederick, Prince of Wales, whom his mother and his sisters hated and loathed, for reasons that must have had very strong and terrible grounds. There was a question, it is said, about getting rid of this person so odious, at one time, to his own family. But the idea never went further, if this part of the story is to be believed at all, than in kidnapping and carrying him to the plantations, where he was to be concealed for life. The tradition of such acts, as to the possibility of their being committed, survived to a very late epoch. When the son of this Frederick became heir to the throne occupied by George the Second, a few people seriously believed, or affected to believe, that it would be well not to allow him to be too closely approached by his uncle, Cumberland. Now all such ideas have passed away. There are examples abroad where reigning sovereigns have killed their own sons. The Czar Peter would stand very uneasily at the Old Bailey if he could be tried there with respect to that little affair of his boy Alexis. Others, again, have, for the mere luxury of the thing, seized an unsuspecting prince, accused him of being a pretender, and murdered him outright, as Napoleon the First did in the person of the Duc d'Enghien, for whose bloody disposing-of he found so ready a Tyrrell, a Deighton and a Forrest. Yet observe how ideas changed within a few years. The nephew of the same Napoleon invaded the kingdom of Louis-Philippe twice. The old king pardoned the first attempt, and placed the offender under mild restraint for the second; and by giving him life, afforded him his last and successfully-used opportunity to mount the throne and confiscate his predecessor's family property. It was to obviate such possible consequences that kings of old followed more rigorous courses, and found ready absolution if they only accomplished the course thoroughly.

The Marquis de Villemer. By George Sand. (Paris, Lévy.)

This is by no means Madame Dudevant's last novel; that lady having of late become as frequent, if not as fertile, in production as Mrs. Gore herself. We fancied that we had taken leave of her some three years ago, in 'Daniella'—so clearly was creative inanition visible in that extravagant Italian romance; but being the other day assured by a well-reasoned criticism in a French contemporary, that the novelist's talent had entered into an entirely new phase, of which this book was a signal example,—it became a duty to try again.—We have read 'The Marquis' without much weariness, without much pleasure, but without finding the distinction drawn by a brother in the craft made good.—It appears that Madame Dudevant has simply followed a law of Woman's nature. After having devoted her early authorship to the display and deification of all that is wildest, most corrupt and most sensual in passion,—and the noon of her talent to the exposition of social and political theories based on insufficient data, and

illustrated by characters as fabulous as the Chimera or the Unicorn,—after then having retired into pastoral life, with the stage air rather than the real grace of peasant simplicity,—she has of late betaken herself to pictures of society and manners, with an eye to those delicacies, decorums and luxuries, which at first were so dragged through the mire by her heroes and heroines, and subsequently disdained with such Spartan severity by her unlettered priest-peasants, her inspired carpenters, and the strong-minded heroines who resorted to the same as to the only teachers from whom true love and deep Christian wisdom could be learnt.—This desire of "rehabilitation" (we have no equivalent word in English) was to be traced throughout the strange and insincere *Memoirs*, which some years ago it was our duty to follow to their close. There was everywhere visible in them a wish to excuse, and to gloss over,—to set things to rights in the case of certain persons and events; accompanied by an unsparing resolution to represent in the most merciless and damaging light every character and fact which were necessary to the purposes of defence, advocacy and reconciliation.—All was done in vain.—Too much of the lady's past was in print, written by her own hand, for her later reserves and qualifications to be cordially accepted. The golden motto, that in some cases silence is safer than apology, had been too entirely lost sight of by the author.—Her later novels, of which 'The Marquis' is one, may not have been written so much with a purpose as from the emptiness of a mind exhausted by those storms of passion which devastate rather than deepen,—one to which confidence in creation has become a habit. Be this as it may, we cannot agree with our French friend in considering the specimen before us as more true to the life described than was Madame Dudevant's 'Lelia' to the sublime intoxication of the immoralities there paraded,—or her 'Le Compagnon' to the actual relations which exist between Wealth and Work all the world over.

The old Marchioness de Villemer, however, is a highly-finished and excellent study of the great French lady of other days—with her grace, her courtesy, her condescending liberality, her cherished aristocratic prejudices, her unequal love for her two sons (one a prodigal, the other a model of learning, self-sacrifice, and manly virtue), her personal idleness, her devotion to society received at home, and to talk which touched the surface of all that passed, and to the writing of long letters.—But here, we fancy, the probability of the characters ends. The heroine, Caroline, is an impossible humble companion, compared with whom *Jane Eyre* was but huckaback as measured against brocade. From her first entrance into the family she bewitches every one, is received as trusted friend and depository of delicate secrets, and loaded with presents—so great is the magic of her sea-green eyes (unlike *Becky Sharp's*), her fearless, pleasant tongue, and her perfect tact in doing what is helpful, self-asserting, yet maidenly, under circumstances for which no previous experience could have prepared her.—The model Marquis—a reserved student—falls in love with her, much as did *Count Albert* with *Consuelo*, without meaning it. The reclaimed Duke, whose debts the younger brother pays, with "effusion," and who till the age of thirty-six has been one of those irresistible libertines whom women (Women's novels tell us) are so apt to prefer:—flutters after the sorceress—and, finding this vain, with a nice and natural ingenuity, engages her to assist him in reconciling the Marquis to life and happiness (for the

Marquis treasured a heart-sorrow, in a past amour with a married woman, now dead, and a son was born to them, whom he is obliged to conceal during her husband's lifetime). Meanwhile, the Duke manages to fascinate the brilliant heiress laid out for his regenerator, and so to restore the family fortunes.—Diana, his duchess, like all the rest, adopts and cherishes Caroline, the companion.—Well she may; for chance and her wonderful presence of mind led Caroline to be on the spot at midnight, at a crisis when the Marquis must have died in his chamber, of a mysterious disease, had she not been there, and efficient.—This incident, however, is turned to evil account by a shallow, intriguing widow (the only evil creature in the tale). Being suspected by the old Marchioness, and resolving to die ere she owns her love for the Marquis, the miraculous Caroline makes good her flight to the cottage of a pattern nurse, with a pattern Protestant husband, whose home is in the Cevennes.—By chance she there stumbles on the concealed child of the Marquis, a rare creature, for whom she conceives an instant attachment, not knowing his origin!—By chance the Marquis, coming under a feigned name to watch over his offspring, stumbles on her whose loss, without clue for discovery, has been wearing him to the grave with sorrow. The two, and Peyraque the Cevenol host, are surprised by a tremendous mountain-storm, when Caroline's ready wit rescues the three from death.—In the moment of agony, of course, she yields up her love-secret. Just as they are rejoicing in the rescue, up gallop the Duke and Duchess, ten words from whom have unmasked the calumniator and set everything right with the old Marchioness, who, like every person else, has been pining for Caroline. She is restored to the bosom of the family in triumph, and becomes the young Marchioness of Villemer. All this, we fear, is too pretty and pleasant to be probable. What may be the truest in the book (the ways and manners of the old lady excepted) are its pictures of French provincial scenery, which Madame Dudevant paints here, as everywhere else, with a true artist's hand.

Egyptian Hieroglyphics; being an Attempt to explain their Nature, Origin, and Meaning. With a Vocabulary. By Samuel Sharpe. (Moxon & Co.)

THIS work, by the accomplished historian of Egypt, gives a further proof of the depth of his researches, and of the extent of the materials within his grasp. Uninviting as sheets of hieroglyphics are found to be by the general mass of readers, this little volume will do much, by its clearness and simplicity, to remove all objections, and to create an interest where none existed before. Mr. Sharpe's Vocabulary consists of upwards of two thousand groups of hieroglyphic signs, &c., forming phrases, and arranged, not according to any alphabetical system or classification of the objects represented, but according to the resemblance of their meanings, so as to form a regular succession of ideas. The book is, therefore, hardly available as a dictionary, but it becomes especially valuable as showing the consistency with which the ancient Egyptians employed certain figures for particular ideas, and retained them through their various modifications. The names of the gods are placed first, then the temples, priests, service, &c.; then kings, kingdoms, countries, time, astronomy, calendar, and so on. In each instance a special authority is cited, so as to refer the reader at once either to the Rosetta Stone, Tablet of Abydos, or to some particular and

published inscription, by which he may satisfy himself or pursue the subject still further. Nothing can be fairer. The Introduction, which occupies a considerable portion of the book, contains a full but concise history of our acquaintance with hieroglyphics, of the value of the various statements transmitted to us by the Greek and Latin authors, and, finally, gives us a lucid account of the peculiarities of the old Egyptian system of writing.

Even in the outset Mr. Sharpe's observations on the alphabet, although very simple, have a peculiar interest. We learn that, in almost all cases, the reader of Egyptian letters, in following the order of the words, meets the faces of the animals and the points and openings of the other letters. In the Hebrew, Greek, Arabic, and even in our own printed alphabet, the reader follows the backs of the letters. In the earlier stages of hieroglyphic writing there seems to have been greater simplicity; and Mr. Sharpe observes, that the great kings who ruled in Thebes when Egypt was in its purest state used only three or four characters within the first oval, and, perhaps, six within the second; whilst for the Ptolemies, in the age of decadence, as many as thirty characters were crowded within the oval ring:—

"Although several inscriptions are published which were certainly sculptured before the time of Moses, yet all of them contain many words spelt with letters; none of them are sufficiently ancient to show the original introduction of letters among the symbols. But, as none of them contain any peculiarities which would lead us to suppose that they were among the first specimens of carved hieroglyphics, it seems probable that future research may throw light upon this interesting subject, by making us acquainted with inscriptions of a more primitive form. It is not impossible that we may find inscriptions in which we may perceive the absence of letters felt as a want, and the mode in which that want was first supplied. In the later inscriptions, however, the number of words written by means of letters certainly increased, as also the number of letters used to form a word; and, indeed, the number of letters, and the complexity of the words, may at all times be admitted as strong evidence in proof of the modernness of an inscription."

In proceeding to the evidence borne by the Greeks and Romans upon the signification of Egyptian hieroglyphics, Mr. Sharpe gives us the following quotation:—

"Tzetzes the grammarian, in his 'Exegesis on Homer's Iliad,' has saved for us a fragment from the lost work of Chæremón on hieroglyphics. It is too valuable to be omitted. Some of his explanations confirm those given in the Vocabulary. * * The words of Tzetzes are as follows: * * 'For joy they paint a woman playing on a drum, and for misfortune, an eye weeping; for not having, two empty hands outstretched; for rising, a snake coming out of a hole; for setting, the same going in; for return to life, a frog; for the soul, a hawk; the same for the sun, and for God; for a child-bearing woman and mother, and time, and heaven, a vulture; for a king, a bee; for birth, and self-born, and male, a beetle; for the earth, a bull. The foreparts of a lion signify according to them all government and guard; a lion's tail, necessity; a stag, the year, and a palm-branch the same; a boy signifies increase; an old man, decay; a bow, sharp force; and there are a thousand other such.'"

The work entitled 'The Hieroglyphics of Horapollon Nilous,' professedly translated from the Coptic into Greek, by one Philip, is next commented upon at considerable length:—

"Out of the one hundred and eighty-nine groups which Horapollon undertakes to explain, it would be difficult to point out forty in which he has a knowledge of the true meaning; and in most of these he is remarkably mistaken in the reasons which he assigns for the meaning. He is not

aware that the characters represent sounds, but supposes them all to be figurative or allegorical. We are told by Suidas that Horapollon was a grammarian of the reign of Theodosius, who, after teaching for some time in the schools of Alexandria, removed to Constantinople; but we may fairly doubt whether our author is the person he is speaking of."

Mr. Sharpe, however, by his quotations from the author, and by the illustrations which he himself adduces from the well-known and genuine monuments of Egypt, shows that Horapollon was not altogether misinformed; and we feel a regret that, in a review like the present, it would not be consistent to follow him more minutely. The following examples of his quotations and notes may suffice:—

"Chap. 56. When they wish to signify a king that governs absolutely, and shows no mercy to faults, they draw an eagle. Note. The eagle and globe is the usual title of a king. The eagle is an A, the globe is Ra, making the word *king*; and, with article prefixed, the well-known word Pharaoh.—Chap. 57. When they wish to signify a great cyclical renovation, they draw the bird phoenix."

Mr. Sharpe, in his note upon this refers to a coin of the Emperor Antoninus with the word AIQN, an age or period, written over an ibis. This marks the conclusion of a great year, on which occasion the ibis or phoenix was said to return to earth. In hieroglyphics, a palm-branch is the word "year"; and from this the Greeks seem to have derived the name phoenix, φοινῖξ, a palm-tree, for their fabled bird.

Nor should the following be omitted:—

"Chap. 32. When they would represent 'delight,' they write the number sixteen. Note. We have a coin of Hadrian, with the figures Sixteen over a reclining figure of a river god, to denote that sixteen cubits was the height of rise in the Nile at all times wished for. We have other coins on which the river god is surrounded by sixteen little naked children or Cupids; and it would almost seem that the Alexandrian artist had, in this case, had in his mind the similarity in sound, in the Latin language, between Cupids and cubits."

There is, also, a very interesting table of hieroglyphic letters, showing, in the first instance, those which had been borrowed by the Hebrews, and, secondly, those adopted by the Greeks. The Egyptian letter T, represented by a hand, called *Teth*, is clearly imitated in the Hebrew ט, where the thumb and bent fingers are still traceable. The Hebrew Aleph, א, and the Greek A are also derived from the Egyptian eagle. The Greek Delta, Δ, is only a simplification of the Egyptian symbol of the human shoulder with two arms raised to a point; and the Hebrew k, כ, is derived from the human arms raised vertically in the Egyptian, but modified, by being turned on end, by the Hebrews. The Egyptian head-dress becomes the letter N both with the Hebrews and Greeks, and the letter S, in like manner, grows in both languages from a peculiar form adopted in the hieroglyphics. It is entertaining enough to follow out these various changes and adoptions, but without the types and hieroglyphics themselves no adequate idea can be given. On glancing down the columns of these symbolic figures, given in the plates, and finding how thoroughly particular forms and objects are thus classified and kept together, we feel that the author has really adopted the best possible system both for reference and for general reading; and we must, in conclusion, express our admiration at the very clear and characteristic manner in which the illustrations have been drawn.

Recollections of an Old Hussar Officer from 1802-1815—[*Ein Deutsches Reiterleben. Erinnerungen eines alten Husaren Officiers aus den Jahren 1802-1815*]. Edited by Julius von Wicke. Vol. I. (Berlin, Duncker; London, Thimm.)

In spite of Crimean war and Indian mutiny, readers still linger fondly over memoirs of officers who distinguished themselves in the old war, and during the past year our columns have contained honourable mention of several works of this nature. Much greater interest, however, is produced by such memoirs in Germany, and naturally so; for the wars in which our cousins have been engaged since 1815 have nothing great to be proud of. The Schleswig-Holstein campaign people are agreed to forget; while all the desperate efforts made by Hackländer and other appointed panegyrists of the Austrians will not induce their readers to regard the last Italian war otherwise than as an utter *fiasco*. We are not surprised, therefore, at the very hearty reception given to the volume we have now under consideration in Germany; and though we may feel disposed to carp at Von Wicke's reticence in the matter of the hero's name, we cannot gainsay the interest of the volume.

Fritz (so we must call the officer through the absence of a patronymic) was descended from an old Pomeranian family, the members of which had for generations devoted themselves to the military profession. He was born in the garrison town, where his father was attached to the Blücher Hussars in 1786, and had scarce seen light ere his father wrapped him in a blanket and galloped with him to the parade-ground, where he presented him triumphantly to his Hussars. The child's christening was also strictly military; the whole regiment attended the church, the hero of the day being borne by the Quartermaster, a veteran from the Seven Years' War. The cushion on which he lay was his father's parade Schabracke, and he was dressed in a jacket of the regimental cloth. The child's education was equally Spartan; up to his fourth year he was ignorant of the comforts of trousers or cap, and his exercise consisted in riding across country on the saddle-bow of the aforesaid Quartermaster, hanging on, like grim death, to his white pendent moustache.

In 1792, the boy's father received the route to march against the French, and Master Fritz was sent off to his grandfather, in Hinder Pomerania. He never saw his father again, who was killed in action during the following year. The grandfather, an officer of great age, many wounds and noble descent, was very eccentric in his way, and so liberal that his large income hardly sufficed his outgoings. He had a small silver bugle, which he always took to bed with him, and regaled grandmamma with the first verse of 'A Tower of Strength is our God' before going to sleep. Everybody who came to the house met with a hearty reception. Once a notorious band of robbers collected at the house, in order to plunder it at night. Grandpapa was delighted at the idea of his tranquillity being broken in upon by a little military adventure. He armed the men he could trust, and lay in wait for the robbers. The latter were disarmed after a sharp action, and the next morning the old gentleman had the villagers convened, and gave the robbers fifty lashes a-piece. Each of the latter then received a good breakfast, a large glass of brandy, and a florin for travelling expenses, with a hint not to return, or he would receive a double dose of stick.

After awhile, grandpapa thought it advisable

that Fritz should learn something besides riding and shooting, and took him off to the village schoolmaster, with directions to treat him like ordinary peasant lads, "as no boy ever learned to read without stick"; and the schoolmaster did his duty conscientiously, though careful at each blow—and there were many of them—to qualify the patient as "the young lord."

When the lad was of the proper age, the old nobleman wrote to Blücher, requesting him to appoint his grandson to his Hussars, which was granted in the most flattering terms. A parting banquet was given in the boy's honour, at which grandpapa performed an ancient but slightly disagreeable custom. He led Fritz out in presence of the assembled guests, and gave him a most stinging box on the ear, saying the while with a laugh, "That is the last blow, lad, you must allow to pass unavenged. If any one henceforward insults you, you will challenge him to fight with sabres, and hold on so long as a drop of blood remains in your carcase." On July 1, 1802, our young Hussar left his paternal home, with well-lined pockets, to join head-quarters.

Our author speedily found, on joining his regiment, that all that glitters is not gold in a soldier's life. The junkers especially were most strictly looked after, as the following extract will prove:—

In summer at half-past three, in winter at half-past four, the bugler blew the *réveil*, and we had to spring at full pelt from our hard beds; a draught of water and a lump of ammunition bread formed the breakfast, and then we ran off to the stables, for any one who arrived but one minute too late had his twenty-four hours' confinement to the guard-room. The stable duty lasted two full hours, and during this period we were not allowed to leave the stables for a moment. During the first four months, in spite of my rank as junker, I was obliged strictly to perform all the duties of a private. I wielded curry-comb and wisp with a zeal which often made the perspiration run down me in streams, and cleaned the little long-maned Ukraine chestnut I rode so thoroughly that even my growling captain could not discover a speck of dirt upon it. Without daring to object, I often panted through the town heavily laden with bundles of hay, or eight days' rations of oats in a sack. The most repulsive work to me was saddle cleaning; but I was obliged to do it, and I can still remember being put under three days' arrest by my captain because one of my stirrup-buckles did not shine properly. I was not allowed to keep a lad to clean my traps, but had to do it all myself; an old pay-quartermaster with whom I was quartered being my instructor, and bullying me fearfully. After stable duty was ended, we marched out, both in summer and winter, to exercise, and this lasted so long that we rarely got back to quarters before eleven o'clock. A piece of ammunition bread with a slice of sausage or cheese, according to the state of our finances, with a draught of corn-brandly from the small green flask in the sabretasche, formed our breakfast, which we took with us.

After dinner, with which meal the captain supplied the junkers for a consideration, they had to return to the stables for two hours, after which they practised at a mark with pistols and carbines, so that they were not off duty till nearly six in the evening. Equally unpleasant were the mornings passed in the riding-school. Especially when the captain was suffering from gout in the head, for he hit out with his stick right and left, not being at all particular where the blows might fall. As, however, it was not permitted to strike or in any way insult a junker, the captain had sufficient method in his madness to declare that he did not mean to hit them, which was but a poor consolation. After eight months' hard training, our hero was promoted to corporal's rank, and

had a private to clean his horse, but felt greater satisfaction at his removal to Münster, where he came under the personal command of Blücher, who had gained a great name among the troops through his behaviour in the campaign of 1793. Here is a sketch of the great general:—

His great good-temper, his simplicity and nature as well as the thorough mother-wit he always displayed, rendered General von Blücher an universal favourite of the lower and middle classes. I myself saw him spend half-an-hour in assisting a peasant whose cart had been upset, and give anybody a light or tobacco from his own pouch. He also managed to get on famously with the haughty, retiring nobility of Münster. He pretended not to notice their coldness, and was merry, unsuspecting and polite towards all the men, whom he frequently invited to dinner, and tried to warm their hearts with his Rhenish. The old Hussar general was, on such occasions, most amiable, an open-hearted soldier, and yet, at the same time, so crafty that such qualities have rarely been found united in one man. When he liked, he could spin the finest diplomatic intrigue under the mask of the most perfect simplicity, in a manner that Talleyrand might have envied. He had, too, the gift of language, especially over a glass of wine, and proposed witty improvised toasts which persons did not expect from an Hussar. When he liked, he could be very amiable to ladies of rank, and display a chivalrous and winning gallantry; still he did not like their society, as a rule, or the restraint it placed on him. Light-minded actresses and women of that class, who could stand tobacco-smoke, punch-bowls and equivocal jests, were the most agreeable company for the old soldier.

After three years' service, Fritz was promoted to a cornetcy, and did his manly *devoir* very shortly after, by a duel with a French cavalry officer, who insulted him at a small village inn where the officers of both armies were accustomed to meet. They fought on horseback, and the cornet managed to give his adversary a very magnificent slash across the face. For this exploit Fritz was sentenced to some weeks' arrest. The Frenchmen, however, were in such fury that they resolved to challenge the Cornet in turn till one managed to kill him, and Blücher got him out of the way by sending him to fetch remount horses from Warsaw. In the following year he was promoted to a lieutenantancy, and simultaneously came the order to march against the French. According to our author's showing, the Blücher Hussars were a strange composite: there were among them Poles, Mecklenburgers, Saxons, fellows belonging to the Empire, several Hungarians, and even two Tartars. The regiment was generally well mounted on wild horses from the Ukraine, or young colts purchased in Lithuania. Altogether, the chief had reason to be satisfied with his men, and expressed that satisfaction as follows:—

"Well, Hussars, it is a pleasure to see you thus, and when you come to really hammering those cursed *parlez-vous*, you will do your d—d duty," he shouted in his deep bass voice, so that all the ten squadrons could distinctly hear him. "Certainly, certainly, Excellency, we shall not fail," the Hussars shouted; and an old corporal who had served for forty years said, "This time we shall go straight into Paris, and not be so cursedly humbugged as we were in 1792."—"Yes, old boy, this time we mean going in; and when we are inside Paris we two will drink our king's health in the best champagne that is to be procured," General von Blücher said, with a laugh.—"Done, your Excellency; that is a bargain," the corporal answered, amid the laughter of all the Hussars. Well, in 1806 the regiment did not reach Paris, but in 1814 the old corporal really marched in, and went to Field-Marshal Blücher to remind him of his promise. The old chief, who was ever the real soldier's friend, greeted the corporal very kindly, drank a bottle of champagne with him, gossipped

about old times, and presented him with his own pipe.

Our author, young though he was in the field, soon saw that there was not much chance of reaching Paris this journey, for the army was fearfully cumbered with baggage-train and impediments of every description. How great the confusion grew, will be seen from the following:—

The village of Auerstädt, through which we had to pass, offered a picture of the most indescribable disorder. Infantry belonging to the most varying regiments had come together on the march, and among them were powder-carriages, led horses and the great number of useless baggage and pack animals, which blocked up most shamefully the roads along which the troops had to march. In the midst of this turmoil could be seen and heard shouting and cursing field-officers, who could hardly hold their horses in, and Adjutants, trying to force their way through and unable to succeed: the most varying orders were given by the most different persons at the full pitch of their lungs, which no one thought proper to obey, and curses as powerful as the German soldier-language of that day knew were bandied about, mingled with the yells and shouts of many Poles belonging to South Prussian regiments, who were considerably intoxicated. To this must be added the sound of the drums and fifes, the clashing of the bugles and the louder growing thunder of the cannon: in short, it was a confusion and disturbance such as I never saw or heard again in my many later campaigns.

With such a beginning, it is not surprising that the day ended in a total rout. We get many piquant sketches of Blücher dashing about the field, and hoping that a "million bushel heavy thunderweathers" might smash up the whole lot of pigs; but even he was compelled to obey the royal command to retreat:—

General Count Kalkreuth rode with General Blücher, who selected me as his orderly officer, to meet Marshal Soult, and orders were given on both sides that hostilities should cease till the interview was over. Marshal Soult behaved most coarsely and arrogantly, displayed very brutal manners, which evidenced a neglected education, and had soon so intimidated poor old Count Kalkreuth, that he once more saw his only chance of salvation in a cowardly capitulation. Looking furiously round him, and replying to the impertinence of the French officers with equal coarseness, our old General von Blücher, stood there during the entire conference, talking but little part in the conversation, which took place in French, a language he did not understand, but every now and then letting a hearty German curse pass his lips. At length Count Kalkreuth dared to propose a capitulation to him, and had the weakness to allude to the safety of Prince Augustus and His Majesty's Guards. With a glance of the most utter contempt, Blücher looked at Kalkreuth and then said aloud: "H.R.H. Prince Augustus has a great deal too much military honour in his breast to consent to such a cowardly capitulation. His Majesty's Guards are brave fellows, but are worth no more here than any other soldiers, and the devil fetch me if I, for my person, accept such a capitulation!" Count Kalkreuth, greatly abashed, turned away and continued his conversation with Marshal Soult. As Blücher repeatedly heard the word "capitulation," his patience at length gave way: he walked up to Marshal Soult and said, in German: "I trust that the gentleman will not ask anything bad of me, a soldier, who have attained my sixtieth year with honour. As an honest soldier I will let myself be cut to pieces at any moment,—but capitulate, like a coward, I cannot and will not do," and, as he said this, he dashed his sabre on the ground.

Hostilities began again at once, and the Prussians retreated in good order. Ere long, however, Prince Hohenlohe caused his division of 15,000 men to lay down their arms, and Blücher resolved to fight his way with his brigade into Mecklenburg. His ten thousand

men were at once closely pursued by three French corps under Murat, Soult, and Bernadotte. But Blücher did not care: he was ready to sacrifice his own detachment, if it would give Prussia time to get under arms again. When the troops eventually reached Lübeck, they were forced to remain there, for Blücher could not obtain shipping enough to carry out his original design of crossing by water to East Prussia. During the siege our author was dangerously wounded, but found shelter in the house of a worthy tanner, who concealed him from the French, and when he was sufficiently cured of his wounds, put him on his road to East Prussia. In the meanwhile Blücher had capitulated with the remnant of his force at Ratkau, writing under the document, "I only capitulate because I have no bread or ammunition left." When the French objected to this clause, the brave old man asked for the paper back, and declared that in that case the Prussians would defend themselves to the last man. The French were compelled to give way. On December 31, 1806, our author set out on his perilous journey, disguised as a cattle-dealer, by the stage coach, and arrived safely at Berlin. The account he gives of Athens, on the Spree, at that day is anything but refreshing:—

Never had I felt so affected by the changes that had taken place as when I saw the French behaving with such unbounded arrogance in Berlin. How unspeakably miserable too was the conduct of the whole high-born and lowly populace. All the educated circles of officials, bankers, *beaux esprits* and artists, who had formerly been so delighted, when Prince Louis Ferdinand, or any other member of the royal family honoured them with his presence, were now more Gallican than many of the French officers. The Emperor Napoleon, though he gagged Germany and trampled her under his feet, was their hero and delight; the French language was the only one fashionable—especially in the salons of the plutocracy; and the impertinence of French officers to ladies and unmarried girls was regarded as amiability and elegance of manner.

Shaking off the dust of this ungrateful city, our author made the best of his way to East Prussia. The first action he was engaged in after reporting himself at head-quarters was Prussian Eylau. After the battle was over, a very painful incident occurred to him. He came across an old school friend, lying, hopelessly wounded, on the ground, who implored him to put an end to his sufferings. After a struggle with his feelings, our author consented, and called up one of his escort, an old Pole, who blew out the wretched man's brains, with about as much compunction as if treading on a beetle. The following passage is very true, and refers to a point not so often thought of by those who read of gallant battles:—

The nocturnal ride over the battle-field had something remarkably horrible about it. All around lay dead and wounded soldiers and horses, thrown away and broken weapons, deserted carts and similar matters. Our horses shied and reared at every moment, and we could only advance at a foot-pace, through fear of being thrown. Truly heartrending were the sight and lamentations of the many hundred wounded, who lay about in heaps, with frightfully smashed limbs, and it had been as yet impossible to afford them the necessary help. The piercing cold which got into the open wounds, not only produced increased agony, but injured them so much that eventual surgical help rarely availed aught. How many shrieks I was compelled to hear, though unable to assist! how many earnest entreaties for assistance pass by unheeded! A battle-field, when the fight is raging, the guns are thundering, the bugles crashing, the drums rolling, and the earth groaning beneath the hoofs of horses, is the grandest spectacle a true man can behold; but a deserted battle-field, with its countless wounded, is, when the veil of night covers all and a piercing

north-east wind whistles over the ground, as was now the case, a fearful spot, whose overpowering effect it is not so easy to get rid of again.

This, the second great action in which our author was engaged, also terminated in a retreat; and Napoleon was consequently enabled to tell startled Europe that he had gained a victory over the allied Russians and Prussians. How little true this was, we know now; but it served the despot's purpose at the moment, for the most ardent patriots began to despair. As our author does not deal much in politics, we will pass over to his account of the Russian Army, which he had frequent opportunities of inspecting when sent with despatches to General Bennigsen. It will be seen that there was slight difference between 1807 and 1855:—

As a general rule, I found the Russian private awkward, not sufficiently independent, and in this respect far inferior to the Frenchman; but, at the same time brave, obedient to the slightest order, and possessing great endurance, which rendered him capable of great fatigue. Unfortunately, the Commissariat of the Russian Army was most irregular and defective; the poor soldiers suffered serious want of necessaries, and were often so hungry that they begged bread from the Prussians. This bad treatment caused the Lazarettos to be crowded, and desertion to prevail most extensively. I am convinced that the Russian Army in 1807 lost far more troops by neglect than by the bullets of the enemy.

The natural consequence was, that the Russians were feared by the country folk even more than the French. They would not starve, and so took to stealing food; and, of course, the pilfering did not stop there. Punishment was not of the slightest use to check the evil. Our author saw a white-bearded Cossack receive his seventy-five lashes for stealing a silver spoon, without a murmur. When the punishment was over, the Cossack shook himself like a poodle, crawled up to his Colonel, tried to kiss his hand, and asked, in a flattering tone, "But, papa, I suppose I can now keep the glittering thing, since I have received my proper dose for it?" When this was refused, he seemed to be penetrated with a sense of the injustice dealt him; but it was only for a moment: he jumped on his shaggy pony, and began chatting to his comrades as if nothing had happened.

The campaign was suddenly closed by the Treaty of Tilsit; and we must leave our Hussar for the present, hoping ere long to chronicle his victories, as we have done his reverses. Such books as this deserve special attention at the present moment; for, apart from their personal interest, the object of these publications is to keep up in the mind of Germans that detestation of the French which characterized the Great War. While we deplore, we cannot blame, the display of such a temper; for, in spite of all the efforts Prussia has made, and is still making, should hostilities break out with France, the page of history would, at the outset, record many a day as disastrous as that of Jena.

OUR LIBRARY TABLE.

The Heroine of the Greek Revolution; or, Scenes in Greece from the Year 1821-28.—[Η Ηρώς της Ελληνικής Επανάστασις, ητοι Σκηναι εν Ελλάδι, απο του Ετους 1821-28]. By Stephanos T. Xenos. (Published by the Author.)—London is, indeed, a wonderful city, where the Aladdin lamp, money, can procure you anything. This fact is no less true in literature than in other things. A French paper was once a novelty in London; but we have now a German, Spanish, Russian, and, lastly, a Romaic newspaper published in London; and the book before us is a modern Greek historical novel, written, printed and published in London. This is an interesting work for the Greek student who may wish to compare

the Greek language as now spoken in Athens with the language of Demosthenes. We can recommend it for this purpose, as it is a fair specimen of the current literature, written by a Greek gentleman now residing in London. It will be seen that the language now spoken and written in Athens and all the principal towns of Greece is essentially the same as that of the Alexandrine and Byzantine periods. Nearly all the words are the same, or spring from the same roots:—the grammar, however, is modern, much simpler than the ancient, and has the features which distinguish all modern languages. In accordance with this, the construction of the sentence is simpler and clearer than in the old language, but less imposing, charming and poetical. We have proofs of the Modern Greek language existing as such, and nearly the same as at present, before the end of the twelfth century. From that time to within fifty years ago, many words from the French, German, Italian and Turkish languages crept into the language, but took no permanent hold on it; and almost all of them have now been eliminated, and replaced by words coined from ancient roots. We give the following as specimens:—*Posta* now rejected for *ταχυδρομίου*. An hotel is now appropriately called *ξενοδοχείον* or *πανδοχείον*, a university *πανεπιστήμιον*, and the exchange the *χρηματιστήριον*. The present work treats of a period so full of stirring incident that it could scarcely fail to be interesting; and, we must say, it does not fail. The seven years of the Greek Revolution are the period; and with many readers, perhaps, it will be more popular than the great authority on the subject—the work of Tricoupes. The style of Mr. Xenos is a fair specimen of that of the writers of his day. They are all doing their best to re-erect the fabric of the ancient language, of which the modern language may be said to be the ruin. They have succeeded in saving the dative case, which was for a time lost, and are striving hard to re-introduce the old infinitive instead of the awkward construction with relative sentences. This, however, we believe, will cost them many years to bring into general use. Mr. Xenos occasionally approaches the ancient language very closely, and endeavours to give that rhetorical turn, and make use of those concise participial forms, which characterize the ancient language. In this he occasionally succeeds very well, at other times only succeeds in making the sentence dragging and obscure.

Constance Dale: a Story. By Charlotte Hardcastle. 2 vols. (Newby.)—And a very hackneyed story, too, but by no means an unpleasant version of it. Still, we cannot help feeling that we have met all the people very often before in the bright realms of fiction, and know them by heart most thoroughly. The selfish, rich man, with his nervous, peevish wife, his vain daughter and extravagant son, are regular stock novel characters. Still more so are the poor widowed curate's wife and her lovely, meek, angelic daughter. As is usual in these cases, the poor widow dies, and the lovely orphan is unwillingly received into the family of the wealthy merchant, where she bears taunts and insults and sneers as the heroine of a novel should do. However, as cousin Ferdinand is decently civil to her and thinks her pretty, she makes it her duty to fall in love with him on the spot, and to refuse very eligible offers for his sake, thereby covering herself with disgrace in the eyes of the rest of the family; and finding that the house is getting too hot to hold her, Constance Dale departs, with the laudable intention of "going out as a governess." Her friend, Theresa Arnold, who, though strong-minded, with a rather masculine affection for horses and dogs, is a very real and solid character, insists on Miss Dale remaining with her,—Ferdinand, who is sorry for his poor little cousin, but who, unfortunately, has a very bright particular star of his own, generously furnishing the wherewithal for her present maintenance. Perhaps it will be scarcely necessary to add that, the uncle being ruined and repenting of his sins, Constance instantly returns to her duties, and does everything for everybody, whereby she heaps coals of fire upon the heads of her remorseful relations. Ferdinand's star having set, or, in other words, having married somebody else, he suddenly

becomes aware that Constance would suit him quite as well, *faute de mieux*, and he accordingly loses no time in making her a very happy woman. Such is the story of 'Constance Dale.' There is nothing at all new or original in it; but the whole tone of the book is unexceptionable, and the moral at the end is excellent.

On the Hypæthron of Greek Temples: a Paper read before the Archaeological Society of Berlin, together with some Observations in reply to the Reviewers of 'Dædalus.' By Edward Falkener. (Longman & Co.)—Under the convenient name of a 'Reply,' &c. to the reviewers of his 'Dædalus,' Mr. Edward Falkener finds opportunity to be more explicit on his subject, and to make some important statements which he had hitherto omitted. Taking away the remarks thus elicited by different reviewers and his observations on the recent statues erected in London, very little matter would appear to be left to form the paper read, as mentioned on the title-page, before the Archaeological Society of Berlin. We have already [see *Athen. No. 1724*] followed his speculations with interest, and referred others to the nature of his authorities. The main novelty of his recent publication consists in two woodcuts, which are feebly executed, and which openly endeavour to convey a sting with them to a contemporary reviewer and a writer on classic Art. The first woodcut represents a Pygmy hurling a lance from behind a large shield, bearing the head of Minerva, and is inaccurately designated "SYLVAN sports, from the Sub-URBAN villa, Pompeii." The second shows a figure of Jupiter scrambling up the tiles of the roof of a temple in a manner and style of movement which none but the draughtsman ever devised, and which the circumstances he alludes to could not have in any way necessitated. With his ridicule and condemnation of the statue of Honour in Waterloo Place we fully concur, but on all other points of the book he cannot be said to have advanced his subject, or indeed to have thrown on it any really new light. His additional quotations are well to the purpose, and it is easy to understand that Mr. Falkener would gladly incorporate them as speedily as possible with that which he had already written. Why not published together in the first instance, the author himself can best judge. The question of a vertical Hypæthron seems, however, to be clearly decided; but the writer's notion of an arched roofing of wood still remains a curious and unsupported theory. The frontispiece to the 'Dædalus' Mr. Falkener explains (at page 9) as intended solely "to show the wonderful effect of the chryselephantine statues of the ancients, filling all the temple, and being, by their varied colour, in harmony with the polychromatic architecture which surrounded them." This explanation is singularly unfortunate, as the plate fails entirely in its object. The architect's intention would never be suspected, and those who look at the frontispiece are not at all impressed with the "wonderful effect" of the statue in the same sense in which the author meant it. He himself, in a subsequent passage, admits the picture to have been a failure; and we, therefore, regret that he did not, in the first instance, determine to withdraw it. Whilst transcribing Lord Byron's lines upon the Venus de' Medici, "thinking that poetry would be considered as a kind of embellishment to the book," we now learn that Mr. Falkener reproached himself all the time that he had inserted a photograph of the statue, and, in conclusion, confesses that he has nothing to say upon it.

We have on our table—new editions of Mr. Wilkie Collins's *Hide and Seek* (Low),—and Volume I. of *Cooper's Dictionary of Practical Surgery*, by S. A. Lane (Longman).—The reprints, since our last announcement, include *The History and Articles of Masonry*, now first published from a MS. in the British Museum, by Matthew Cooke (Spencer),—from the 'Encyclopedia Britannica,' *The Telescope*, by Sir John F. W. Herschel (Black),—*India-Rubber, or Caoutchouc; its Past, Present, and probable Future*, by E. T. Dunn (Wilson),—*Military Gymnastics of the French*, by A. Steinmetz (Mitchell),—*Military Instruction for the Cavalry Carbine and Pistol*, recently issued to the French Cavalry, by A. Steinmetz (Mitchell),—*Summer on the Lakes, an Autobiography*, by Margaret F. Ossoli

(Ward & Lock),—*The White Scalper*, by Gustave Aimard (Ward & Lock),—*Lord Brougham's Address at the National Association of Social Science* (Murray),—and *Government Education*, reprinted from the *Edinburgh Review* (Longman).—Amongst our newest translations we have *Alexis de Tocqueville's Memoir, Letters and Remains*, translated from the French by the Translator of 'Napoleon's Correspondence with King Joseph' (Macmillan & Co.),—and Vol. IV. of Mr. Kennedy's translation of *The Orations of Demosthenes*, has been added to Mr. Bohn's "Classical Library,"—and, into French, a first volume of Mr. Wilkie Collins's *Woman in White*, by M. E. D. Forgues (Hetzell).—Our second editions consist of Major Richards's *Cæsar, King of Syria: a Tragedy* (Longman),—Mr. Hull's *Coal Fields of Great Britain* (Stanford),—*The Queen's Isle: Chapters on the Isle of Wight, wherein Church Truths are blended with Island Beauties*, by Rosa Raine (Masters),—*The Court of Cæsar; or the Story of Burke and Hare*, by A. Leighton (Houlston & Wright),—and *The True Text of the Holy Scriptures*, by Herman Heinfetter (Heylin).—A third edition of Mr. Smith's *Book for a Rainy Day* (Bentley).—A fourth edition of Mr. Bowman's *Practical Chemistry*, edited by C. L. Bloxam, (Churchill).—A seventh edition of Dr. Taylor's *Medical Jurisprudence* (Churchill) has appeared. —A few miscellanies which defy classification may be handed over to the reader in a batch:—*Our Whole Country; or, Past and Present of the United States*, by J. W. Barber and H. Howe (Trübner),—*Panini, his Place in Sanskrit Literature: an Investigation of some Literary and Chronological Questions which may be settled by a Study of his Works*, by Theodor Goldstücker (Trübner),—*Notes on Shoeing Horses*, by Lieut.-Col. Fitzwygram (Smith, Elder & Co.),—Volume XIX. of Thiers' *History of the Consulate and the Empire* (Willis & Sotheman),—*A New Bibliotheca Piscatoria; or, General Catalogue of Angling and Fishing Literature* (Field Office),—Parts I. to IV. of *The Rebellion Record: a Diary of American Events*, edited by Frank Moore (Trübner),—*M. Didot's Mss. de Jacques Juvénal des Ursins, cédé à la Ville de Paris* (Didot),—third and fourth volumes of the short-hand writer's notes of the *Speeches on the Trial of Warren Hastings*, edited by E. A. Bond, of the British Museum (Longman),—Volume V. of the Rev. Dr. Wardlaw's *Posthumous Works*, edited by his son, the Rev. J. S. Wardlaw (Fullarton & Co.), and *The Britannia Almanac for the Past and Future*, by T. B. Cook (Stanford).

LIST OF NEW BOOKS.

- Acts, Public General, 34 & 35 Vict., 1861, 8vo. 4s. 6d. swd.
Balfour's Drift: a Story of Walls and Strays, 18mo. 1s. swd.
Bayley's Handbook of the Slide Rule, 18mo. 6s. cl.
Beale or the Simple Times of the Human Mind, 8vo. 7s. 6d. cl.
Bickersteth, Frances and Elizabeth, Memorials of, 13th edit., 3s. 6d.
Cabinet Pictures from Modern Painters, folio, 12s. bds.
Clarke's Acts and Writings of the Apostles, Vol. 1, cr. 8vo. 7s. 6d. cl.
Clarke's Comment on O. & N. Test., new edit. Vol. 4, 10s. 6d. cl.
Clarke's Strange Story through Birmingham, 8vo. 1s. swd.
Coppinger's Home at Rosefield, 3 vols., cr. 8vo. 31s. 6d. cl.
Denison's Church Rate a National Trust, new edit. 8vo. 5s. cl.
De Porquet's Le Trésor de l'Écuyer Français, 29th edit. 12mo. 2s. 6d.
De Presenac's Rosa: a Story for Girls, by Mrs. Fletcher, 3s. cl.
English Sacred Poetry, selected by William Lisle, 4to. 21s. cl. gilt.
Family Say-all, 2nd edit. cr. 8vo. 2s. 6d. cl.
Farrar's Eric: or, Little by Little, 5th edit. fr. 8vo. 5s. cl.
Francatelli's Cook's Guide, 2nd edit. cr. 8vo. 5s. cl.
Glover's England, the Remnant of Judah, 8vo. 6s. 6d. cl.
Guizot, L'Église et la Société Chrétienne en 1861, 8vo. 5s. swd.
Gurney's Restoration; or, Completion of Reformation, 8vo. 2s. swd.
Hazlitt and Roache's General Orders in Bankruptcy, 1861, 2s. swd.
Horace's Art of Poetry, literally transl. by Robinson, fr. 8vo. 2s.
House's Missionary in Many Lands, 12mo. 3s. 6d. cl.
Hullett's The True Light, and other Sermons, cr. 8vo. 5s. cl.
Hymns for all Seasons, 18mo. 1s. 6d. cl.
Jaques's The Gospel the only true Foundation of Morality, 7s. 6d.
Lewis's Bankruptcy Manual, 4th edit. with Rules & Orders, 1s. 6d.
Maddock's Pulmonary Consumption, &c. 10th edit. 8vo. 3s. 6d. cl.
Milton's Prophecy of 'Essays and Reviews,' 8vo. 1s. swd.
Moore's Manual of the Diseases of India, fr. 8vo. 5s. cl.
Morton's New Farmer's Almanac, 1862, 12mo. 1s. swd.
Old Manor's Heir, cr. 8vo. 10s. 6d. cl.
Perry's Contributions to an Amateur Magazine, 2nd ed. 8s. 6d. cl.
Piercy & Hatt's Law relating to Bankruptcy, 3rd edit. 1s. 6d. cl.
Pierour 14th, 'Olive,' new edit. fr. 8vo. 3s. bds.
Price's God's Dealings with his Church: Sermons, 12mo. 2s. c.
Rank and Talent of the Time: Contemporary Biography, 6s. cl.
Ruff's Guide to the Turf, Autumn Edition, 1861, 12mo. 1s. 6d. cl.
Routledge's Riddles and Jokes, fr. 8vo. 1s. bds.
Smith's Pilgrim's Staff, new edit. 2 vols. 12mo. each 5s. cl.
Siege and History of Londonderry, ed. by Hampton, 4s. 6d. cl.
Sal's Dutch Pictures, with Sketches in the Flemish Manner, 5s.
Swinhoe's Narrative of the North China Campaign of 1860, 12s. cl.
Smollett's Humphry Clinker, cheap edit. 12mo. 2s. bds.
Stanford's Joseph Alleine, his Companions and Times, 7s. 6d. cl.
Soyer's Modern Housewife, new edit. cr. 8vo. 7s. 6d. cl.
Test., Gr. Webster & Wilkinson, V. 2. Epistles & Apocalypses, 34s.
Trotter's Designs for Sepulchral Monuments, new ed. folio, 30s. cl.
Taylor's Spirit of the Hebrew Poetry, 8vo. 10s. 6d. cl.
Useful Library, Holdsworth's Law of Bankruptcy, fr. 8vo. 1s. bds.
Woman's Service on the Lord's Day, 2nd edit. fr. 8vo. 3s. 6d. cl.
Why Paul Ferroll Killed his Wife, new edit. post 8vo. 5s. cl.
Wall's Artistic Colouring as Applied to Photographs, cr. 8vo. 6s. 6d.
Wood's Natural History Picture Book, Birds, &c. 6s. cl.

[ADVERTISEMENT.]—AUTOGRAPH, &c. OF JONATHAN WILD.—SOUTHGATE & BARRETT, 22 Fleet Street, will SELL BY AUCTION, on WEDNESDAY NEXT, an Original Petition of Jonathan Wild's to the Lords of the Treasury, praying for payment of the sum of 100*l.*, for apprehending one John Allen, convicted of robbing Dr. Wasey. Also, an original Treasury Order, for the payment to Wild of 100*l.*, for apprehending the Footpads who fired upon Thomas Micklethwaite, Esq., and the night following murdered Mrs. Mary Knapp, with Wild's receipt on the back thereof for the sum in question. Also, the extremely rare print, from the Strawberry Hill Collection, entitled, 'The Thief-taker taken; or, Jonathan Unvelled.' Upwards of two hundred volumes of Reports of Criminal Trials, Lives and Careers of Notorious Criminals, scarce Pamphlets, rare Broad-sides, and singular cuttings from Old Newspapers (the whole illustrated with upwards of one thousand scarce and curious Engravings), are included in the same Sale.—Catalogues are now ready.

CRIMINAL TRIALS.—A curious and unique Collection, embracing Reports of Criminal Trials. Lives and Careers of Notorious Criminals, scarce Pamphlets, Dying Speeches and Confessions, Autographs, Fac-similes, &c., with upwards of one thousand rare Prints illustrative of Crime in Great Britain during the past two hundred years, will be SOLD BY AUCTION, by Messrs. SOUTHGATE & BARRETT, 22, Fleet Street, on WEDNESDAY NEXT.—Catalogues are now ready.

HORTICULTURAL GARDENS, SOUTH KENSINGTON.

SINCE our last account of the works progressing at the Horticultural Gardens, South Kensington, much has been done towards their completion which develops the general plan, and the system of decoration to be employed upon it, so that the appearance of the whole is considerably enhanced. The arcades on the western side have had large sheets of glass inserted into the inner of the coupled shaftings that divide them and abut upon the piers. These are judiciously inserted on the inner shafts so as not to destroy the effect of duplication as seen from without, nor to break up the look of depth in the arcade itself. We think it would have been a still better plan to have placed the glass within, and entirely detached from the terra-cotta shafts, so that their shadows and force of character should not have been affected in any way. Vases have been placed at intervals along the lower path leading to the great central avenue; and at the intersection of these ways stands a great vase to be replaced at some future time, we hope, by a single-jet fountain rising clear from a low basin, like that in the Temple, the only really tasteful fountain in London. Such a jet as this would cost but a trifle, and give a look of sparkling life not now to be found in the lower portion of the gardens. As yet, the arcade to the south, that abutting on the International Exhibition building, is unglazed; this will be surmounted by the dining-rooms belonging to the Exhibition,—a site affording a view over the whole grounds of the Horticultural Society. New beds and rich turf have been laid throughout the gardens; the beauty of the grass, with its wonderfully deep verdure, is deliciously refreshing to the eye. As well as the season will allow, and far beyond expectation, the beds themselves bloom with lovely hues, harmoniously graded. The embroidery beds rather disappoint our expectations of their success in the way of colour, although it is more than probable that a certain ashy lowness of tint they exhibit may be but the effect of contrast with the intensely warm depth of the verdure on the plats and the glacies. When winter shall have reduced this, and the embroidery beds are seen in the position for which they have been designed, no doubt they will do justice to the expectations formed on account of their construction, novelty and purpose.

Against the northern angles of these triangular beds, and at the point of intersection of the central cross-walk with the central promenade, vases are placed, which are singularly poor in design, and totally different in merit from those which appear on the upper terraces. At the east end of the central cross-walk two of the statues of Victory, by Rauch, appear. These are probably the artist's finest works, and, indeed, are amongst the most admirable of modern sculptures. Placed as they are in these gardens, their effect is surprisingly beautiful. They have been presented to the Horticultural Society by the Prince Consort, and were expressly cast in bronze, by permission of the King of Prussia, from the models made for him by the

famous sculptor. The west end of the same walk will be, we believe, adorned with similar statues, also the gift of Prince Albert, of Victory, of diverse design, however. The bridges traversing the canals on either side of the gardens have, of course, been completed some months since. The upper portion of the eastern arcade, designed by Mr. S. Smirke, based upon examples of Milanese *quattro-cento* brick work, remains much as it did. The costly process of carving the stone caps of the piers in this arcade has ceased, the single example executed being so exceedingly tame as to be artistically useless and of no characteristic value.

The northern arcade, whose curving horns inclose the upper portion of the gardens, has been carried out very successfully, upon the design of Mr. S. Smirke, after the arcade of the Villa Albani at Rome. On the west side, an experimental frieze has been introduced above one of the arches, with very questionable advantage, we think, because the design is tame and rather vulgar, and the colour coarse. In far better taste are the spandrels below this, where a similar experiment has been made; that to the north, showing boys amongst foliage, is excellent. The sides of the great central cascade tank have been constructed, as well as the basins above it, over which, and beneath the pedestal of the sculptured Memorial of the Great Exhibition of 1851, the water will pour in a grand torrent. The pedestal in question is also complete; it is four-square, having in each of its faces a basin and bold jet of water. The Memorial it is to sustain consists of statues of each quarter of the globe, surrounding one of Her Majesty. The band-houses on the upper terraces are progressing rapidly, and display much elegance of design. These are the work of Capt. Fowke, as also are the Council Chamber, the lower east and south arcades, and the conservatory. The last is truly a charming place, lofty, graceful and bold; its interior is by far the most beautiful of the like in this country. This work may be said to be now complete. It has been already described in the *Athenæum*: since when the introduction of the plants has given expression and colour to it. We regret to notice that zinc roofs are being placed on the band-house, believing, as we do, that copper, the colour of whose oxidated surface is so very lovely, would be preferable. The zinc looks dull, heavy and cold, and will get blackish.

MR. DU CHAILLU AND HIS ADVENTURE WITH A GORILLA.

Walton Hall, October 14, 1861.

IN my history of the monkey family (see 3rd volume of 'Essays,' Longman) I have shown that these interesting animals are inhabitants of the trees, and not of the ground. I have maintained that in trees alone they find subsistence. In trees they wander perfectly secure; and in trees they take their ordinary rest.

Let me remark here (notwithstanding what anatomists may teach to the contrary), that the Gorilla and every other ape have received their long and brawny forelegs, not for offensive or defensive measures, but solely, like the sloth, to enable them to pass from branch to branch with a rapidity like unto that of an arrow from the hunter's bow,—their hinder legs acting as mere props in the transit. Anatomists ought to know that the Gorilla, being an ape, has *non-retractile claws*; so that it never attacks its foe, or defends itself, with the forefeet, but invariably with the mouth. Wherefore, I condemn unhesitatingly Mr. Du Chaillu's description of a Gorilla giving the negro a "tremendous blow with its immense open paw."

Long ago, Buffon pronounced the sloth to be a "bungled composition of Nature," and his followers held the same opinion up to the early part of the present century, when, in the year 1812, I went in search of the sloth through the wilds of Guiana. There, after numberless experiments, I clearly saw that, on the ground, it appeared certainly a "bungled composition," but that, in the trees, its real contour and its activity were surprisingly attractive. But to the Gorilla.—Mr. Du Chaillu informs us that the Gorilla met its adversary face to face, and "used its arms, as weapons of defence, just as a man or prize-fighter would." Will Mr.

Du Chaillu inform us what became of the "huge superimpendent" body of the Gorilla, when its slender and tottering legs were deprived of the aid which they received from the long arms, before it had put itself in the attitude of "a man or of a prize-fighter"? "Its short and slender legs are not able firmly to sustain the vast body," says Mr. Du Chaillu. Again, the "long arms are used in a clumsy way to balance the body and keep up the ill-sustained equilibrium." An honest answer to these queries would be "*Procumbit humi bos*"—the beast must naturally be floored.

CHARLES WATERTON.

NOTES ON THE HISTORY OF PERSPECTIVE. (No. II.)

October 16, 1861.

A few words on the principle of Perspective may give me more readers. When, keeping the eye steadily at one point before a glass plate, we note how the distant objects beyond appear to be thrown upon the glass, it will be obvious that any given length of line cuts a smaller figure on the glass the further off it is removed. If two parallel lines be drawn side by side, directly away from the picture, say always three feet apart, and if a three-foot line travel between the two, the appearance of this three-foot line will become less and less, until it is not distinguishable from a point: that is, the pictures of the parallels will appear to meet. In strict geometry, the three-foot line must recede *ad infinitum* before it becomes only a point on the picture. If other lines be drawn parallel to those already supposed, their representations on the picture will also converge towards the point of meeting already noticed. And this point is the one directly opposite to the eye: it is called the *vanishing point* of all lines which go directly away from the picture, or are perpendicular to the picture. The unpractised reader must endeavour to remember that the plate of glass which I have called the picture is not a small piece in a frame, but extends upwards and downwards and sideways without end. We thus get the one vanishing point of Agatharchus, which might take the name of its founder, for it was the head of a good system. It is often called the *point of sight*, a phrase which more properly belongs to the position of the eye: the *centre* of the picture is, I think, the best of its names, if *agatharch* will not do. Some distinction is wanted, for, since Brook Taylor, *every* line in the picture has its centre. Every other set of parallels has also its vanishing point, except only when the lines are parallel to the picture as well as to one another. And the rule for determining vanishing points is as follows:—Draw a line through the eye-point parallel to any system of parallel lines, and the point in which this line cuts the picture is the vanishing point required. Parallel lines which are parallel to the picture are represented by parallels on the picture. Next after the point of sight in importance, are what are called the *points of distance*, distant from the point of sight on one side and the other by as much as the distance of the eye from the picture: these are the vanishing points of all lines halfway between perpendicular and parallel to the picture.

Agatharchus started a vanishing point: but the proverb *Ce n'est que le premier pas qui coûte* was not verified. We must come to the beginning of the sixteenth century before we can prove the publication of a second vanishing point. Our materials for the fifteenth century are very imperfect. We are told of Squarcione, who had hundreds of pupils, and taught—we are not told what, except that it was *Perspective*. We hear of Pietro della Francesca, commonly called—even by Italians—Pietro di Borgo, because he was *de Burgo Sancti Sepulchri*: his pupil, Lucas Pacioli, of whom more presently, was Di Borgo for the same reason. It is stated that this Pietro wrote three books on Perspective: but the work is lost. Tiraboschi says that he was well versed in Euclid, and especially in the regular solids, of which Pacioli stole his *writings* and published them as his own. I find that Tiraboschi has here got hold by the wrong end of a story told by Egnazio Danti, in his commentary on Vignola. Danti says that Peter di Borgo, Da Vinci, and others whom he names, drew the regular solids in

perspective, and that Lucas di Borgo (Pacioli) published these drawings as his own. This means, for our comfort, that there were careless people among our predecessors as well as among ourselves: for if Danti had looked at the preface of the book which has the drawings, he would have found that Pacioli announces them as the work of his friend Leonardo da Vinci. There is some hope of recovering the writings of Della Francesca. Vasari states that they were at Urbino: Prof. Veratti of Modena (*Matem. Ital.* Modena, 1860) says they were lodged in the Vatican library; I have been told of a copy in the library of Paris. Veratti adds, that their author died about 1482; and that he was a painter until he grew blind, when he took to geometry and perspective. Such is the sort of information which is current about Perspective in Italy in the fifteenth century, where practice was making good progress. Any amount of enlargement of means may have been made by one or another without publication; but there is strong negative presumption deducible in the following way.

First, that little encyclopædia of many editions, by Reisch, which is called the 'Margarita Philosophica,' though quite ready, as we shall see, to grasp at the means of diffusing information on the subject, has nothing at all on Perspective up to about 1508. Secondly, the two great mathematician-painters, Leonardo da Vinci (died 1519) and Albert Dürer (died 1528) cannot be proved to have had any perspective of more than one vanishing point.

Da Vinci was, by universal consent, a great master of perspective. But the production of very finished specimens of graphical art was the possibility of his time as much as of any other. The first-class draughtsman managed, in one way or another, to do all that could be done: the difference between one period and another lies in the facility of the mode of doing it. Da Vinci wrote on Perspective: the collection of fragments which goes by the name of his work 'Della Pittura' contains many references to his work on our subject; of which it is conjectured that manuscripts are still in existence. Venturi says that Cellini, by his own account, had a manuscript in his possession, and lent it to Serlio, presently mentioned, who published as much of it as he could understand. This statement is void by indefiniteness. Moreover Danti, above mentioned, makes Serlio steal from Peruzzi of Sienna, whom he makes to take his methods fairly from Pietro di Borgo. That this Serlio was a thief is repeated by a score; everything is settled except whether he robbed Peruzzi or Da Vinci. In 'The School for Scandal' Sir Peter walks in, a sound man, at the very moment when the whole difficulty is reduced to whether he had just been wounded by sword or by pistol: and further examination may possibly give a similar ending in the present case. Some make him rob both, for safety. At the very time of writing I chance to light upon one instance of the growth of a story. Bayle has it that Budeus stole three hours for study on his wedding-day; Dibdin has got it up to his complaining that he could not get more than six. What I have to do with the accusation is to remark that these and various other charges of appropriation show that there was a strong—and most likely a just—impression of the existence of a great deal of unpublished knowledge.

I believe that there is not in existence any proof of Da Vinci's skill over and above what he showed in his paintings and remaining drawings, except the geometrical plates which he drew for the 'Divina Proportione' of his friend Lucas Pacioli, published in 1509. These are fifty-nine perspective drawings of solids, both *solida* and *vacua*; the second term means drawn with solid bar-edges instead of closed faces. Throughout the sixteenth century it seems to have been considered a triumph of art to represent complicated solids, with a pyramid on each face. Thus Da Vinci gives an icosahedron, a figure inclosed by twenty triangles, in which each triangle is then made the base of an outlying pyramid: and he gives a number of prickly polyhedrons of this kind. Nothing harder could well be proposed to be accurately represented;

especially when the solid was to be formed of bar-edges, so that the back is partially visible through the front. Barbaro, to whom we shall come, also delights in this kind of exhibition, which shows how much beyond their neighbours the Italians carried actual performance. I further notice that the word *perspective* does not yet appear in its modern sense: when Pacioli mentions Da Vinci's plates, he says that his purpose in publishing them is "quod optices instructionem reddere possent." *Optics*, then, is his technical word for what we call perspective. *Scenography* was a common name; it is derived from the first book of Vitruvius, who describes it as "frontis et laterum abscedentium adumbratio, ad circinque centrum omnium linearum responsus." The word *adumbratio* also became common enough, in the sense of a perspective drawing: this is a word attributed to Samuel Johnson, who always got credit for invention when, as not seldom happened, he produced something out of the limbo of oblivion.

While examining the 'Divina Proportione,' I thought I collected some evidence as to the date of death of its author, which date has never been given; an omission rather disrespectful to the first printed writer on algebra. Libri says that he never found Pacioli spoken of as living after 1509, the very date of the work. All copies, it is known, want the plate containing the letter Z, in the collection presently mentioned. And whereas there ought, according to the printed text of the work, to be sixty-one plates of geometrical solids, no copy is mentioned which has more than fifty-nine; and, which is more to the purpose, the plate following LVIII, being that which the table of contents shows to be LIX, is numbered LXI, as if the engraver had known there should be 61 plates, and had put that number on the last which came into his hands. This seems to point to a suspicion that the author died just while the work was being completed. The other books of Pacioli are beautifully finished in all that relates to printing. Now when an author completes the typography of two great works in the best style, and shows deficiency only at the very end of a third, after which he is never heard of again, justice to his memory—for he really must be dead by this time—seems to demand that his winding-sheet shall be held and taken to be the first leaf on which carelessness is made manifest.

Further still, the title-leaf, the last printed, has a curious circumstance about it. To say nothing of the second side—or *verso*—not having been well locked up, as the printers say, a thing unseen in the work, it contains a *sonetto del auctore*, in company with verses by another person in the usual way. Now it was very uncommon for an author to contribute his own verses to a part of the work sacred to the eulogies of his friends; besides which, Pacioli was not likely to make himself nothing but *auctore*. We do not catch him, like Fergus Mac Ivor, without his tail. Three times in this very work, before the reader gets near the divine proportion—which, by the way, is Euclid's extreme and mean ratio—does this same *auctore* set himself forth as "Frater Lucas Pacioli ex Burgo Sancti Sepulchri, Ordinis Minorum, et Sacre Theologie Professor." Both the sonnet and its heading are strongly indicative of the superintendence having changed hands. *Auctore*, indeed! And the sonnet itself, when examined, turns out to be an indifferent translation into Italian of the Latin verses of a friend, which are given on the opposite part of the page. This completes a reasonable proof. It is quite incredible that Pacioli should have printed as a sonnet of his own a translation of verses which stand before the eye of the reader as from another person. But if, after his death and the delay consequent upon it, some incompetent executor had happened to find, with the Latin, an attempt at Italian translation with which the author—or some one else, it may be—had amused himself, all that is seen is likely enough to have been the consequence.

We now come to Albert Dürer, celebrated not only for his perspective, but for the effect of his shading. Erasmus, in his dialogue on pronunciation, says:—

"At Apelles coloribus licet paucioribus minusque

ambitiosis, tamen coloribus adjuvabatur. Durerus quamquam et alias admirandus, in monochromatis, hoc est, nigris lineis, quid non exprimat? umbras, lumen, splendorem, eminentias, depressiones. * * Hæc fortissimè illis itaque nigris sic ponit ob oculos, ut al colorum illius, injudam facies operi."

There are abundant specimens of this power of drawing in the British Museum. There is a vignette of cows and sheep in the work I presently name, which seems intended to contrast with the necessary stiffness of the geometrical designs.

It is asserted again and again that Albert Dürer wrote on Perspective, and that his work was published. The cataloguers, as Lipenius, Watt, &c. mention a work with perspective in the title; but I have never found any other trace of it. Other writers—especially the Jesuit, a very good authority,—allude to the *Institutiones Geometricæ* as the work in question, and this seems to be the only pretext; perhaps the work of one *Ulrecht*, published after 1600, helped the confusion. The other works of Dürer can hardly be in question.

Dürer wrote his works in German: the Latin editions were given after his death. I do not know the German date of these *Institutiones*: Latin editions were published in 1532, 1535, 1606; the last of which I use. To say there is nothing about perspective in this work would not be true. There are fourteen folio pages on the construction of the shadow of a cube, in which only one vanishing point is used. There are also descriptions of two machines for explaining perspective, which have often been mentioned with high praise as actual drawing contrivances: an artist would find some difficulty with either, for anything beyond lecture-room illustration. The first is a glass plate, with a stick in front, at the top of which the eye is to be placed. The artist then paints with a brush upon the glass, if the gentleman who is sitting for his portrait, with the glass between the artist and himself, should hold himself quite steady while he is being painted out of the artist's sight feature by feature: should he be restless, he will get as many noses as in a multiplying glass. In the other machine the picture works in hinges about one side of the frame. The picture being turned aside, an accomplice adjusts a thread, which acts a ray of light, to the point to be laid down: the other end of this thread has a weight by which it hangs down, passing over a hook or pulley at the eye-point. The artist, with another thread, manages to hit the point at which the ray-thread passes through what is to be the plane of the picture. This being done, the ray is dismissed, the picture turned back into its place, and the point laid down. This contrivance got a name: it was Dürer's *portula optica*. These ingenious illustrations have been made ridiculous by those who have gravely treated them as executive instruments. The fame of Albert Dürer in perspective must rest on his pictures and his drawings.

At the same time, the disposition to exalt such mechanical contrivances as those above described—not to speak of others by Egnaio Danti, Marolois, Scheiner, Schott, &c.—into instruments of art shows a very low state of working power, such as may well be imagined to have existed in the great bulk of draughtsmen, who had not much resource of thought to eke out their single vanishing point. And I may add that the brightness which has been reflected upon the period from the fame of Dürer and Da Vinci is a kind of false light, very common in the history of science, in which the carriage is frequently painted abreast of the horses, and the statistics of the crops are referred to the seed-time.

Both Dürer and Da Vinci give their notions as to the proper forms of printed letters, and their relations to a standard square in which they are drawn. These designs have made both the 'Divina Proportione' and the 'Institutiones Geometricæ' objects of interest to the curious in typography, especially the first, which is regarded by auctioneers and collectors rather as a typographical than as a mathematical work, as appears by the descriptions which are given of it and the prices which it commands.

It thus appears that we cannot obtain any proof that a second vanishing point was brought into the picture before the beginning of the sixteenth

century; though two highly cultivated geometers, who were also first-class artists, had turned their energies upon the subject.

Further, I have much reason to doubt whether any book on Perspective was printed before the year 1505. This much I am prepared to say, that it is incumbent on any affirmant that he should state where the book is to be seen. Up to the date just mentioned, *perspectiva* means no more than optics—or rather no less—in every case in which my access to books enables me to identify the meaning. In many cases this meaning almost speaks for itself, by comparison with the rest of the title of the work. The scientific reader may find a body of statements about books in Murhard's 'Litt. der Mathem. Wissensch.,' vol. v. p. 191, and in Kästner's 'Gesch. der Mathem.,' vol. ii. pp. 1-34. I give him the longest I know of. But he will find nothing, or next to nothing, about the distinctions of method between one book and another, and an unending confusion of details. Having seen a reference to Fludd's 'Utriusque Cosmi Historia' on the history of this subject, I turned to the page cited and found nothing about it. But on turning over the leaves I was struck by a diagram consisting of a perfectly black square of about five inches by five, with "et sic ad infinitum," printed along each side. This was the heading of a chapter "De vacuo et tenebris." I can hardly suppose that this was the reference intended; but certainly, of all the pages I examined, it looked most like the history of Perspective as I usually find it elsewhere.

A. DE MORGAN.

FOREIGN CORRESPONDENCE.

Vienna, October 9, 1861.

THE streets of Vienna are now exhibiting a rather picturesque appearance, in consequence of the various national costumes which the representatives of the heterogeneous masses composing Austria have thought it advisable to assume, and walk about in, like so many living protests against the unity of the empire. The decomposing elements peep out where least expected, and their immediate effect upon literature, art and sciences is rather serious. In Hungary and Bohemia several periodicals and Transactions of Societies hitherto published in the German language have been suspended, without their place being occupied by others written in pure Hungarian or Bohemian. At Prague there is also a movement on foot in favour of establishing a national theatre, in which the Bohemian language will be used, and the entire expenses of which will be borne by the State. The Viennese are rather low-spirited about all these and other decentralizing tendencies, and endeavour to derive consolation from the numerous new buildings now rising between the former suburbs and the old city wall, regarding them as a proof of increasing faith in the stability of the empire. But they forget that Vienna has been so overcrowded that, probably, the building trade would have flourished quite as much under the old régime, if the obstructions had been removed sooner. And, after all, such additions as these are made to London every year without exciting more than passing attention. None of the new buildings seem to recommend themselves by any other feature than their great height, and by the pity they inspire for those poor creatures who will have to live in the sixth and seventh stories.

Richard Wagner is still here, trying to bring out his 'Tristan'; but Madame Dustmann does not seem to cherish the duty devolving upon her as *prima donna* in this new addition to the music of the future, of which it is said that it soon renders a fair voice a thing of the past. Wagner has made considerable progress in his Trilogy of the 'Nibelungen,' to be performed, if the singers do not break down, on three successive nights. At one of the minor theatres crowded houses are drawn by 'A Voyage around the World,'—to which the late circumnavigation of the Novara has furnished its chief materials. The drop-scene on this occasion is a large map of the world on Mercator's projection, and the scenery, copied from sketches taken on the spot, is justly admired. A virgin forest in New Zealand, in which one of the natives brought home

by Dr. Hochstetter is introduced, must be regarded as a triumph of scenic painting. At the Burg Theatre I witnessed a successful performance of 'Much Ado about Nothing,' in which M. and Madame Gabillion took the leading characters. Negotiations are now on foot about a series of German performances in London during the Great Exhibition in 1862, and several of the best artists are spoken of as secured for that occasion.

Shakspeare literature has lately received several additions. Bodenstedt, of Munich, has finished a version of the Sonnets, which it is thought will be as successful as his 'Songs of Mirza Schafy,' which have gone through nine editions in Germany, and have even found admirers in the rather indifferent English dress in which they were introduced to the British public. The dissertation by which the Sonnets were accompanied will be read with some interest. M. Bodenstedt has seen reason to change the usually received arrangement of the verses; and he endeavours to justify this step by advancing a theory which he conceives to explain the real drift and meaning of those poems. He rejects altogether 'The Key to Shakspeare's Sonnets,' lately published by Barnetorff, and ridicules the notion, advanced by the latter, that the dedication to "Mr. W. H." means to "Mr. William Himself."

German newspapers have derived considerable merriment from the so-called 'Livre des Sauvages,' supposed to be a 'Manuscript pictographique Américain,' and published at Paris by order of the French Government. It consists of 228 plates, representing fac-similes of a supposed history of an American tribe of Indians, to which the Abbé Em. Domenech has written a learned introduction and explanation. It now turns out to be nothing more or less than a copy-book of a German boy who lived somewhere in the backwoods of America, and who here made his first attempts at drawing and writing. It took some time before the French could be persuaded of this fact; and since they have been undeceived, they are making every effort to call in and buy up the copies, in consequence of which the price of this literary curiosity has rather increased than decreased. Dr. Petzholdt's pamphlet, 'Das Buch der Wilden,' in which specimens of the original are given, has tended much to confirm the idea previously entertained about the real nature of this French publication. People could not imagine that a person of such limited knowledge of languages as Abbé Domenech has shown himself to be, should have had the assurance to come before the public as an illustrator of American picture-writing. The boy-author has merely attempted to draw the most common objects, and to render their being mistaken impossible, he has, in most instances, written their names underneath. Judging from the introduction of certain figures, he must either have lived amongst Roman Catholics or been one himself; whilst the gross obscenities by which his book is disgraced show him to be a child of unusually corrupted mind. Under such circumstances, we will rejoice in a figure representing a child receiving a sound castigation from the hands of a person with something like two horns on his head. Let us hope that this old gentleman may be no one worse than the boy's father conferring upon the author the punishment he so richly deserves.

B. S.

* * It is due to the Abbé Domenech to state that he has advertised his intention of publishing a letter which will prove, he says, the authenticity of the manuscript of the work above alluded to. The publication is delayed, in consequence of the time required for the engraving of the plates, "analogous," the Abbé writes, "to those in the 'Livre des Sauvages.'"

OUR WEEKLY GOSSIP.

THE literary executors of the late Lady Morgan have arranged, conformably with the wishes of the deceased lady, that Miss Jewsbury shall prepare her letters and journals for the press. About a volume of Autobiography exists in the composition of Lady Morgan, ready for the printer. There are also journals and note-books, copiously kept, for many years subsequent to the period at which

the regular composition breaks off. The letters are extremely numerous, and comprise a cycle of secret history. Among Lady Morgan's most intimate friends were Lady Caroline Lamb and Madame Patterson-Bonaparte,—and the correspondence of these celebrated beauties is said to be in the highest degree piquant and attractive.

Lord Auckland, the Bishop of Bath and Wells, is preparing for the public a second selection from the Eden Papers.

Mr. John Hullah is preparing for publication 'The History of Modern Music.'

The new works in preparation by Messrs. Parker, Son & Bourn include—'A Historical Survey of the Astronomy of the Ancients,' by Sir G. C. Lewis,—'Christian Names: their History and Derivation,' by the Author of 'The Hair of Redclyffe,'—'On the Study of Character, including an Estimate of Phrenology,' by Alexander Bain,—the Second Volume of 'The Greek Testament,' by W. Webster, M.A., and W. F. Wilkinson, M.A.,—and 'Town and Country Sermons,' by the Rev. Charles Kingsley.

Messrs. Blackwood & Son announce a 'History of the Greek Revolution,' by George Finlay,—'Norman Sinclair,' by Prof. W. E. Aytoun,—'The Christian Life,' by Dean Ramsay,—and 'Notes on Italian Industry,' by a Levantine Commissioner.

Mr. George Grubb has in the press a large work on the 'Ecclesiastical History of Scotland from the Introduction of Christianity to the Present Time.' This work will be published by Messrs. Edmonston & Douglas.

Dr. Steere's edition of Bishop Butler's works, will contain some as yet unprinted matter. Bell & Daldy, the publishers, also announce for immediate appearance, the 'Complete Works of Spenser, with Life, Notes and Glossary,' edited by J. P. Collier.

Messrs. Tinsley Brothers announce for December a reprint of Mr. Sala's story, 'The Seven Sons of Mammon,'—also, 'The Self-Divorced; or, the School for Wives,' by Capt. Curling.

New Place, Stratford-on-Avon, is for peremptory sale, on the 25th inst., Friday next. The bill announcing the sale is a curiosity, for it contains no declaration that within New Place are comprised the gardens of Shakspeare, the Holy Land of English literature. There is no sentiment about the advertiser, and there is no time for any on the part of the public, if they would rescue the old home of the honeysuckle and the eglantine, and a locality rich in sacred memories of the Poet, from profanation, nay, from obliteration. If the moneyed and right-minded public do not interfere, and purchase the ground in order to preserve it, the gardens will disappear. Remember, that here Shakspeare lived for a score of years, the last twenty of his life, and here died. Some 1,500*l.* it is calculated might purchase it all. If individuals are unprepared, however willing, to come forward, can Government do nothing? Fifty F.S.A.'s might meet in the Athenæum Club Library and do it all at once, at 30*l.* a-piece; about the compounding fee which purchases enrolment, after election to membership in the Society of Antiquaries. The Garrick Club, we hope, will be fired with jealousy at such an idea, and step in and secure the shrine now in such imminent peril. It would seem to be their peculiar and appropriate privilege, and they might do themselves this great honour at a less cost than it would be civil perhaps to name to such well-to-do people, whose reverence for Shakspeare is not to be doubted. But the decision must be speedily made; yet is there no lack of time, whereby to excuse any man who may afterwards regret his lukewarmness of action. Meanwhile, our readers may not be unwilling to know how the spot is described where the Poet lived so long and died in such honour. Thus runs the description, by direction of the mortgagor:—"The house and premises are situate in Chapel Street, in the borough of Stratford-upon-Avon, with a frontage of 84 feet in Chapel Street, and 214 feet in Chapel Lane, and consist of dining and drawing rooms, entrance hall, surgeries, seven bed-rooms, three dressing-rooms, bath-room, kitchens, good cellars and all necessary out-offices,

with extensive pleasure and kitchen gardens, aviary, coach-house, three-stall stable, piggeries, &c. The above forms a convenient and highly-desirable residence for a private family, or a professional gentleman, and also presents an unusual opportunity for capitalists, builders and others, on account of its extensive frontage in the centre of the town." Fancy capitalists and builders coming on the spot where Shakespeare walked, and thought, and talked, and smiled, and suffered, and passed away among his friends and flowers!

The public generally, and the engineering profession especially, will regret to hear that the name of Sir William Cubitt is in the obituary of this week. He has died after an illness which, for some years, had rendered him incapable of following his profession. Sir William was of a different family from that of the late Thomas Cubitt, but, like the latter gentleman, he had the merit of making his way from "nothing," to honour, eminence and fortune. Thomas Cubitt began life as a carpenter,—William Cubitt, as a joiner. At the age of 22, he attracted notice by his invention of the self-regulating sails for windmills. He soon became known as a general engineer, and we may say *felt* too, for in 1825 he invented the Treadmill; whereby, as an early practitioner upon it remarked, if he could not add a cubit to his height he could to his cursing. This "Cubit measure," as the sentences were called, of so many months at the mill, terrified all the thieves in London, and they have never taken to it kindly. The chief of his other works were the enabling sea-going vessels to be navigated from Lowestoft to Norwich, and the construction of the South-Eastern Railway, to clear a road for which the great South Downs cliff was blown up, he personally superintending the undertaking. It was his experience that was employed to watch the erection of the Great National Exhibition, the iron and crystal building of 1851, and so provide for its security. For his exertions he received the honour of knighthood, and has now passed away, in his 76th year, the pride of his native Norfolk village of Dilham, and leaving another great name on the roll of men whom the world honour heartily,—the architects of their own fortunes, the real founders of their family.

The local newspapers announce the death of "Mr. Charles Crocker, the Chichester poet." Chichester can boast of its poets of some celebrity, Collins amongst others; yet Charles Crocker is not undeserving a few words of honourable record and remembrance. Many years since we noticed his little volume as evidence of an appreciative and sympathizing taste in one of the humbler classes; for Crocker was at that time a working shoemaker, and a working shoemaker he continued, until his virtuous life had won for him the respect of his fellow-citizens, and he was appointed sexton, and subsequently verger, of the Cathedral. A humble office this, yet it sufficed for his ambition, and to make more generally known his gentle manners and general intelligence. It speaks well for Chichester that Charles Crocker, "the verger," was followed to the grave by Dr. Hook, the Dean, by many of the canons, by the Precentor, the clergy, Mr. Freeland, M.P. for Chichester, the Mayor, and by many of the aldermen, and other more distinguished gentlemen of the locality, and that at the Cathedral a funeral anthem was performed as a mark of respect.

The annual Exhibition of the Works of Modern Artists opened at Manchester last week. The Reporter of the *Examiner* and *Times* has much to say on the subject, and appears to have felt himself in a locality to which he had not been accustomed, remarking on his entry, "for the first time within our recollection we found a crimson floor-cloth"; and he notes it down as a thing "pleasant to the eye." He compliments the hanging committee on their painstaking and good taste, but is perplexed by the picture of a bird's-nest hung upside down, and exhibiting something antagonistic to the law of gravity in the undisturbed position of the eggs. This critic describes Mr. O'Neill's 'Leaving the Docks' as "an interesting crowd of well-drawn figures," while another critic,

in the *Courier*, confines himself to remarking that "it is priced 735*l*. The figures represent its fame,"—we should say the figures were rather "over-drawn." Both papers speak highly of 'Lord Ullin's Daughter,' by J. Lamont Brodie.

There is as yet a subject which has been strangely neglected by historians, namely, a complete account of the "Scottish Guard in France;" next to it, in interest, would be a narrative of the "French in Scotland." Traces of the time when royal marriages produced political alliances, and interchanges of armed aid, and other mediæval courtesies between the two countries, are still numerous in French names and French phrases to be found in Scotland. The subjects we have alluded to have been selected by one writer, M. Michel, who is engaged on a work to be entitled, 'The Scots in France and the French in Scotland.'

M. Victor Hugo is said by the French journals to have sold the MS. of a new work, 'Les Misérables,' for the sum of 400,000 francs.

The Railway Passengers' Assurance Company claim to have the honour of giving 600*l*. for the last page but one of the advertising wrapper of the two shilling Catalogues of the Exhibition of 1862. By an error, the Accidental Death Assurance Company was named last week instead of the above.

Down Cathedral, Ireland, whose foundation dates from the twelfth century, and which ranks among the best examples of Irish Ecclesiastical architecture, is about to undergo restoration, if (that "potent if") the funds can be raised. The admirers of Jeremy Taylor, the honoured Bishop of this diocese, will rejoice to hear of the opportunity now afforded them, for, says the *Dublin Evening Mail*, some memorial of that ornament of the see of Down is intended amongst the improvements of the cathedral of the diocese over which he presided. Jeremy Taylor, it will be remembered, erected the tower on the Cathedral of Downmore, and his thrifty wife contributed the plate. These are good examples to be followed.

"Bowling," as a pastime followed by the pit-men, has not gone out in the North of England. "Rarely a Saturday passes," we are told by a Correspondent (Mr. W. H. Smith), from the chief town in Northumberland, "without one or more matches or handicaps being contested on the Town Moor, at Newcastle, sometimes for large stakes." The same Correspondent, speaking of local customs, adds, that "it is a very common practice in the North, both with the mining and agricultural populations, to place, in oral discourse, the christian and surname of the wife before the merely christian name of the husband;—more especially where the wife takes a very active part in their joint business, or when it conduces to greater euphony."

There is a notice by Mr. Braouezec of the people of the Gaboon and its affluents, and of the river Ogouwai, in the *Bulletin de la Société Géographique* for June. To the highest peak of the Crystal Mountains the French officers assign a measurement of 1,400 metres, or under 5,000 feet, but they speak of a mountain country behind, and indicate that an American missionary is the person who knows most about it. It is singular that the French Lieutenant, writing of his researches in 1858-9, makes no mention of Du Chaillu nor of his discoveries between 1857 and 1859, though he refers to Mr. Best, an American missionary, as having visited the Crystal Mountains and the country of the Faons.

Doré's edition of Dante's 'Inferno' was advertised for publication in July last, the price 5*l*. In the present month it has been advertised for 4*l*., namely 100 francs, a reduction of 20 per cent. A Correspondent, who purchased a copy early, complains of this proceeding on the part of the publishers, Messrs. Hachette, of Paris, with whom, indeed, he has so successfully remonstrated as to obtain from them an intimation that they have altered their arrangements, and an offer to return him "three shillings," which he describes as "rather evading than properly meeting his claim." Such a course is very likely to deter rather than invite

purchasers, who will naturally be looking out for "further reductions" before they go into the market. Nevertheless, the original buyers have no "claim" against the publishers, whose offer of "three shillings" is the instalment of a confession that they had made a mistake, which they rectify, perhaps, "on account."

The Italian general Cialdini will take his place among literary soldiers, as well as among other heroes. His despatches and his letters to municipal chiefs are remarkable for their spirit and originality. They say what the writer means, and they mean what he says,—two distinct matters. Their satirical turn indicates a quality which belonged to the writer from early youth. When Cialdini was studying mathematics under the Jesuits at Reggio, he was expelled for making an algebraic equation, wherein an ass was placed as being equal to a Jesuit. His expulsion justified the correctness of the equation.

Mr. C. D. Conway, who states that he was with the British Brigade under Garibaldi "during the entire period of its existence," waiting an opportunity to refute fully the statements made in a work which we recently noticed, 'The Track of the Garibaldians through Italy and Sicily,' begs, through our columns, to "warn the British public" against giving credence to what is there advanced disparagingly against the Legion.

Our Spanish Correspondent says:—"A slip of the pen in my first letter from Spain [*Athen.* No. 1769] must be corrected, as it may mislead tourists. I spoke of Pamplona as now only four-and-twenty hours distant from Madrid. This is wrong. Pamplona is a few hours distant (by rail) from Tudela, and thence to Madrid, by Hadraque (where one joins the rail again), the run is of four-and-twenty hours. Every half-year, however, will lessen the time. C."

The French papers announce the recent erection at Lyons of a statue commemorating Jaquard of the loom, to whose ingenuity the silk-weaving town is so largely indebted.—In the same columns a tributary project of a totally different humour is announced. There is a talk at Missolonghi, says the *Patrie*, of erecting there (with Greek money!) a monument to Lord Byron. This, we fancy, may be merely an air-castle.

The City of Dordrecht, in its capacity of being the birthplace of Ary Scheffer, intends to erect a statue to the artist. A grand *fête* will be celebrated on the occasion, for which the poet, Mynheer van den Bergh, at the Hague, has been invited to write a Cantata.

SCIENCE

Routledge's Illustrated Natural History. Birds.
By the Rev. J. G. Wood. (Routledge & Co.)

THE flight of time has brought Mr. Wood and his artists to the flight of birds; and, between them, these gentlemen have produced a handsome and readable volume. In the text Mr. Wood has not indeed taken wing like his subjects; but though he does not write winged words about winged creatures, he does sensibly handle that plume with which some one of the winged creatures has supplied him.

Although in such a book as the present, where the text-writer is restricted to a certain number of pages and a fixed number of Parts, one ought not to expect too much; yet we may remark, that the readiest method of rendering such a branch of Natural History as Ornithology extensively popular, would be to abound more in anecdote and history, and to be sparing of descriptions and the notation of mere generic and specific distinctions. Young people and the class of general readers for whom this publication is chiefly designed, are easily attracted by stories and traits of animal character, while they are provokingly indifferent to a bird's proper place in classification, and its special rank and scientific position, and also

to such information as how many eggs it lays, and what are the spottings and colourings of the eggs of each bird. A man who has a passion for this science, and who, like Audubon or Wilson, will traverse wildernesses and forests and endure all kinds of hardships for the sake of acquiring new birds and acquainting himself with their habits and haunts, can throw a powerful charm round even his technical details by narrating the events of his own history in connexion with the objects of his pursuit. A man also of mere descriptive power, like Michelet, and who has never been out of his house after birds, or beyond a museum, will do much to make Ornithology widely attractive. Michelet's book, 'L'Oiseau,' is remarkable as an illustration of what a rich fancy can make of a few common facts and observations about birds. An equally rich fancy, combined with a far larger acquaintance with the science, might produce a very acceptable bird-book.

We do not mean that birds should be a mere subject for comedy, as Aristophanes made them. This would be easy and amusing enough, and nothing more. But the peculiar instincts and habits of birds might be more fully illustrated, or the existing and scattered illustrations more carefully collected and arranged. Something of this kind has been effected in one or two scientific books, though very partially; but every decade of years brings forward new facts and observations, and there is probably much of high interest and instructiveness to be found flitting about, wherever birds fly and patient observers note their flight and their behaviour. Mr. Wood has a sprinkling of such things, which gives us a zest for more.

The following story of a Redbreast, narrated by Mr. Thompson, and cited in the book before us, is not commonly known:—

"At Fort William, the seat of a relation, the following circumstance occurred. In a pantry, the window of which was left open during the day, one of these birds constructed its nest early in the summer. The place selected was the corner of a moderately high shelf, among pickle-bottles, which being four-sided gave the nest the singular appearance of a perfect square. It was made of green moss, and lined with a little black hair; on the one side which was exposed to view, and that only, were dead beech-leaves. When any article near the nest was sought for by the housekeeper, the bird instead of flying out of the window, as might have been expected, alighted on the floor, and waited there patiently until the cause of the disturbance was over, when it immediately returned to its nest. Five eggs were laid, which, after having been incubated without success for the long period of about five weeks, were forsaken. The room above this pantry was occupied as a bird-stuffing apartment; after the redbreast had deserted the lower story a bird of this species—doubtless the same individual—visited it daily, and was as often expelled. My friend, finding its expulsion of no avail, for it continued to return, had recourse to a novel and rather comical expedient. Having a short time before received a collection of stuffed Asiatic quadrupeds, he selected the most fierce-looking carnivora, and placed them at the open window, which they nearly filled up, hoping that their formidable aspect might deter the bird from future ingress. It was not, however, to be so frightened 'from its propriety,' but made its *entrée* as usual. The walls of the room, the tables in it, and nearly the entire floor, were occupied by these stuffed quadrupeds. The perseverance of the Robin was at length rewarded by a free permission to have its own way, when, as if in defiance of the *ruse* that was practised against it, the place chosen for the nest was the head of a shark which hung on the wall (the mouth being gagged may have prevented it being the site); while the tail, &c. of an alligator stuffed, served to screen it from observation. During the operation of forming this nest, the

redbreast did not in the least regard the presence of my friend; but both man and bird worked away within a few feet of each other. On the 1st of June I saw it seated on the eggs, which were five in number; they were all productive and the whole brood in due time escaped in safety."

Another singular anecdote is related of a Black Redstart:—

"A railway carriage had been left for some weeks out of use in the station at Giessen, Hesse Darmstadt, in the month of May, 1852, and when the superintendent came to examine the carriage, he found that a black redstart had built her nest upon the collision spring; he very humanely retained the carriage in its shed until its use was imperatively demanded, and at last attached it to the train which ran to Frankfort-on-the-Maine, a distance of nearly forty miles. It remained at Frankfort for thirty-six hours, and was then brought back to Giessen, and after one or two short journeys, came back again to rest at Giessen, after a period of four days. The young birds were by this time partly fledged, and finding that the parent bird had not deserted her offspring, the superintendent carefully removed the nest to a place of safety, whither the parent soon followed. The young were, in process of time, full fledged and left the nest to shift for themselves. It is evident that one at least of the parent birds must have accompanied the nest in all its journeys, for, putting aside the difficulty which must have been experienced by the parents in watching for every carriage that arrived at Giessen, the nestlings would have perished from hunger during their stay at Frankfort, for everyone who has reared young birds is perfectly aware that they need food every two hours. Moreover, the guard of the train repeatedly saw a red-tailed bird flying about that part of the carriage on which the nest was placed."

Amongst birds familiar to us all, none is more beautiful than the Kingfisher, yet his greediness and gluttony sadly detract from the charms of his brilliant plumage, which, strangely enough, loses all its gorgeousness when viewed against freshly fallen snow. That a bird so mythically poetical as to descend to our time under the old name of Halcyon, and to give even to some portions of our existence the sentimental name of "Halcyon days"—fourteen days of calm weather being fabulously within the power of the halcyon or kingfisher, whilst its nest lay snugly and dryly on the surface of the sea—that such a bird should turn out to be nothing short of a voracious feeder and never-satisfied fisher is a painfully prosaic translation of fable into fact. Mr. Gould has recently settled a long open question respecting the singular materials found where the kingfisher lays its eggs. He watched and experimented upon a kingfisher's building propensity, and ultimately dug up the well-formed nest of fish-bones of the size of a small saucer, and the walls of which were fully half an inch thick. The mass of bones—weighing 700 grains—had been cast up and deposited by the bird and its mate in the short space of twenty-one days, during which eight beautiful eggs, an unusual number, were laid by these fish-feeders. To obtain any approximate idea of the number of fish required to form this mass, the skeleton of a minnow, this bird's usual food, must be carefully weighed. Certainly this is making the most of fish—to live upon their flesh and build with their bones.

Probably some of these bones were the remains of hoarded fish, for the kingfisher when he has caught more than he can eat at once, will carry his fish to a storehouse and hide them there till his appetite returns. In one instance this storehouse was a crevice formed by the roots of a willow tree growing close to the water's edge, and it usually contained one or two fish, although sometimes there were five or six in the crevice, and some of them so large that they were removed and cooked.

The labour with which the bird-fisher had got these on shore was evident from the strong tracks of its feet on the soft mud of the bank.

On some occasions this devourer has met with poetical justice inflicted on him by his prey, though passively, so that he has fallen a victim to his voracity. Mr. Wood narrates the following instance of such a fate:—

"A kingfisher had caught a common bull-head, or miller's thumb, a well-known large-headed fish, and on attempting to swallow it had been baffled by the large head, which refused to pass through the gullet, and accordingly choked the bird. The kingfisher must have been extremely hungry when it attempted to eat so large a morsel, as the fish was evidently of a size that could not possibly have been accommodated in the bird's interior. Several similar examples are known; but one, which is recorded by Mr. Quekett, is of so remarkable a kind, that it is worthy of notice. The bird had caught and actually attempted to swallow a young dabchick, and, as might be supposed, had miserably failed in the attempt. The most complete instance of poetical justice befalling a kingfisher, is one which occurred in Gloucestershire, and was related to me by an eye-witness. The narrator was sitting on the bank of a favourite river and watching the birds, fish, and insects that disport themselves upon and in its waters, when some strange blue object was seen floating down the stream, and splashing the water with great vehemence. On a nearer approach it was seen to be a kingfisher, from whose mouth protruded the tail and part of the body of a fish. The struggles of the choking bird became more and more faint, and had well-nigh ceased, when a pike protruded his broad nose from the water, seized both kingfisher and fish, and disappeared with them into the regions below."

Gluttons are not usually susceptible of the charms of music, yet the kingfisher is, for in a room overlooking a stream which kingfishers frequented, an organ was placed and played on. The performer observed that whenever old solemn strains and ecclesiastical chaunts were played the birds would soon make their appearance at the bottom of the garden, and sit there as if enchanted by the strains. But quick and lively airs appeared to disconcert them, as was discovered after many experiments and much patience in observing.

Sensibility to music would lead us to expect a friendly disposition and a willingness to become familiar with man. That such is the case with the kingfisher is little known; but we shall confirm the fact by an extract from Mr. Wood:—

"The kingfisher, if unmolested, soon learns to be familiar with man, and has no hesitation in carrying on the daily affairs of its life without heeding the near presence of a human observer. I have known a kingfisher to sit upon a projecting stone that overhung a stream running at the foot of a garden, and to permit the owners of the garden to watch its proceedings without exhibiting any alarm. If managed properly, this interesting bird will so far extend its confidence to man as to become partially domesticated, speedily rivalling the robin or the sparrow in the bold familiarity of its manners. One such bird, that was tamed by a friend, owed its domestication to the loss of its parents. Three young kingfishers were seen sitting in a row upon a branch of a tree close to a stream, and drew the attention of their future guardian by their constant wailing after food. Various kinds of food were accordingly procured for the poor desolate birds; but as the right sort of diet was not obtained for some days, two of the young birds died. The third, however, survived, and lived for a considerable time, coming regularly for his food, and receiving it at the hands of his protector, but never venturing into the house. In process of time he met with a mate and founded a family after the usual kingfisher fashion. But he soon discovered that it was easier to supply his family with food by resorting to his kind friends and asking them for fish, than by spending time and trouble in capturing fish for

himself. One of these birds became self-tamed, if such an expression may be used, and was remarkably familiar with the person to whom it owed its self-acknowledged allegiance. The association began as follows:—A young man was fishing in a preserved stream, and had caught, as is sometimes the case, a very little fish instead of the trout which he was endeavouring to capture. He took the insignificant prey off the hook and flung it towards the river, intending to return it to the water. His aim, however, was not a good one, and the fish fell upon the bank instead of reaching the stream, and was immediately pounced upon by a kingfisher that shot unexpectedly through the air. Being rather amused at so bold a proceeding, the angler threw the next little fish on the grass, and had the pleasure of seeing the bird come and seize it as before. By degrees the bird became more and more familiar, until, encouraged by impunity, it would snatch up a fish within a yard of the angler, and after swallowing it or carrying it home, would perch on a neighbouring bough and wait for more. After awhile the angler bethought himself of accompanying each fish with a peculiar cry, and in a very short time the bird understood the call, and would come whenever it was uttered. This strange friendship endured for upwards of three years, but the ultimate fate of the bird I have not been able to discover. It never would take the fish out of the hand, but was in every other way so exceedingly tame that the keepers were utterly astounded, the possibility of taming a wild bird never having entered their dull heads."

These are the kind of narratives which will render a work like the present welcome in many households, and which will not be without interest even for the "heads of families."

In looking through these pages, we cannot but feel that the clever artists deserve a word or two, and in fact their work will be the first to attract the eye of all who may open the pages of this volume. With very few exceptions, they have succeeded in portraying their feathered friends both faithfully and strikingly, and they are entitled to the more credit for such faithfulness when we remember that no one of the birds ever gave the artist a sitting.

Of course birds, like men and women, are more or less easily represented; and thus, while a few of the less presentable birds do not come forth in these woodcuts as they might in a different style of art, there are others, and these form the majority, which are remarkably life-like. Among the rarer birds so delineated we may name the Emeu, the Rhea and the Cassowary.

How far such ornithologists as Mr. Gould and others who have published costly books upon birds will be pleased with the issue of such cheap illustrations as those before us is no affair of ours, but certainly the economical public have every reason to be grateful for so much plain and popular ornithology, so well illustrated, and at so moderate a cost.

FINE ARTS

FLORENCE EXHIBITION.

Florence, October 12, 1861.

ALTHOUGH many Sections of our Italian National Exhibition are still very incomplete, yet its spacious picture-halls are now nearly all open to the public, and form one of the principal points of attraction to the visitors of every class. And in truth a more interesting sight for all who take an interest in the Art-career of the new nation can hardly be found than that presented by the collection of pictures, which fill three great halls on the ground-floor of the Exhibition-palace, and above a dozen smaller rooms on the first story. They come from every part of Italy, and a mere glance over them triumphantly shows the falseness of the too common assertion, that Modern Italy is hopelessly sterile in that artistic power which was among her noblest boasts three centuries ago. The picture-show of our Exhibition is such as no nation

of Europe had need to be ashamed of; and so far from being fruitful in the mere *rechauffés* of foregone style and subject which mark a period of stagnation in Art, it contains a great number of works abounding in fresh and original thought, and admirable both for sentiment and effect, although at times deficient in the careful finish which was the almost sole merit of the last generation of Italy's modern painters. But, in truth, one of the most interesting features of the picture-show at the Exhibition is the juxtaposition of paintings by men of the *ci-devant* or Academic school, such as the late Prof. Bezzuoli, Giorgio Berti and others, and in landscape, Markò and his numerous imitators, with the works of the new men whose names are rising into note, to wit, Celentano, Induno, Morelli, Pagliano, Comino, and many more, together with the transition party of artists partaking of the characteristics of both schools, such as Pollastrini, Ussi, &c., to whose pencils are owing some of the most striking pictures in the collection. It is also very cheering to see the immense progress made of late years in Italy in landscape-painting. The garish conventionalities which were wont to pass for studies from nature here but a few years ago, with their teaboard smoothness, their pompous assemblage of meretricious accessories and unmeaning elaboration of handling, have given place in many cases to mere sketches of scenery severely faithful to nature, and sober, sometimes too sober, in choice of effects. These, however, are the pictures which hold an extreme place in the scale of re-action. Between the two poles, as in the former case, there are many very beautiful works well worthy of notice. Signor Comino of Turin has more than one landscape of rare charm and truthfulness, especially the one marked 'Shepherds on the Mountain,' in which the mighty snow-robed mass of Monte Rosa rises full in front of the spectator, parted from him only by an intervening ravine; on the hither side of which there is an admirable foreground of broken rock-buttresses and herbage, with a train of cattle and sheep, followed by their guardians, just dipping over the edge of the precipice, where a grassy track leads down into the purple haze of the awful rift below. The pale golden glory of the snow, and the uncertain mists floating about the outlines of the mountain-peaks are singularly well given.—Signor Corvini has two excellent landscapes of careful and most difficult study. The one represents a piece of water slightly frozen over, with groups of trees and bushes just powdered by a snow shower; the other is an intricate forest glade, stripped of its foliage and under the same delicate snow-effect as the former. Signor Vertunno, too, a Neapolitan artist, has a powerfully characteristic picture of the desolate Roman Campagna, with its stunted herbage and ruined walls. The landscapes of Signor Valentini belong strictly to the new and sober school, and are considered as among its best specimens. The artists of Northern Italy seem rather to bear away the palm for landscape from their midland and southern brethren, though in truth it must be said that in every branch of the art Naples has her full share of representatives, and that she has far outstepped Tuscany in the race for honours to be won in accordance with the new doctrines of sentiment *versus* finish, or, as one may say, of mind *versus* matter.

The ground-floor halls contain the paintings of greatest calibre and pretension. Ussi's 'Duke of Athens signing his own Sentence of Banishment' is here, a noble picture, of which I gave some account last year in the columns of the *Athenæum*. Here also is Pollastrini's well-known painting of 'The Exiles of Siena,' charming in its sentiment and drawing, but somewhat defective in colouring and in the management of the light, which falls too exclusively and monotonously on the upper portion of the figures. The same artist has also here a remarkable 'Death of Alexander dei Medici,' the effect of which is marred by the horrible nature of the subject. Signor Musini has several large pictures besides his wide-eyed portrait of the King; all hard, correct, and ungenial, though clear in colouring. Signor Rapisardi (a Sicilian), besides many works already familiar to the Florentine public, has also a very large and in many respects

effective painting destined for an altar-piece, and representing a scene in the life of Saint Benedict.—'The Defeat of Ezzelino da Romano,' by Signor Malatesta of Rimini, a picture of grandiose proportions (some four metres by three and a quarter), is very unequal in parts, and the background and sky sorely smudged and uncertain, but the principal figures are full of life, excellently grouped, and the whole painting tells its story admirably well. All the large historical pictures in the lower rooms may be said to belong to the transition school in Italy, and they would assuredly be remarkable in any Exhibition in Europe, although something of the old academical stiffness and mechanical compounding of effects according to recipe can yet be traced in them.

Among the most attractive pictures in the Exhibition, and those which hold out the fairest promise for Italy's artistic future, I shall now jot down a few, some of which will, in all probability, be sent to the London Exhibition of 1862 as samples of modern Italian Art. Signor Lanfredini's 'Episode from the Battle of Magenta' embodies the touching story recorded in the newspaper accounts of the battle, and embalmed in the noble verse of the late lamented poetess, Mrs. Browning, of the cartridges which were found without ball on the bodies of young Italian recruits in the Austrian service, who, compelled by their tyrants, had fallen fighting against the countrymen whom they loved too well to harm. One of these true-hearted striplings lies dead on the ground, the centre of a knot of Italian soldiers, one of whom, with a face of indignant emotion, holds out the ball-less cartridges found in the dead lad's pouch to a group of passing patrol on the field of battle. The treatment of the subject is simple, unaffected, and it is evidently executed *con amore* as well as with pictorial skill.—'Buondelmonte carried to the Grave,' painted by Signor Altamura, a Sicilian artist long settled in Florence. The grouping and *chiar-oscuro* and the ominous bearing of the crowd around the bier predicting, as it were, the endless bloody feuds of the "Blacks" and "Whites," Guelphs and Ghibellines, to which Buondelmonte's murder opened the way, are well given; but the painting is hasty and sketchy, and the heads are too often reproductions of the same type. Signor Altamura has several other pictures of smaller size in the Exhibition. The most effective perhaps is 'The Return of Tasso to his Sister's House at Sorrento.' Years and sufferings have so changed the brother's face as to make him unrecognizable by her as they stand face to face under one of the pillared vine-arbours so common in Italy, while the sunshine streams through the leaves above, and the two figures are powerfully thrown out by a distant background of brilliant sky and sea and bloomy mountainous shore. A servant waiting a few paces off, and the sister's little wondering child gazing at the unwonted figure of the strange gentleman, make up the picture.

There are several battle-pieces, or rather episodes from battles, which are full of talent and effect; especially Signor Emilio Lapi's 'Scene from the Battle of Palestro'; Italian Light-horse chasing Austrians over broken arable ground, towards the spectator: a composition demanding great skill in the drawing, and admirable for its study of character in the faces of the pursuers and pursued.

Signor Induno, of Naples, exhibits, among other works, a spirited 'Bivouac of Volunteers,' and a domestic scene, called 'The Letter,' which has been greatly admired. It represents a family group, gathered in the "house-place" of an old-fashioned *fattoria*, or farm-house, to hear the tidings sent by a volunteer son from the scene of the war. The pretty puzzled look of the reading sister, with the photograph of the young soldier lying on the table beside her; the mother's eager attention; and the figure of the old father, spectacles on nose, backed up against the antique fireplace, are all worthy of great praise.—Signor Cabianca, with too much of dash and carelessness in his style, unites a great deal of poetical sentiment and originality; witness his 'Old Woman and Child,' standing in an aureole of glorious Italian sunshine on the threshold of a tumble-down cottage, whose blank, ruinous

wall forms the background to the figures; and still better, as a sample of his power, witness the small oblong picture above stairs, called 'Morning,'—no pageant of rosy-fingered nymphs and coquettish cupids, but a modest-tinted sweep of pale sea and wavy coast-line, seen from a grassy height, whose rampart-like outline cuts against the faint sea-blue. In the foreground, in the left-hand corner of the picture, rises the grim arched portal of a convent, from which issue listless pairs of white-coifed nuns to take their mournful recreation on the breezy terrace, where some of them stand watching the cooing flirtations of a party of white pigeons, while others descend some steps which lead into the cold blue shadow of a burial crypt. The whole tone of the painting is subdued and harmonious, and leaves nothing to be desired, but a little more manual industry—

That mortal half, without which genius' self
Is an unbodied spirit.

Signor Brini's picture of the 'Inquisition,' exhibited some years since in Florence, is one of the attractions of the upper rooms. It tells the revolting and too-often-enacted story of fanatic cruelty, wreaked on a helpless and innocent victim in the dark torture-chambers of the self-styled Holy Office. A young and beautiful woman sentenced to the rack is half lying, half sitting on the ground, in the grasp of her persecutors, while the relentless judges sit round, fiercely vindictive or coldly cruel, presided over by a gross-featured, heavy-browed Dominican, who with pointed finger directs the familiars in their hideous office. The red lamp-light which illumines the scene, mingling with a stream of daylight that comes down a distant flight of stairs, is most skilfully managed. This picture created a great sensation in Florence when first shown here, before the opening of Italy's new dawn of civil and religious freedom, when, after being exhibited for a few days, it was removed by summary order of the police. Strange to say, Signor Brini has produced no subsequent work of anything like similar merit.

'The Death of Tintoretto's Daughter,' by Signor Pagliano, of Milan, is another of the gems of the picture-show. Like most of these new Italian *tableaux de genre*, it is remarkable for soberness of conception and skilful drawing. The young girl lies extended on her bed, the flush of life scarcely yet faded from her lips, and pressing a crucifix upon her bosom, while the despairing father kneels behind the foot of the couch, his grey head bowed down, and his face hidden in the bed-clothes. Slender materials these, it would seem, yet they make up a touching and delightful picture.

I must not forget to mention Signor Celentano's 'Venetian Senators': a very noticeable work for its careful painting, dignity and individuality in the figures, and the easy harmony of action which pervades the whole. It represents a number of senators of the Republic of St. Mark passing along the court of the Ducal Palace, previous to mounting the Giant's Stairs to their council-hall. Each particular figure comes out with a power and significance which imprints it bodily on the memory, and the painting owes little or nothing to richness of colour, from the necessary prevalence of violets and blacks in the senators' robes, and the grey stone-work of the walls of the venerable palace court, only the lower story of which appears on the oblong canvas, so as to leave no space of sky above.

Naples, as I said before, has been very fertile in paintings of merit. One of her worthiest representatives at the Exhibition is Signor Morelli, a young artist, whose name is already well famed throughout Italy. His largest and most ambitious picture here is 'The Iconoclasts.' It represents a painter, one of the early Christians who adorned with their stiff Byzantine Saints and Crucifixions the gloomy niches and altars in the Roman Catacombs, discovered by a party of Iconoclasts (image destroyers) painting a rude image of the Saviour over the sepulchre of his dead wife, in those gruesome vaults. The intruders heap insults on the unfortunate limner, and wound him in the tenderest feelings of his nature; trampling on his pictures, breaking palette and brushes, and loading him with coarse abuse, while he, half kneeling, receives the storm with sternly compressed lips and eyes fixed on the

earth, waiting in silent dignity for the probable death which he expects will follow. The female figure which stands behind, veiling her eyes with a red mantle, rather detracts from than adds to the beauty of the composition, owing to something theatrical in the action. 'The Interior of the Women's Baths at Pompeii,' is another greatly-admired picture by the same hand. The aerial perspective and the receding depth of the chamber in which the half-nude figures literally start from the canvas, can hardly be too much commended; but a little more beauty of feature might have been bestowed on the fair Pompeian bathers, and one of the figures has a sad defect in the modelling of the waist, which gives it the appearance of an unsightly wen, and which probably a few touches would remedy.

'Lara and his Page' is another picture of merit, by Signor Morelli, and perhaps, as a whole, superior to that last mentioned, for power of drawing and that careful execution which, in general, is this painter's weak point. He has several other works in the collection, all of much merit, though less important than those of which I have spoken.

There is a remarkable lack of good portraits in the Exhibition. Three or four only are such as to leave any lasting impression. Signor Gordigiani, the son of the late composer, is perhaps the most fortunate in this branch. His portrait of the Marchesa Tolomei is very admirable, both as a likeness and as a work of Art. I must not conclude this letter without mentioning a large picture, which though of no great merit in itself is always sure to be found surrounded by a group of gazers. I mean Signor Puccinelli's 'Murder of the Cigoli Family,' by General Urban, in the last campaign against the Austrians. Every one knows the piteous tale of a whole peasant family shot down in cold blood for the crime of possessing in their dwelling some forbidden fire-arms. The composition is not particularly happy; the colouring not especially good; yet, every day, and above all on Sundays (the gratis days, when all Florence goes in free), this picture is the centre of sympathizing thousands, and I myself heard a sturdy artisan exclaim to his leaner half, after they had stood gazing at it for full five minutes,—“And to think that those rascals (the Austrian soldiers) are the friends of ‘il Babbo!’ (the late Grand Duke). Among the three thousand pictures and upwards which the Exhibition contains, none has laid a stronger hold than this on the hearts of the people. I shall hope in another letter to give some account of the sculpture-rooms, which are not yet complete.

TH. T.

FINE-ART GOSSIP.—A very effective drinking-fountain has been erected at the intersection of Victoria Street with Shaftesbury Crescent, Westminster. It consists of a vase of polished dark-red marble, of oval form and Etruscan character, with broad handles; this is placed upon a solid square block of grey marble, one face of which is hollowed out so as to form a recess, under which the water runs from a carved shell into a shallow basin at its foot; this block rests upon a broad table of grey granite in itself placed upon a handsome square base of the same dark-red marble as that employed for the vase. The horrid things which enterprising ironmongers have purveyed for the corruption of the public taste, and benevolent individuals bestowed upon us under the name of drinking-fountains, are so offensive to the eye that we heartily welcome the sight of anything so modest, elegant and grave as this little work.

On Tuesday last Mr. Burchett, Head-Master of the Training School of the Department of Science and Art, at South Kensington, distributed the medals and certificates to the pupils of the school in the department in question. The names of the recipients we have already recorded. The Head-Master, in addressing the students assembled, urged upon them the necessity of maintaining a high class of works, expressed his satisfaction that such had been attained, and commented upon the fact of a lady (Miss Helena Wilson) having for the fourth time obtained the highly honourable third-class certificate.

In pulling down the wall of the north aisle of

the choir of Worcester Cathedral, during the restorations now proceeding, an elm coffin was discovered in a hollow space, about six feet long, built into the substance of the wall. Within the coffin was found a perfect skeleton, the bones of which had become of a perfectly brown colour. The remains of some garments were discovered, and especially the soles of a pair of sandals, the leather of which was perfectly tough, and but little worn. The skeleton was lying with the head to the west, the arms across the chest, and appeared to be that of a male adult of middle age: one of the teeth had been evidently lost during life. The head is large, and the person had apparently been about 5 ft. 8 in. in height. Underneath the vault is an entrance to the crypt.

Some observations of ours respecting the Church of St. Mary, at Whitby, appear to have been so far misunderstood that a Correspondent presumes them to have been written in “grave irony.” We are unable to discover the grounds for this idea; our remarks and expression of a hope that the edifice in question might remain unrestored were plainly expressed, and seriously intended. We repeat that, of its kind, nothing can be more picturesque than the present appearance of the church; no doubt it is comfortably weathertight and commodious,—indeed, the look of service it displayed bore evidence to that effect. Then why restore it? Shall we be sure to make more beautiful that which has an expressive character of its own, which, to any but eyes that fail to see beauty out of conventionality, is eminently impressive? It is quite time that people took a thought upon the subject of the ruthless “restoration” of churches, so common now-a-days. One would really think that our fathers, grandfathers and great-grandfathers were folks whom we would forget as swiftly as possible, and that the marks of their occupancy of our world, not always artistically beautiful, it must be admitted, although truly so in the case in hand, should be torn down in order to produce that which is, after all, but a re-construction, very often with ill success, of the works of still more remote ancestors. It will be understood that we are not arguing against careful restoration in general, but opposing the reckless change of churches which have little or no architectural noteworthy, and especially advocating the preservation in its present state of a truly characteristic and singularly picturesque building. Suppose we do pull the service-scarred edifices to pieces, remove the quaint galleries, the deep and singularly inartistic pews, tear down the old tablets with the queerly arranged scriptural quotations, put on a new roof with vaulting or open timbers, raise the tower, and, instead of the great Dutch globe with its many burners, put port lacquered standards, having the newest Birmingham glitter upon them, moulded into all sorts of flagee, and with the most modern *recherché* twiddlings round about them, put the loftiest arcade to the aisles, band their shafts and openings with verses in blue, black and vermilion, in a character no fisherman of the town and exceedingly few of the population in general can read! Let a clerestory take the duty of the many-windowed roof, and light the interior through new stained glass, and what do you get by all this? An extremely correct building with which no stranger will have a grain of sympathy, and no native an association to remind him of his father, his mother or his own youth. For the sake of smoothed freestone and polished granite, for cheap brass and encaustic tiles, machine-made glass and a pulpit carved by steam, or a wonderful altar-cloth all gold and silk, it is proposed to do away with the memories of three centuries and ten generations, destroying, at the same time, a thing which is more truly beautiful, being a picturesque result of Time's changes, than the most successful adaptation,—which may be beautiful, but will certainly not be venerable. Another matter which we shall urge may be worth consideration ere such a thing is decided on. As it stands, there is quite sufficient of the dignity of age and service about St. Mary's Church to prevent its being out of keeping with the adjacent Abbey ruin. How a fine new modern Gothic church will agree with the latter it is quite needless to say.

MUSIC AND THE DRAMA

ROYAL ENGLISH OPERA, COVENT GARDEN, under the Management of MISS LOUISA PYNE and MR. W. HARRISON, WILL OPEN for the SIXTH SEASON, on MONDAY NEXT, October 31st, with (first time) an entirely New Opera, by Howard Glover, entitled 'RUY BLAS.' Principal Characters by Miss Louisa Pyne, Miss Susan Pyne, Miss Thirlwall, Miss Jessie McLean (her first appearance on the English stage), Mr. Santley, Mr. A. St. Albans, Mr. Patey, and Mr. W. Harrison. Conductor, Mr. Alfred Mellon.—Doors open at half-past six; commence at seven. Box Office open daily from Ten to Five o'clock.

GRAND OPÉRA OF PARIS.—Gluck's '*Alceste*.'—There is, perhaps, no drama in music so much talked of, so little known, as Gluck's '*Alceste*.' Every amateur has read the preface; but it is doubtful whether one in a hundred belonging to the present generation has gone further.—Yet the well-known preamble, however sounding it be, however influential it has proved, is a valueless, if not a mischievous, document;—in some most essential points open to reply and rebuke from the very opera which it was written to introduce and recommend. The world, ere it was written, had never, for an instant, questioned the vital value of truth in expression;—but the law of truth, as there propounded by Gluck, has been laid hold of and commented on as a new revelation, recommending the annihilation of those known forms and accepted symmetries on which Music, whether vocal or orchestral, interpreting definite sentiment, or suggesting vague emotion, must depend as basis. In an angry strain of autocracy, he denounced *da capos*, *ritornels*, otherwise, repetitions of themes already announced, as so many sickly conventions and concessions to the singers,—forgetting that his own '*Alceste*' is as full of both as any opera constructed on false principles by those who had not the hardihood to preach what they did not practise! It is true that everything like florid execution is eschewed in '*Alceste*,' as in Gluck's other four living operas; but this,—his justice of taste in selecting or sanctioning the ordinance of the dramas,—and his breathing, burning, varied use of the chorus, in which the old principles originated by Lulli and carried a step onward by Rameau, were wrought out further still, with a force and a brilliancy unknown till he came,—are all the peculiarities of style which can be fairly ascribed to the writer of the much-talked-of confession and diatribe. Before Gluck had ripened into the perfection which will never grow obsolete, Handel and the great Italians had shown how true declamation could be combined with the purest music in recitative;—also what undying might and beauty could lie in a simple melody. '*Lascia ch' io piango*,' is not exceeded in pathos even by '*Objet de mon amour*.'

Wrongly read, then, this '*Alceste*' preface has become the excuse for idleness, error and want of invention;—rightly studied, it amounts to nothing with which every lover of beauty was not long ago familiar. But what signifies the preface, as true or false, when the appreciation of a masterpiece is the matter in question? The opera itself is among the immortalities of Art;—if the sculptor's *Niobe*, and the dramatist's *Lear*, and the painter's *Pitti Ezekiel*, are immortal.—*Alceste*, in Gluck's hands, is the most sublime expression of Woman's devotion existing in the wide range of opera, to pair off with his *Armida* as a presentation of Woman's passion. The same chords of emotion were touched by Beethoven in his '*Fidelio*'; but even he, in spite of all the treasures of orchestral discovery with which he could enrich and decorate his creation, cannot, in tenderness, force and elevation, stand comparison with his more simple and mighty predecessor. As a series, the airs given to *Alceste*, connected as they are by soliloquy and declamation, offer, it may be repeated, the highest occupation to a tragic singer which exists. One, perhaps, even higher may be imagined—a *Medea*; had the sorceress been treated by Gluck.

How admirably, again, is this noble female figure framed and supported!—how is every appearance which she makes after her entrance provided for with as much variety as pertinence.—The solemnity of the temple-music ere the Oracle speaks, the grace of the songs and dances of rejoicing in the restoration to life of her consort, for whom the life of *Alceste* is to be sacrificed,—the voices of terror which claim her on the shores of the Dark River,—the dull, im-

perious call of *Charon*; each and all (to speak fancifully) casting hues and reflections on the main figure as she proceeds on her way,—have a dignity, a fresh beauty, and a supernatural awe, which are resistless.—As supports, again, the persons who surround *Alceste* are characterized with a vigour, which is in advance of its time.—*Admetus*, however important to the story, is, of necessity, effaced in some degree, by the tenderness, constancy and courage of his wife: but his songs would not fit either Gluck's *Roland* or *Pylades*. The inspiration of the *High Priest*, whose part in the Temple act towers above the rest in its grandeur, inasmuch as the speaker among those present is the nearest to the Oracle,—is remarkable in its tone, when compared with the no less forcible, but ruder, music given to *Hercules*. By those who have not heard or seen his operas, or who have not given themselves the trouble of thinking, Gluck has been criticized as limited when compared with later opera-composers,—has been called monotonous, if not poor in character. But his censors have forgotten that antique Beauty has its own world beyond the boundaries of which imagination cannot pass;—they have not recollected sufficiently (to appeal to a comparison perpetually invoked) that, even in Mozart's operas, there is, with small exception, neither colour, costume, nor manner of treatment to distinguish the songs of his heroines one from the other:—those (to instance) of his *Donna Anna* from those of his *Astrafamante* or his *Fiordiligi*.—Throughout the entire drama of '*Alceste*' no want of orchestral fullness is to be felt. The balance betwixt the support and that which is to be supported is perfect.—It is true that the effect of three bassoons,—or of flutes placed where clarionets should be, or of bass-horns, or of some other importunate conceit,—which seduces many incapable of embracing ideas in themselves of the highest order, must be sought elsewhere;—but it is only on an after-study of the score, not while the performance carries the ear along with it, that the critic begins to miss what may be called the neologisms of language in times more modern than Gluck's.—Some lengthiness there is in certain situations.—It may be questioned whether the appearance of *Alceste* would not gain were her first air omitted, and her entrance reserved for the Temple scene;—it may be felt that the last interview betwixt herself and *Admetus*, ere she finally dares the terrors of the gulph, is too long protracted—a re-travelling, so to say, over ground already fought in generous conflict.—But these are only objections which are inevitable to every musical work so lofty in argument and so large in scale; and they are stated merely in order that admiration, as warm as hearty conviction can feel and language express, may not be here confounded with that idolatrous spirit which claims absolute perfection for all that it partly looks up to, partly champions, in the irrational excess of its belief.

Every stage-revival of '*Alceste*' (as, indeed, of every other one of Gluck's five operas), with any hope of success, must depend, for France and England at least, on the artist engaged for the principal part. We cannot (like the Germans) be content with a literally honest and ungraceful presentation of music so intense in its dramatic beauty—so full of poetry. We must have something more than a grammatical *Coriolanus*—than a *Cleopatra* who says her words correctly. Hence, in part, may arise the rarity of our opportunities for enjoying these greatest of operas. The Parisian managers have done wisely in following up the sensation created by *Orphée*, as presented by Madame Viardot. But the production of '*Alceste*' must have proved an undertaking of greater difficulty for them and for her; owing to the wider scope of the drama as regards characters—and the amount of transposition necessary. Not merely should the heroine, by strict right, possess a high *soprano* voice, but the master wrote largely for singers having qualifications now to be found with difficulty. Some of his most august passages are allotted to male voices neither bass, baritone, nor robust tenor, as the distinctions are understood to-day. An *Orestes* in his second '*Iphigenia*'—a *High Priest* in this '*Alceste*' before us, are not to be "cast" in every company. With every trans-

position it is needless to say some of the effect originally intended must depart; but there must be a balance struck betwixt what is accessible and what must be conceded, or these old poems must of necessity be "shelved." Nor, in spite of his preface, ever lived poet more ready to adapt, to arrange, and to concede than the Author of '*Alceste*.' As matters stand at the Grand Opéra, the modifications have been accomplished in such good proportion, and with so much musical propriety, that there is no patchiness nor incoherence to be detected—little to betray to any one hearing the opera for the first time that changes have been ventured because they were inevitable.

In many respects the musical and dramatic execution of '*Alceste*' at Paris will delight those who share our admiration for the genius of Gluck.—Madame Viardot's personation of the principal character must fulfil every expectation excited by the extracts from the opera sung by her at the *Conservatoire* Concerts, which produced so extraordinary a sensation.—It may be described, in one word, as triumphant;—for triumph implies difficulty overcome no less than supremacy. The part does not lie so well for her voice as that of *Orphée*; but her voice is in its best order;—and, either owing to care and repose, or to the strength of enthusiasm and consciousness of command over her audience, it has acquired a power in its middle notes which has been missing at certain stages of her career. Her *Alceste* is thus, musically, one of the most equal of her performances. The poetical feeling and expression thrown by her into the declamatory portions of the part—the force, the tenderness, the love of the woman, who as queen, wife, mother, yields her life to redeem that of her consort, in turns displayed by her, belong to the highest order of tragic art. Nothing comparable has been on the opera-stage since Pasta's royal robes vanished from it. Then, Madame Viardot's singing of Gluck's music—antique, yet never obsolete—has a breadth, a sensitiveness, a union of noble plainness with the finest finish, for which her great predecessor was never called on;—since Pasta's victories were won in music of a far more conventional order.—The *Alceste* of to-day has, no doubt, sought for the right traditions; but she possesses them within her own treasury of musical knowledge, and by right of her own instinct for what is beautiful and becoming in Art.—Let those who have misused Gluck's preface profess what they please; without the limitless vocal accomplishment which this great artist has acquired, it would be impossible for her (the characteristics of her voice considered) to give interest and variety to the grand and simple phrases of the old master.—Her acting is finer, because less elaborate than formerly. Its originality, its thoughtfulness, its power to take the heart by storm in moments when an outburst is permissible, are unimpaired; but her style has gained breadth and repose with time and success.—Here, then, is another figure worthy to take its place in that gallery which contains the most felicitous creations of a Rachel or a Ristori.

The *Admetus* of M. Michot is honestly and expressively sung. The compass and quality of his voice, which is sound and agreeable, suit the music and the character. His action is unpretending, and never by exaggeration or coldness spoils the scenes in which he appears with the heroine. M. Cazaux is pompous as the *High Priest*; the inspired sublimity of the character was not to be expected; it hardly comes within the reach of modern habits or studies. The *Hercules* of M. Borchart is burly and stentorian. The orchestra and chorus have been drilled with care: we are used, however, to something better and more brilliant in London. In the *ballet* the order of the dances has been changed, but Gluck himself cared comparatively little for this portion of his operas, once having written beautiful melodies. On turning over the pages of his '*Dom Juan*,' it will be seen from what mine many of the dancing measures which figure in the scores of '*Orphée*,' '*Armide*,' '*Iphigénie en Aulide*,' were drawn. Something, however, more in the Greek spirit might have been devised than the steps and groupings at the Grand Opéra, which strike us as discrepant with the music and the story.—The management, lavish as it has proved

in "gilding the pill," for such a crude and indigestible work as 'Tannhäuser,' or such a puerile piece of dilettantism as 'Pierre de Medicis,' has been on this occasion parsimonious in the matter of scenery, which is familiar,—and to boot, Roman.—M. Carvalho was more tastefully liberal at the Théâtre Lyrique, when 'Orphée' was brought forward.

To give an account of the reception of 'Alceste' is, this week, impossible. The above notes on a work already made familiar by closet study have been taken during a series of rehearsals, winding up with the last one, which was in every respect a complete performance;—offered (as is French opera usage) to the critics and connoisseurs. We have small misgiving as to the result. Be it greater or less, however, this revival is intrinsically the most important and interesting event in the musical year 1861: one which may—must—lead to others of the kind in Paris.—In London, as Mr. Gye's attempt on 'Orfeo' showed, pretext at classicality is greater than managerial judgment, or reverence due to master-works so magnificent in their power to move, when adequately presented, as the five great operas of Gluck.

SADLER'S WELLS.—On Saturday the tragedy of 'Hamlet' was revived, and commanded a full house. This announcement would not have imported much under ordinary circumstances; but, coming after so decided and successful a revolution in theatrical ideas of the character so boldly undertaken by a foreign artist, it compels some comparative remarks. Fortunately for such an occasional purpose, the *Hamlet* of Mr. Phelps is the least stagey of modern assumptions of the character. It is honourably distinguished from other stage-ports in at least this negative particular. It has also some positive merits. It is a thoughtful, well-studied and most conscientious piece of acting. Mr. Phelps's style has of late also changed for the better. It is much less declamatory and irregular than it used to be, and he cultivates more the softer tones of his voice. It may be objected that his present subdued style is not so salient as his more demonstrative manner; that his portrait of the princely Dane is consequently too much of an indian-ink drawing, where the shading and outline are definite enough, but in which light and colour are wanting;—nevertheless the gain is great in the more evident aim at an artistic purpose, at careful delineation, and the achievement of an intense expression answerable to a deeper and more subtle feeling. The quiet elocution is certainly somewhat oppressive from its monotony, but it is perfectly consistent with taste and judgment. Now in many of the above particulars Mr. Phelps's *Hamlet* may compare with M. Fechter's; but there is much more in which they may be contrasted. This last distinguished artist is never monotonous, because his emphases, action and attitudes are all natural, not affected. Mr. Phelps uses more action, but too frequently he repeats the same; and the excessive use of his right arm and hand sometimes offends in a remarkable way. Often the indicating action precedes or follows the phrase instead of accompanying it; whereas in a purely natural delivery the two cannot help being together. Mr. Phelps, too, introduces less business into the situations; but in this he may be right. It is very justly questioned by our best Shakspearian actors, whether the performer should add to the poet's stage directions, however ingenious or effective may be the invention. That the poet has done enough in this way is clear from the fact, that the traditional business of his dramas has been found sufficient for exciting and interesting audiences of every shade of cultivation. M. Fechter, besides, impersonates the part which Mr. Phelps and other English artists never attempt. Such parts as *Hamlet* are not considered in the English green-room as character-parts, as portraits to be realized, but as ideal characters of which some general conception is to be formed; in which, in fact, the universal is of much more importance than the individual. Altogether, Mr. Phelps's *Hamlet* is an equitable, well-sustained and not inelegant expression of one of the finest of Shakspearian ideas; and it speaks much in favour of the taste of the theatrical public, that his perform-

ance is still capable of crowding the house to the ceiling.

PRINCESS'S.—A new comediotta was produced last week, entitled, 'Jeannette's Wedding.' It has been adapted from the French operetta of 'Les Noces de Jeannette,' which, with Victor Masse's music, was performed at Covent Garden last November, under the title of 'The Marriage of Jeannette.' Divested of its operatic attractions, it forms a pleasant little anecdote piece, in which Miss Maria Harris supports the character of the patient wife very gracefully, and Mr. Widdicombe, as her irritable husband, is exceedingly ludicrous.

STRAND.—Two new pieces have been produced at this theatre; one not altogether new, and the other not altogether happy. Mr. Adolphus Charles Troughton has given a second version of a French vaudeville, which many years ago Mr. Haynes Bayly translated for the Adelphi, under the title of 'How do you Manage?' Mr. Troughton's version is named after his heroes, 'Short and Sweet.' The second new piece is by Mr. Stirling Coyne, and is entitled 'The Full Particulars of that Affair at Finchley.' The dramatic action is very slight, though put together with elaborate care, and we doubt whether it is sufficient to support a really dramatic interest. Miss Marie Wilton assumes a highwayman's costume in order to frighten her guardians into consenting to her marriage with the partner in her little plot. The incidents contrived for the embodiment of this eccentric notion are clever; but, beyond enabling the actress to exhibit some skill in assumption and characteristic by-play, are not exceedingly effective. Some signs of disapprobation followed the fall of the curtain.

ST. JAMES'S.—This theatre opened on Monday, with a numerous audience. The pieces performed were, 'A Cozy Couple,' 'A Scrap of Paper,' and 'Done on both Sides.'

MUSICAL AND DRAMATIC GOSSIP.—With next Monday the business of our musical season begins, in the opening of the English Opera at Covent Garden Theatre, with an entirely new work—'Ruy Blas.'—The programme of Miss Louisa Pyne and Mr. Harrison is a treasury of promises—since it announces the following novelties as likewise forthcoming:—'The Toymaker,' an operetta, by George Linley; an operetta by Tom Taylor and F. Clay; 'The Puritan's Daughter,' an opera, by J. V. Bridgeman and M. W. Balfe; an operetta by F. Maddison Morton; a romantic opera by John Oxenford, Dion Boucicault and Benedict; an opera by J. R. Planché and W. Vincent Wallace; an opera by John Oxenford and Macfarren; and the English version of 'Faust,' by M. Gounod.—It seems so difficult a task to bring forward such a vast amount of untried music as the above, before April day, that we cannot but inquire, whether the advertisement is not vague in its wording, and may refer to coming seasons?

The Hanover Square Rooms have changed owners, and we understand that a considerable sum of money is to be spent on their decoration.—It would be well if some re-arrangement was attempted—such, for instance, as would throw the side room into the concert hall. An architect of taste and fancy might do this, so as to produce a good effect, though with the inevitable sacrifice of symmetry.

Mr. E. T. Smith is about to "be up and doing" again at Drury Lane, at which theatre Mr. G. V. Brooke, with some Australian celebrities, and subsequently Mr. and Mrs. C. Kean, are to appear.

Rumours are already wandering about the Boulevards of Paris as to Mr. Gye's plans and engagements for next season. Signor Graziani, it is said, will not return to the Royal Italian Opera. Treaties are described as being on foot with Madame Gueymard and with M. Obin of the Grand Opéra, it being intended to revive M. Meyerbeer's 'Robert,'—although that opera has never been fortunate in England, even when it had "the lift" of Mlle. Jenny Lind's first appearance.—The amount to which our Opera houses (in common with those

of all Europe) are becoming Frenchified,—not merely in the matter of music, but of actors and singers also,—must, as a remarkable fulfilment, strike all who recollect how, twenty-five years ago, writers were sneered at and decried who called attention to the musical stage of France.

A few paragraphs may be added to the notices of opera plans and prospects in Paris published last week.—In correction of an announcement sent to a contemporary "by our Paris Correspondent," it may be mentioned that the revival of 'Pierre de Medicis,' and the *début* at the Grand Opéra of M. Faure, only took place on Monday last,—and not a fortnight earlier, as is on record.—There is little occasion to talk to London of an artist so highly gifted, so conscientious, and so resolute to improve as the French baritone,—who, by the way, has derived no small gain from his practice on our Italian stage. Nothing could be more complete than his success, or warmer than his reception. Seldom has a change of occupation answered so well as in this gentleman's case. By the side of M. Gueymard (who has stood still), and of Madame Gueymard-Lauters (who has kept her husband company in so doing), he appeared to great advantage as a finished artist with a style. In the lady's case this supineness is to be regretted;—for a more lovely *soprano* voice than hers is not now on the stage. Of Prince Poniatowski's music we have not till now spoken; nor, indeed, could it be made matter for ten words of criticism had it not been produced in such a theatre as the Grand Opéra of Paris. Well may national composers, famishing for an opportunity of distinction, bitterly feel "how fine a thing it is to be a Prince," when they hear the most feeble platitudes of the modern Italian school applied to the poorest of books, not only tolerated, but applauded by zealous myrmidons of the establishment, and count the time and cost bestowed on dressing and framing so paltry a production. Madame Ferraris dances brilliantly in the *ballet*.—Of 'Alceste' a separate report is offered.—The corps of the Grand Opéra stands in admitted need of being renewed and strengthened. Two new tenors are to be tried there—M. Loualt and M. Morère.—M. Massé, we are told, is writing a new opera for the theatre.—While bringing up the record of a period of famine to the time present, the newest ballet, 'Le Papillon,' contrived by Mlle. Taglioni for Mlle. Emma Livry, claims a word. That thoroughly-trained young dancer may be said to have kept her ballet ground as first favourite—her throne having been lately jeopardized by a stranger from Russia, Madame Petipa. Mlle. Livry's achievement has been made the more difficult by the uncouth dryness of M. Offenbach's music. For a spider romance, or "the dismal tale of a death's-head moth," it would have been appropriate.—While hearing it the real value of Adolphe Adam as the composer of 'La Fille du Danube' and 'Giselle' came into relief. Ugliness in dance-music, be the science ever so queer and transcendental, is a sin for which there is no pardon.

It sounds like a passage in a farce, but we are seriously told that Herr Wagner's congregation speak of his late appearance in Paris as a triumph; on the score, perhaps, of all discord being harmony ill understood.

Wherefore not "concealed success," as well as "concealed melody," which we have heard claimed as his *Eureka*? Persons go on to assert, that there is a chance of his 'Flying Dutchman' being given at (or forced on) the Opéra Comique of the French capital during the winter. If so, a question of copyright and copywriting may turn up. Years ago the book and the score (the former also by Herr Wagner) were offered to the Grand Opéra. The managers were alive to the poetry of the story, and dead to the "concealed poetry" of the music. So they made the former their own, and it was re-set by M. Dietsch, the present conductor of the orchestra.—The tale reminds us of the reception of Paer's 'Leonora,' by Beethoven. "I like your opera," said the rude Hermit of Vienna, "and shall set the book to music."—Meanwhile the Opéra Comique, is, we fancy, tolerably safe from the old original 'Flying Dutchman,' let who will command or intrigue for it.

MISCELLANEA

What is a Pistil?—A critic in the *Athenæum* (Aug. 10) pronounces that "every tyro should know that no flower can have more than one pistil; the name designates the whole female apparatus. *Pistillum intra antheras communiter collocatur*, is the definition of Linneus, who called its parts, when it consists of more parts than one, *germina*,—a term now replaced by *carpella*. We must, however, add, in fairness to the author (Mr. Johnson), that he does not stand alone in this misconception."....The paragraph cited from 'Phil. Bot.' 111, is not Linneus's definition of the pistil, but his statement as to its situation; in the very context of which phrase Linneus moreover asserts the identical view which the critic imagines him to repudiate.....For the Linnean definition of *Pistillum*, and for the proof that the term *germen* does not answer to *carpellum* (but to *ovarium*), see 'Phil. Bot.', 86, iv. 102.....To bear out his view, the critic should have appealed not to Linneus, but to Tournefort, who apparently introduced the word *pistillum* into botany, and who defines and describes it (Inst. p. 70) as a single body, as it most commonly is—and who named it accordingly (the *pistillum* in the flower being likened to the *pistile* in the mortar), but who nevertheless uses the term in the singular for the female organs collectively when more than one. The French botanists have naturally inclined to follow Tournefort; but as this usage could not be followed with perspicuity and consistency, they practically abandoned the word *pistillum*, and fell in consequence into the inconvenience of putting a part for the whole.....It is our opinion that Linneus rightly corrected the ambiguity or looseness of Tournefort in the use of his own term *pistillum*; that there are no good grounds, etymological, historical, or practical, for using the term as synonymous with *gynæcium*; and that scientific accuracy and convenience, such as is now required, are best reconciled with classical authority by employing the terms—*Gynæcium* to denote the female apparatus of a flower, as a whole, whether simple, single, or multiple; *Pistillum*, to denote each body of the gynæcium, whether one or more, distinguishing the pistillum into *simple* or *compound*; and *Carpellum* (or *Carpidium*) for each foliar element of the gynæcium, whether combined or uncombined. Thus neither of the three terms is superfluous, and *pistillum* is kept in its primitive Tournefortian, and in its complete Linnean signification. A. G., Cambridge, Massachusetts.—[We are glad to find that amidst the din of war science has still leisure to think in the United States, and discuss little points of critical interest. We, however, take part with the *Athenæum*.....We attach no importance to the word pistil being employed by Linneus in the plural number, when used to express the common character of many different plants; he must then be understood to refer to the pistils of all those plants (500 pistils), and the singular number could not have been conveniently adopted.....When he said *pistilla differunt quoad numerum*, his meaning must be taken from the context, where he expressly declares (§ 102) that he judges of that number by the styles, if there be any, or by the stigmas. He surely cannot have meant that a *Silene*, for instance, has three separate pistils in each flower; all he meant was, that the female apparatus has three stigmata.....One circumstance is to us conclusive. In defining a Strawberry, Linneus wrote *Pist. Germina numerosa, &c.* Surely by all the rules of construction it would have been *Pistilla numerosa, &c.*, had the separate parts of the female apparatus been intended to be called pistils. As the definition stands we can only translate it Pistil (consisting of) numerous germens. We cannot say that we are admirers of the word Pistil, for which Gynæcium is better substituted; but we must contend that if used at all it ought to bear the meaning given it by Tournefort and Jussieu expressly, and as we think by Linneus himself, if his words are rightly interpreted.]—*Gardeners' Chronicle*.

THE CYCLOPÆDIA OF ARTS AND SCIENCES.

*. * For full details, see Prospectus, which may be had from the Publishers, or through any Bookseller.

"As regards the contents of this Cyclopædia, it is, however, impossible to give any sufficient impression of an aggregate which includes somewhere or other all the information generally required upon every conceivable topic. A good Encyclopædia, as everyone knows, is a compendious library; and, though students may require further information upon some points than its summaries contain, even students will be surprised, in this instance, to find the materials at their disposal when they once adopt the habit of resorting to its pages. For all practical purposes, a large proportion of the articles may be said to be exhaustive. They are accurate to a degree, which will strike even those who knew what pains have been taken to render them so; and, as they are concise as well as full, every column being rammed like a sky-rocket, the owner has a reservoir out of all proportion to the library-shelves it will occupy."—*Times*, Oct. 4, 1861.

"Upon the whole, then, we are able to speak very favourably of this new Cyclopædia. Its great recommendation is not its comparative cheapness (though the cost only averages about half-a-guinea a volume), but its originality, completeness, and general trustworthiness. We may express a hope that its enterprising Publisher will have no reason to regret his considerable venture. He is not likely, we think, to have to complain of want of patronage, if it is sufficiently remembered that any one of his four great Divisions may be purchased separately as a work complete in itself. Few may be able to afford the whole series; but there are many who will be glad to procure, for example, a Biographical Dictionary, while others will require, for their peculiar tastes or studies, the Geographical Cyclopædia, or that of the Arts and Sciences, or of Natural History."—*Saturday Review*, Sept. 28, 1861.

London: BRADBURY & EVANS, 11, Bouverie-street, Fleet-street, E.C.

Likewise Vols. 1 to 7, in boards, price 5s. each.

The New Education Minute.

This day is published, price 2s. 6d. boards,

POPULAR EDUCATION IN
ENGLAND.

Being an Abstract of the Report of the Royal Commissioners on Education. With an Introduction and Summary Tables.

By HERBERT S. SKEATS.

"Mr. H. S. Skeats's 'Abstract of the Report of the Royal Commissioners' is at once comprehensive, concise and clear. All the really important points, either as to matters of fact or of suggestion, are compressed into the compass of one small volume. Yet the arrangement is so good, that there is no consequent confusion or obscurity; while the outline of what has been done, is doing, or is proposed to be done for the formation of a sound and wide-spread education among the people, is simple, brief and intelligible, without being bald and uninteresting from its brevity. It is a useful work well done."—*Economist*.

In 4 vols. royal 8vo. price 5l. 8s.

BRITISH SEA-WEEDS NATURE-
PRINTED.

Containing 70 Coloured Nature-Prints, with Engraved magnified Dissections of the whole Species described in the Volume.

The Descriptions by WILLIAM G. JOHNSTONE and ALEXANDER ORBELL.

The 'Nature-Printed British Sea-Weeds' forms Four handsome Volumes in royal 8vo., consisting of 216 Plates, with the necessary Letter-press. Either Volume may be had separately. The price of each is 2l. 2s.

In 2 vols. royal 8vo. price 4l. 4s.

BRITISH FERNS NATURE-
PRINTED.

The Descriptions by THOMAS MOORE, F.L.S.

The work contains 132 Plates and 200 pages of Letter-press, and is completed in Two Volumes, royal 8vo., uniform with the 'Nature-Printed British Sea-Weeds.' Either Volume may be had separately. The price of each is 2l. 2s.

"For this kind of work Nature-Printing is exactly adapted. Every delicate and inimitable ramification is most attractively and accurately represented."—*Athenæum*.

This day is published, in 1 large vol. crown 8vo. price 2s.

HEALTH, HUSBANDRY, AND
HANDICRAFT.

By HARRIET MARTINEAU.

"Full of suggestiveness and sound practical knowledge. Altogether, the work is one of vast importance, and we earnestly recommend it to the notice of our readers."—*Press*.

NEW EDITION OF STEWART'S GEOGRAPHY.

Now ready, 3s. 6d. bound, with 11 Maps.

A COMPENDIUM of MODERN GEOGRAPHY, POLITICAL, PHYSICAL, and MATHEMATICAL: with a Chapter on the Ancient Geography of Palestine, Outlines of Astronomy and of Geology, a Glossary of Geographical Names, Descriptive and Pronouncing Tables, Questions for Examination, &c. By the Rev. ALEX. STEWART, LL.D. Eighteenth Edition, revised and enlarged.

* More than usual labour has been bestowed on this Edition of 'Stewart's Modern Geography,' in order to adapt it to the many important geographical discoveries and political changes of the last few eventful years. It is enlarged in size by the introduction of a considerable quantity of new matter, and by the use of a more distinct type; while advantage has been taken of the thorough revision to which every page was subjected to improve it in several other respects. Among the additions will be found an Alphabetical Table of the Chief Roots of Geographical Names.

Edinburgh: Oliver & Boyd. London: Simpkin, Marshall & Co.

8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.
 CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to £730,665 7s. 10d., all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

NEW GENERAL ATLAS.

DEDICATED BY SPECIAL PERMISSION TO
HER MAJESTY.

THE ROYAL ATLAS

OF

MODERN GEOGRAPHY.

IN A SERIES OF ENTIRELY ORIGINAL AND
AUTHENTIC MAPS.

By A. KEITH JOHNSTON, F.R.S.E. F.R.G.S.

Author of 'The Physical Atlas,' &c.

With a complete Index of easy reference
to each Map, comprising upwards of
150,000 Places contained in this Atlas.

Imperial Folio, half-bound in Russia or morocco,
price 5l. 15s. 6d.

"Of the many noble atlases prepared by Mr. Johnston and published by Messrs. Blackwood & Sons, this Royal Atlas will be the most useful to the public, and will deserve to be the most popular."—*Athenæum*, August 10, 1861.

"We know no series of maps which we can more warmly recommend. The accuracy, wherever we have attempted to put it to the test, is really astonishing."—*Saturday Review*.

"The culmination of all attempts to depict the face of the world appears in the Royal Atlas, than which it is impossible to conceive anything more perfect."—*Morning Herald*.

"This is, beyond question, the most splendid and luxurious, as well as the most useful and complete, of all existing atlases."—*Guardian*.

"There has not, we believe, been produced for general public use a body of maps equal in beauty and completeness to the Royal Atlas just issued by Mr. A. K. Johnston."—*Examiner*.

"In comparing this beautiful and valuable Atlas with previous collections, every one must be struck, not only by the immense advances in geographical knowledge, but by the greatly increased power of representing that knowledge to the eye in the course of the last thirty years."—*Economist*.

"An almost daily reference to, and comparison of it with others, since the publication of the first part some two years ago until now, enables us to say, without the slightest hesitation, that this is by far the most complete and authentic Atlas that has yet been issued."—*Scotsman*.

MUTUAL ASSURANCE WITHOUT INDIVIDUAL LIABILITY.

Extracts from the Report of the Directors for the Year 1860:—

Number of new Policies issued during the year, 988.

Assuring the sum of £481,331 1 10

Producing an Annual Income of 16,053 15 7

Making the total Annual Income, after deducting 50,112l. annual abatement in Premium .. 296,251 10 4

Total number of Policies issued, 23,573.

Amount paid in Claims by the decease of Members, from the commencement of the Institution in December, 1835 .. 1,034,268 5 4

Amount of Accumulated Fund 1,893,895 14 11

The effect of the successful operation of the Society during the whole period of its existence may be best exhibited by recapitulating the declared surpluses at the four investigations made up to this time.

For the 7 years ending 1843 the Surplus was £38,074 11 5

.. 5 years .. 1847 86,123 8 3

.. 5 years .. 1852 232,061 18 4

.. 5 years .. 1857 345,034 3 11

The next Division of Profits will be made up to the 30th of November, 1861. Policies effected prior to that date, if subsisting at the time of division, will participate in such profit for the time they may have been in force.

The Prospectus, with the last Report of the Directors, and with illustrations of the profits for the five years ending the 30th November, 1857, may be had on application, by which it will be seen that the reductions on the premiums range from 11 per cent. to 94 per cent., and that in one instance the premium is extinct. Instances of the bonuses are also shown.

Members whose premiums fall due on the 1st of OCTOBER are reminded that the same must be paid within thirty days from that date.

Sept. 1861.

JOSEPH MARSH, Secretary.

ACCIDENTS OF ALL KINDS,

AND FROM ANY CAUSE,

may be provided against by an Annual Payment of 3l. to the RAILWAY PASSENGERS' ASSURANCE COMPANY, which secures 1,000l. at death by Accident, or 6l. weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS.

ONE PERSON in every TWELVE insured is injured yearly by ACCIDENT.

75,000l. has been already PAID as COMPENSATION.

For further information apply to the Provincial Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 3, Old Broad-street).

ANNUAL INCOME, 40,000l.

CAPITAL, ONE MILLION.

WILLIAM J. VIAN, Secretary.

64, Cornhill, E.C., January, 1861.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY.—NOTICE OF REMOVAL.

NOTICE IS HEREBY GIVEN, that the BUSINESS of the above SOCIETY has been REMOVED from No. 14, Waterloo-place to their new and more eligible premises No. 101, CHEAPSIDE, E.C.

C. L. LAWSON, Secretary.

Sept. 30, 1861.

THE MUTUAL LIFE ASSURANCE SOCIETY (A.D. 1834).

39, KING-STREET, Cheapside, E.C., London.

Capital, 30,000l. Premiums only 395,000l.

Income 70,000l. Assurances 1,600,000l.

Bonuses average 2½ per cent. per annum on sum assured.

Profits divided yearly and begin on second Premium.

Twenty-seventh Annual Report and Accounts may be had.

CHARLES INGALL, Actuary.

NORTH BRITISH INSURANCE COMPANY.

Head Office—64, Princes-street, Edinburgh.

London Office—4, New Bank-buildings, Lothbury.

LIFE DEPARTMENT.

Policies opened before 31st December will be entitled at next Distribution of Profits in 1865 to rank for five years bonus.

PROGRESS OF BUSINESS.

Policies.	Sums Assured.
For five years, from 1853 to 1857 inclusive, the annual average was	307 £276,543
In 1858, the Policies issued	455 377,425
1859	605 449,913
1860	741 475,649

This increase in the business of the Company will, it is expected, beneficially affect the Bonus to be declared at next Division of Profits.

New and liberal conditions of Assurance have recently been adopted, particulars of which, together with Prospectuses and all necessary information, may be had as above, or will be forwarded.

ROBERT STRACHAN, Secretary.

4, New Bank-buildings, October, 1861.

STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED IN 1825.

Progress of the Company's Business.

The business of the Company has increased steadily year by year, until it has attained its present large amount.

THE STANDARD has transacted a larger amount of business, during the last fifteen years, than any other Office.

From 1845 to 1850 the Amount of Assurances effected was	£2,146,641 12 9
From 1850 to 1855 the Amount of Assurances effected was	2,492,988 6 7
From 1855 to 1860 the Amount of Assurances effected was	2,815,455 3 0
Total	£7,455,085 2 4

This is all first-class home Business, the Assurances being almost entirely, as stated in the Proposals for Assurance, effected in connexion with Family Provisions and Marriage Settlements.

The REVENUE of the Company was in 1845 ..	£103,371 3 5
" " " " 1850 ..	£169,151 16 4
" " " " 1855 ..	£237,450 1 9
" " " " 1860 ..	£304,161 13 7

The FUNDS at the date of last investigation (1860) amounted to £1,856,802 19s. 4d., showing an increase of 700,000l. since 1853; while during the same period the CLAIMS under Policies in consequence of death were upwards of Half a Million sterling.

SPECIAL NOTICE.

Advantage of Assuring before the 15th November, 1861.

A Policy effected before 15th November next will not only participate in the 7th Division of Profits to be made in 1865, but will secure one year's additional Bonus at all future Divisions over Policies of later date.

Profits of the Company

have been divided on six occasions, in 1835, 1840, 1845, 1850, 1855, and 1860, when large additions were made to Policies under the peculiar mode of Division adopted by the Company, which is essentially Tontine, affording very important advantages to Assurers.

Examples of Bonus Additions.

Date of Policy.	Sums in Policies.	Bonus Additions to 1860.	Sums in Policies, with Bonus Additions.
Nov. 15, 1830	1000	1115 0 0	2115 0 0
" 1835	1000	790 0 0	1790 0 0
" 1840	1000	515 0 0	1515 0 0
" 1845	1000	302 10 0	1302 10 0
" 1850	1000	123 10 0	1123 10 0
" 1855	1000	74 0 0	1074 0 0

Next Division in 1865, and every Five Years afterwards.

WILL THOS. THOMSON, Manager.

H. J. JONES WILLIAMS, Resident Secretary.

LONDON—52, King William-street, E.C.

EDINBURGH—3, George-street (Head Office).

DUBLIN—66, Upper Sackville-street.

The Medical Officer attends at the London Office daily at Half-past One.

THE
ALEXANDRE HARMONIUM,
 AT
CHAPPELL'S, 50, NEW BOND-STREET.

NEW ALEXANDRE HARMONIUMS.

	GUINEAS.
THE FIVE-GUINEA HARMONIUM, 4 Octaves, in Oak Case	5
THE SIX-GUINEA HARMONIUM, 5 Octaves, in Oak Case, with 2 Foot-boards	6

These Instruments are lower in price and superior to all other cheap Harmoniums.

THE NEW CHURCH HARMONIUM,
 WITH TWO ROWS OF KEYS.

THESE Instruments are a perfect substitute for the Organ; the upper keyboard has a Venetian Swell, and acts as a Soft or Choir Organ, on which a perfect diminuendo and crescendo can be produced; and the lower keyboard answers the purpose of a Full Organ. The tone of these Instruments more closely resembles that of an Organ than any Harmonium yet produced, being rich and pure in quality. The construction is of a simple character and not likely to be affected by damp, rendering them peculiarly suited to Churches. An additional blower is attached to each Instrument.

NO.		GUINEAS.
1.	EIGHT STOPS (<i>Three and a-half rows of Vibrators</i>), Rosewood Case	45
2.	TWENTY-TWO STOPS (<i>Six rows of Vibrators</i>), Rosewood Case	70
3.	TWENTY-TWO STOPS (<i>Eight rows of Vibrators</i>), Rosewood Case, 2½ Octaves of Pedals	85

ALEXANDRE & SON have taken out a new Patent for the Drawing-Room Harmonium which effects the greatest improvement they have ever made in the Instrument. The Drawing-Room Models will be found of a softer, purer, and in all respects more agreeable tone than any other instruments. They have a perfect and easy means of producing a diminuendo or crescendo on any one note or more; the bass can be perfectly subdued, without even the use of the Expression Stop, the great difficulty in other Harmoniums.

THE DRAWING-ROOM MODEL

IS MADE IN THREE VARIETIES:—

NO.		GUINEAS.
1.	THREE STOPS, Percussion Action, additional Blower, and in Rosewood Case	25
2.	EIGHT STOPS, ditto ditto ditto	35
3.	SIXTEEN STOPS, ditto ditto Voix Céleste, &c. (<i>The best Harmonium that can be made</i>)	60

Messrs. CHAPPELL have an ENORMOUS STOCK of all Varieties of the ordinary kind, which are perfect for the Church, School, Hall, or Concert-Room:—

NO.		GUINEAS.	NO.		GUINEAS.
1.	ONE STOP Oak Case	10	7.	ONE STOP (<i>With Percussion Action</i>) Oak Case	16
2.	Ditto Mahogany Case	12		Rosewood	18
3.	THREE STOPS ... Oak, 15 guineas; Rosewood	16	8.	THREE STOPS ditto	Rosewood 20
4.	FIVE STOPS (<i>Two rows of Vibrators</i>) ... Oak	22	9.	EIGHT STOPS ditto	Oak or Rosewood 32
	Rosewood Case	23	10.	TWELVE STOPS ditto	Oak 40
5.	EIGHT STOPS ditto Oak, 25 gs.; Rosewood	26	11.	Ditto ditto	Rosewood 45
6.	TWELVE STOPS (<i>Four rows of Vibrators</i>)		12.	PATENT MODEL ditto	Oak or Rosewood 55
	Oak or Rosewood Case	35			

Testimonials from the Professors of Music of the Universities of Oxford and Cambridge, the Organists of St. Paul's and Westminster Abbey, the Professor of the Harmonium at the Royal Academy of Music, &c. &c., together with full descriptive Lists (Illustrated), may be procured on application to

CHAPPELL & CO., 49 and 50, NEW BOND-STREET.

Editorial Communications should be addressed to "The Editor"—Advertisements and Business Letters to "The Publisher"—at the Office, 20, Wellington-street, Strand, London, W.C.
 Printed by JAMES HOLMES, of No. 4, New Ormond-street, in the county of Middlesex, at his office, 4, Took's-court, Chancery-lane, in the parish of St. Andrew, in said county; and published by JOHN FRANCIS, 20, Wellington-street, in said county. Publisher, at 20, Wellington-street aforesaid.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh;—for IRELAND, Mr. John Robertson, Dublin.—Saturday, October 19, 1861.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1774.

LONDON, SATURDAY, OCTOBER 26, 1861.

PRICE
THREEPENCE
Stamped Edition, 4d.

NOTICE.

The price of THE ATHENÆUM from October 5 is THREEPENCE.

Thirty years ago, when THE ATHENÆUM came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price, and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing the size of the paper without increase of price, until the average has become about sixty columns of literary matter, with forty columns of advertisements, selected so as to be of general interest.

The Proprietors, taking advantage of the abolition of the Paper Duty, therefore resolved that the price of THE ATHENÆUM should from October 5 be THREEPENCE.

KING'S COLLEGE, LONDON.—The Council are ready to RECEIVE APPLICATIONS from Gentlemen who may be willing to offer themselves for any of the following Offices, viz.:

- The Professorship of the Arts of Construction.
- The Professorship of Geometrical Drawing.

October, 1861.

GEOLOGY AND MINERALOGY.—Elementary Collections to facilitate the study of these interesting branches of Science, can be had at 5*l.*, 10*l.*, 20*l.*, 50*l.*, to 100 Guineas each, of J. T. ENANT, Mineralogist to Her Majesty, 149, Strand, London, W.C. All the recent Works, also Geological Maps, Diagrams, Models, Hammers, Microscopic Objects, &c.—Mr. TERNANT gives Private Instruction in Mineralogy and Geology.

FREE GRAMMAR SCHOOL of KING EDWARD VI. at MORPETH in the COUNTY of NORTHUMBERLAND.—THE TRUSTEES will proceed to the ELECTION of a HEAD-MASTER, on THURSDAY, the 30th day of NOVEMBER NEXT. Candidates for the appointment are requested to send in their Testimonials to ANTHONY CHARLTON, Solicitor, Morpeth, on or before the 30th day of November next. The Head-Master must be a Graduate of one of the English Universities, and a Member of the Church of England. He will be required to enter upon his duties on the 14th day of January next. The instruction to be afforded in the School shall be in the Ancient and Modern Languages, and Literature, and the Principles of Natural Philosophy, as more fully expressed in the scheme. The salary of the Head-Master is 180*l.* per annum, and a share of the Capitation Fees, and a Residence, which is adapted for Boarders. For further information application to be made to Mr. CHARLTON, Morpeth, October 14, 1861.

THE GOVERNESSES' INSTITUTION, 34, SOHO-SQUARE.—MRS. WAGHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools, to her REGISTER of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

TUTORS and GOVERNESSES.—Families requiring Tutors or Governesses may OBTAIN WELL-QUALIFIED INSTRUCTORS, both English and Foreign, by application to Mr. G. SKELLEY, 6, Adam-street, Adelphi, or 3, Hanover-street, Regent-street.

BRUNSWICK SCHOOL, LEAMINGTON. OXFORD MIDDLE-CLASS EXAMINATIONS.

The only First-Class Certificate awarded for the last two years at Birmingham, the Examining Centre for the Midland Counties, has just been gained by a Pupil of Brunswick School, Leamington. Three other Boys from this School passed their Examination. Prospectuses on application.

J. H. HAWLEY, Principal.

MILITARY EXAMINATIONS.—COMPE-
TITORS for Sandhurst, Woolwich, or the Staff College, and Candidates for Direct Commissions or Staff Appointments, are PREPARED in all the Branches (compulsory and optional) of their Programmes, at the Practical Military College, Sunbury, S.W.—Apply for Prospectuses, &c. to Captain LENDY.

THE COMMERCIAL, ENGINEERING, and SCIENTIFIC SCHOOL, beautifully situated near CHESTER. This School, recognized by the SECRETARY of STATE for INDIA, "as possessing an efficient Class for Civil Engineering," offers a sound English Education, and, in addition, Classics and the Modern Languages. Particular attention is given to Mathematics and Practical Chemistry. The Instruction in Drawing is on the system of the Department of Science and Art. Each Pupil is provided with a separate sleeping apartment.—For particulars, apply to the Rev. ARTHUR RIGGS, College, Chester.

ELUCUTION.—Mr. GEORGE VANDENHOFF, M.A. Author of 'The Art of Elucution,' gives INSTRUCTION to CLERGYMEN and all Public Readers or Speakers. "Quod magis ad vos pertinet et necesse malum est."—Hon. 11, Orchard-street, Portman-square.

FAMILY TUTOR.—A GENTLEMAN of much experience in Education, would be glad to undertake the CHARGE of several YOUNG PERSONS, of one family, or of two or more neighbouring families, whose guardians wish to educate them at home. Instruction in French and junior Classics and Mathematics, as well as in the ordinary branches.—Address X.Y.Z., Money-Order Office, Brecknock-place, Camden Town, N.W.

TO LADIES.—Mr. GEORGE MAC DONALD will RE-COMMENCE his CLASS for the STUDY of the ENGLISH LANGUAGE and LITERATURE, on FRIDAY, November 15, at 11 o'clock, A.M. The Class will meet every Friday till the end of June, 1862. Terms, Five Guineas, payable in advance. Tudor Lodge, Albert-street, Regent's Park.

A LADY, aged 25, is desirous of a RE-ENGAGEMENT as GOVERNESS in a GENTLEMAN'S FAMILY. Her qualifications are English, French acquired in Paris, good Music, the Rudiments of German, Singing and Drawing. Good references can be given.—Address L. C., Post-office, Farnborough, Bromley, Kent, S.E.

LADIES' PAINTING and DRAWING CLASSES.—Mr. DAVIS COOPER begs to inform his Friends and Pupils that his FIGURE and ELEMENTARY CLASSES will RE-ASSEMBLE on FRIDAY, November 1, 45, Upper Gower-street, W.C.

CULTIVATION of the VOICE and SINGING.—A LADY, having had considerable experience in proving and cultivating Voices upon the same method as the great Italian Masters, DESIRES A FEW MORE PUPILS. She has been accustomed to instruct in families of distinction both in Town and Country, to whom most satisfactory references can be given.—Address E. J. W., Messrs. Duff & Hodgson, 65, Oxford-street.

GERMAN, French, Italian.—9, OLD BOND STREET.—Dr. ALTSCHUL, Author of 'First German Reading-Book,' (dedicated to Her Grace the Duchess of Sutherland), &c. M. Philol. Soc., Prof. Elucution.—TWO LANGUAGES TAUGHT in the same lesson, or alternately, on the same Terms as one, at the pupil's or at his house. Each language spoken in his PRIVATE Lessons, and select CLASSES for Ladies and Gentlemen. Preparation for all ordinary pursuits of life, the Universities, Army and Civil Service Examinations.

GERMAN.—Herr J. LÜPSCHÜTZ, 20, Alfred-place, Bedford-square, W.C., late of the University of Berlin, having returned to Town, begs to announce that he has resumed, both at his own and at the private residences of pupils, his instruction in the German Language and Literature on combined principles of the Hamiltonian and Ahn's Systems. Finishing German Lessons in Correspondence, both commercial and general. Conversation, History of the German Literature, &c. All kinds of Translations, both from and into German, at a moderate charge.—Apply, either in person or by letter, as above.

FOR SALE.

NEWSPAPER AND JOB PRINTING ESTABLISHMENT.

THE BELFAST DAILY MERCURY, established by the late James Stumms in 1851, and circulating among the most respectable and influential classes in the North of Ireland.

In connection with the Newspaper there is an extensive Job-Printing Establishment, in perfect working order, and doing a first-class remunerative business.

The Premises, No. 10, Arthur-street, in which the above Business is conducted, were built specially for a Printing-office, and are in every way adapted for the purpose.

The publication of the Newspaper and the Job-Printing are carried on in the same Premises, but are otherwise independent concerns, and will be sold jointly or separately.

Further information can be obtained on application to JAMES CAMPBELL, Esq., Secretary, Ulster Printing Company (Limited), 10, Arthur-street, Belfast.

The Great Sale of Illustrated and Illuminated Works.

SOUTHGATE & BARRETT will SELL by AUCTION, at their Rooms, 22, Fleet-street, on MONDAY, November 18, and five following days (Saturday and Sunday excepted), the Entire Remaining Copies of Valuable and Choice

ILLUSTRATED and ILLUMINATED WORKS,

Children's Books and others, adapted for presentation, fitted to suit Large and Small Buyers, the following, amongst a variety of others, are included in this Sale.

The ART of ILLUMINATING, as practised in Europe from the Earliest Times, illustrated by Borders, Initial Letters, Alphabets, &c., selected from the British Museum, South Kensington Museum, and other important Collections. By W. TREVELL, with an Essay on the Art and Instructions as to its Practice in the Present Day, by M. DREW WYATT. 4to. splendidly bound (published at 3s. 10s.).

"* This magnificent and eminently serviceable work contains 102 Plates, all fully illuminated, and printed in colours and gold on vellum paper, and 104 pages of Text, surrounded by borders in colour. Containing the most recent and latest specimens given in the 182 pages, there will be found 1,000 illuminated Pictures."

PARADISE and the PERI. By THOMAS MOORE. 54 splendidly illuminated pages, small folio, elegantly bound, bevelled boards (published at 2s. 3s.).

"Moore's 'Paradise and the Peri,' gorgeously illuminated by Messrs. Owen Jones and H. Warren, executed on stone by Mr. Albert Warren, printed and published by Day & Son... Mr. Owen Jones has produced some of the most magnificent combinations of colour and design we remember to have seen. His borders are all dazzling, and many of exquisite beauty." *Athenæum.*

NOW FIRST PUBLISHED.

The PENITENTIAL PSALMS, richly illuminated. A small Volume illuminated with magnificent Borders on every page. The Illuminations, both Borders and Miniatures, are facsimiles, or adaptations, from the most remarkable pages of celebrated illuminated Manuscripts in the British Museum, the Bibliothèque Impériale, and other collections. By NOEL HUMPHREYS, Esq.

The whole reproduced by Messrs. Day & Son, in the most finished style of Chromo-lithography, under the direction of H. NOEL HUMPHREYS.

SCULPTURE in MARBLE, TERRA-COTTA, BRONZE, IVORY and WOOD. Selected from the Royal and other Collections. Edited by J. B. WARRING. 18 Chromo-lithographic Plates of the highest style of finish, and 31 Wood Engravings. 1 vol. folio, half-bound elegant, published at 2s. 10s.

RICHARDSON'S MONASTIC RUINS OF YORKSHIRE: containing upwards of 30 large and beautifully-tinted Views, together with the various Vignettes, Ground-plans, Details, Sections, and Arms, &c., of each Abbey. The complete Work, in 15 folio Parts (published at 12s. 12s.).

"Few works of lithographic Art have equalled this publication, and it is so difficult to point out by which it has been surpassed. The subject-matter can hardly be said to be local one, because the history of the places illustrated is, in fact, so intimately connected with the general history of England, that all Englishmen must feel an interest in what is described." *Times.*

The GRAMMAR OF ORNAMENT. By OWEN JONES. Being a series of 3,000 Examples from the Royal and other Collections. Fundamental Principles which appear to reign the composition of Ornament of every period; 101 Imperial Folio Plates, elaborately printed in colours and gold, and published at 12s. 12s.

THE HUMBOLDT LIBRARY.

MESSRS. S. LEIGH SOTHEBY & JOHN WILKINSON, Auctioneers of Literary Property and Works of Art, beg to announce that the Catalogue of this distinguished Library is far advanced in the course of preparation, by the direction of Henry Stevens, Esq., and will be DISPERSED by PUBLIC or PRIVATE SALE DURING the coming SEASON.

The Collection embraces magnificent PICTORIAL WORKS, including a copy of CHALCOPHAGIE du MUSÉE ROYAL, in 28 vols., presented by H.M.K. Louis Philippe; the Transactions of the various learned Societies; History, Geography, Voyages and Travels; rare and valuable MAPS; Works in every branch of Natural History, and more especially in GEOLOGY; an extraordinary assemblage of Publications respecting NORTH and SOUTH AMERICA; Works on Antiquities, Astronomy and Mathematics, Meteorology, Chemistry, Medicine and Surgery, Agriculture, Commerce, Mining, &c., including numerous privately-printed Treatises of the greatest rarity; Dictionaries and Grammars; Philological and Critical Publications; Belles-Lettres, &c. &c. in the English, French, German, Polish, Russian, Spanish and Oriental Languages. Amongst the more covetable Articles are all the Works of Baron Alexander von Humboldt himself, enriched with his Autograph Additions; Lalande's Astronomy, the author's own copy, with many hundred most valuable Annotations; the Diplomas of above 160 Learned Societies of which he was a Member, with their Autograph Signatures, by Emperors, Kings, and the most Learned Men of the Age. The numerous Scientific Notes are enriched with the Autograph Notes not only of the Writers themselves, but also of the BARON HUMBOLDT, who was universally known as "THE MASTER OF SCIENCE." This Collection may be considered the most complete in Scientific Books of the present century ever offered for Sale.

The magnificent Marble colossal BUST of the learned Author of Kosmos, by David d'Angier, will also form an important item in this extraordinary Collection.

The celebrated HUBER Cabinet.

MESSRS. S. LEIGH SOTHEY & JOHN WILKINSON, Auctioneers of Literary Property and Works connected with the Fine Arts, will SELL BY AUCTION, at their House, 15, Wellington-street, DURING THE MONTH OF MAY, the unique COLLECTION OF GREEK and ROMAN COINS, formed in the Levant during the last twenty-five years, by the highly-distinguished and well-known Collector, the Hon. Imp. Counsellor C. G. HUBER, of Vienna, late Consul-General for Austria in Egypt.

The CABINET comprises 216 examples in Gold, 2,224 in Silver, and 7,700 in Copper and other Metals, including more than

SIX HUNDRED UNPUBLISHED COINS.

Amongst numerous other distinguished rarities are two Varieties of Camarina, with Leda on the Swan; Lacydon-Massilia; Antona; Tyra; Syracusan tetradrachm with the head of Arethusa; Acanthus; Bialta; Philippi, in gold; Terone; unique Coins of Ala and Doki; Magnesia; Larissa-Cremaste; Lycotus of Peonia; Chalci; Mende; Amyntas III.; Monodius; Damastius; Athens, in gold; unique Statues of Cius, in gold; Tetradrachm of Alexander (Roxana, fil.), with skin of the Elephant; Ephesus; Palesne-Cephalonia; Aspensus; Colbas; Tityanus; Carallia; Tabala; Irenopolis; Anoyra; Dionysopolis; Eumenia; Neronias; Sephoris; Thibrias; Ninive; Lycian Coins; Persian Satraps; Antiochian Coins of Psephenus-Niger, &c.; Alexandrian of Otho; Gordian Africanus; Tranquillina; the Head of Anna Faustina; Zenobia; Ptolema; Arincoe; and Berenice, in gold; more than forty fine Nomos of Egypt, &c. &c. Various amongst the Roman Gold, Silver and Copper, are also fine and unissued, as are many of the Greek Medallions in Copper.

Further notice of this important Sale will be duly given.

Philosophical Instruments, Jewellery, Books, &c.

On the 1st and 15th of every Month, in fcap. 8vo. paper covers, in the French Style of Binding.

THE SHILLING VOLUME LIBRARY.

The CHANCELLOR of the EXCHEQUER, when proposing the Repeal of the Paper Duty, used as an argument for its removal the superiority both in paper and print of French popular Literature over the same class of works produced in England; and he attributed the reason of this difference to the fact that paper was untaxed in France, while it was taxed in England. Happily this distinction no longer exists. On 1st October paper became free of Taxation. Therefore the

SHILLING VOLUME LIBRARY

is projected with the view of giving to the reading public the full benefit of the abolition of the Paper Duty. Each book in the

SHILLING VOLUME LIBRARY

will present to the buyer the utmost possible value both in quantity and quality.

The Original Works of Contemporary Writers will be given in the

SHILLING VOLUME LIBRARY,

set up in new and bold type, clearly printed on good paper, easy to read, and well worth recurring to for re-perusal.

SHILLING VOLUME LIBRARY

Works of Imagination will have precedence; but books in other departments of Literature that are calculated to refine the taste and inform the mind, as well as to amuse, will not be overlooked. The greatest care will be taken, so as to render the

SHILLING VOLUME LIBRARY

in all respects unexceptionable reading both for the young as well as for the old.

The following will be ready on November 15—

1. FAMILY SECRETS. By WESTLAND MARSTON.
2. WHICH WINS—LOVE OR MONEY? By the Author of 'WHITEFRIARS.'
3. AMOS CLARK; or, the POOR DEPENDENT. A Story of Country Life in the Seventeenth Century. By WATTS PHILLIPS, Author of 'The Dead Heart,' &c.
4. LADY LISLE. By M. E. BRADDON. (Ready Dec. 1.)
5. CANARY BIRD. A Story of Town Life in the Seventeenth Century. (Sequel to 'Amos Clark.') By WATTS PHILLIPS, Author of 'The Dead Heart,' &c. (Ready Dec. 1.)

London: Ward & Lock, 158, Fleet-street.

On MONDAY, October 26, price 6d.

THE SIXPENNY MAGAZINE.

Now ready, post 8vo. price 12s. 6d.

THE SIGNS AND DISEASES OF PREG-

NANCY. By T. H. TANNER, M.D., &c.

"The book before us—written by Dr. Tanner, one of the medical officers to King's College Hospital, London, and the author of a text-book on Children's Diseases, as well as of several other works—ranks amongst the most valuable medical treatises which have appeared in England during the course of the last few years."

"A book which we feel it a pleasure and a duty to commend to the favourable notice of our associates as one which they will find easy in the reading, instructive in the learning, and profitable to their patients (and we hope to themselves) in the application."

British Medical Journal, Feb. 2, 1861.

Henry Benschaw, 358, Strand.

Just published, Second Edition, revised, 8vo. cloth, 15s.

OBSCURE DISEASES OF THE BRAIN AND MIND.

By FORBES WINSLOW, M.D. D.C.L. Oxon. "The most important work that has appeared in this country for many years on subtle affections of the mind and obscure diseases of the brain. The insidious symptoms of softening and paralysis of the brain are described at great length. 'Dr. Winslow has accurately detailed the stealthy, insidious, and, if unchecked, fearfully destructive progress of these types of cerebral disease. What an amount of bodily suffering and hopeless mental imbecility might be prevented if the practical and scientific views propounded in Dr. Winslow's work were generally diffused!'"

London: John W. Davies, 54, Prince-street, Leicester-square.

MORI'S 100 OPERATIC AIRS FOR VIOLIN, 1s. 6d.—"The airs are well chosen, and present an agreeable variety."—*The Musical World*. Mori's 100 Songs Without Words for Violin, 1s. 6d.; Mori's 100 Dances for Violin, 1s. 6d.

YE OLDEN TIME. By CARL FAUST, of Breslau. Polka Mazurka, splendidly illustrated, 2s. 6d.—"Carl Faust in 'Ye Olden Time' Polka is again brilliant and original."—*Stamford Mercury*.

London: Robert Cooks & Co. New Burlington-street; and of all Music-sellers.

INTERNATIONAL EXHIBITION.—Just published, price 1s., some ACCOUNT of the BUILDINGS designed for the INTERNATIONAL EXHIBITION of 1862 and future decennial Exhibitions, with Illustrations and a Map—CHAPMAN & HALL, 158, Piccadilly; and all Booksellers and Railway Stations.

PHILOSOPHICAL TRANSACTIONS.

THE FELLOWS of the ROYAL SOCIETY are hereby informed that the FIRST PART of PHILOSOPHICAL TRANSACTIONS, Vol. 151, for the Year 1861, is now published, and ready for delivery on application at the Office of the Society, in Burlington House, daily, between the hours of 10 and 4.

WALTER WHITE, Assistant-Secretary, R.S. Burlington House, October 21, 1861.

Now ready, in 8vo. price 2s. 6d. sewed,

CRCESUS, KING OF LYDIA: a Tragedy, in Five Acts. By MAJOR RICHARDS. Second Edition, revised by the Author.

London: Longman, Green, and Co. Paternoster-row.

Now ready, in post 8vo. with 2 Illustrations, price 7s. 6d.

WILD DAYRELL: a Biography of a Gentleman Exile. By JOHN KEMP, Esq., Author of 'Shooting and Fishing in Brittany,' 'Sketches in the South of France,' &c.

This day, price 1s.

NOTES on SHAKESPEARE. By JAMES NICHOLS, M.R.C.P. Eng.

London: William Skeffington, 163, Piccadilly, W.

NOW READY,

SERMONS. By JABEZ BUNTING, D.D. Volume I. To be completed in Two Volumes.

John Mason, City-road; and 68, Paternoster-row.

N.B. The Second Volume is in the Press, and will be published speedily.

Now ready, in fcap. 8vo. (with Map of Confederated Europe), price 7s. 6d. cloth.

THE NEW KORAN; or, Text-Book of Turkish Reformers, in the Teaching and Example of their esteemed Master, JAIDU MORATA.

The book of the Syrian prophet opens a gateway through what has hitherto been considered an insurmountable barrier to Muslim progress. It separates spiritual religion from dead forms and superstitions; offers a common ground of reunion to Christians, Jews and Turks; and promises to bring about, by moral and pacific means, a far more important reformation in the East than is likely to be effected by Abdul-Azis or the sword of the Wahabites.

London: George Manwaring, 8, King William-street, Strand.

PROFESSOR RANKINE'S PRACTICAL WORKS:—

MANUAL OF APPLIED MECHANICS. By W. J. MACQUORN-RANKINE, LL.D. F.R.S. &c. Regius Professor of Civil Engineering and Mechanics in the University of Glasgow. Second Edition. Crown 8vo. 12s. 6d. cloth.

MANUAL of the STEAM-ENGINE and OTHER PRIME MOVERS. Numerous Illustrations. Second Edition. Crown 8vo. 12s. 6d. cloth.

MANUAL of CIVIL ENGINEERING; comprising Engineering, Survey, Earthworks, Foundations, Masonry, Carpentry, Metal Work, Railways, Canals, Rivers, Waterworks, Harbours, &c. With numerous Tables and Illustrations. Crown 8vo. 12s. 6d. cloth.

Griffin, Bohn & Co. Stationers' Hall-court, London.

NEW WORK ON NATURAL PHILOSOPHY.

Part I. containing 75 pages and 50 Illustrations, price 1s. To be continued Monthly.

GANOT.—ELEMENTARY PHYSICS, Experimental and Applied. Edited by H. ATKINSON, Cheltenham College.

Part II. containing 4 Plates (two coloured), plain, 18s.; India paper, 2l.

ANATOMY of the External Forms of the HORSE; containing the MOUTH, LEG, and Front and Back Views of the Horse. By J. J. LUPTON.

Now ready, Vol. I. Part IV. No. 1, with Woodcuts, 10s.

CHEMICAL TECHNOLOGY. By KNAPP, RICHARDSON, and H. WATTS. Containing ALKALIES and ACIDS.

Catalogue of Scientific Works gratis.

H. Baillière, Publisher, 219, Regent-street. Baillière Brothers, 440, Broadway, New York. F. F. Baillière, Collins-street East, Melbourne.

France and England; Her Britannic Majesty's Consul in
West Africa; Author of 'A Pilgrimage to Meccah and
Medinah,' &c. With numerous Illustrations. 1 vol. 8vo.

On Wednesday, November 6,

Narrative of the China War,
1860, and of a Short Residence among the Rebel Forces at
Nankin. By Lieutenant-Colonel WOLSELEY, 90th Light
Infantry, Deputy-Assistant Quarter-Master General to the
Expeditionary Force. With Portrait of Lieutenant-General
Sir J. HOPE-GRANT, G.C.B., Commander-in-Chief of the
Expeditionary Army. 1 vol. 8vo.

On Thursday, November 6,

Sketches of the Natural His-
TORY of CEYLON: with Narratives and Anecdotes illus-
trative of the Habits and Instincts of the Mammalia, Birds,
Reptiles, Fishes, Insects, &c., including a Monograph of
the Elephant, and a Description of the Modes of Capturing
and Training it. By Sir J. EMERSON TENNENT, K.C.S.
LL.D. &c. With about 100 Illustrations on Wood, from
Original Drawings. 1 vol. post 8vo.

Now ready, price 15s.

The Alps; or, Sketches of
Life and Nature in the Mountains. By Baron H. Von
BERLEPSCH. Translated by the Rev. LESLIE STEPHEN,
M.A., Fellow and Tutor of Trinity Hall, Cambridge.
With 17 tinted Illustrations, engraved on Wood, from the
Original Designs of EMIL RITTMEYER. 1 vol. 8vo.

Now ready, price 10s. 6d.

Boar; the Roe; the Red Deer; the Stag; the Fallow
Deer; the Capercaille, or Cock of the Wood; the Black
Cock; the Golden Eagle, &c. By CHARLES BONER,
Author of 'Chamois Hunting in the Mountains of Bavaria.'
With 6 Illustrations in Lithography and 12 on Wood, from
Drawings by GUIDO HAMMER, of Dresden. 1 vol. post 8vo.

Now ready, price 9s. 6d.

The Romance of a Dull
LIFE. By the Author of 'Morning Clouds' and 'The
Afternoon of Life.' 1 vol. post 8vo.

In a few days, New Edition,

Autobiography, Letters and
LITERARY REMAINS of Mrs. PIOZZI (THRALE).
Edited, with Notes, and some Account of her Life and
Writings, by A. HAYWARD, Esq. Q.C. Second Edition,
revised, with copious Additions. 2 vols. post 8vo. with
Portrait and Plate.

The additions to the present Edition comprise, amongst other matters, from fifty to sixty pages of fresh entries from Mrs. Piozzi's private diary (*Thraliana*), and interesting passages from her *Travel-Book*; a selection of her curious marginal notes on books, and copious extracts from Letters hitherto un-

published. So much light is thrown by this new matter, especially by the excerpts from *Thraliana*, on the alleged rupture between Dr. Johnson and Mrs. Piozzi, that the Editor has re-written that part of his Introductory Memoir which relates to this memorable literary quarrel.

Now ready, price 10s.

Jerusalem: a Sketch of the
City and Temple, from the Earliest Times to the Siege of
Titus. By THOMAS LEWIN, Esq., of Trin. Coll. Oxon.
M.A.; Author of 'The Life of St. Paul.' With 6 Illustrations. 1 vol. 8vo.

London: LONGMAN, GREEN, LONGMAN,
and ROBERTS.

LONDON, SATURDAY, OCTOBER 26, 1861.

LITERATURE

The Christian Church and Society in 1861—[L'Eglise et la Société Chrétienne en 1861, par M. Guizot]. (Paris, Lévy; London, Dulau & Co.)

As the presence of the warrior called Archimedes from his philosophical studies to the dread and imminent certainties immediately around him, so does the presence of an alleged assailing spirit, adverse to Christianity, invite the ex-Prime Minister of Louis Philippe to drop the Autobiography and the reminiscences with which he has been edifying a world of readers, and to consider the perils which in this year of grace menace the Christian Church and Society;—that is, threaten Christianity.

Such a voice as that now raised amid the thunders of contending factions, will be heard with respect, even by persons whose opinions may differ from those of the speaker. His impartiality of judgment is well known; and M. Guizot is not a man to render a verdict in his own favour if his conscience convinces him he is in the wrong. The philosophic statesman discerns a great danger ahead, and he warns all who are sailing in that direction. He does not treat of peril to a single church, but to the common Christianity. His signal is not displayed in order to save his own ship, but the entire fleet. He is not especially concerned for the Romish Church, nor for his own, but the Catholic Church, of which all Christians are members.

One of the perils, he remarks, to which this Church and Society are exposed, lies in the attempt which is being made by some well-intentioned writers to substitute what they call "Natural Religion" for the faith which believes in and worships what is altogether above Nature,—the supernatural, external and superior to matter;—that Supernatural which created man and placed him a man, and not a helpless child, in the Garden of Eden.

The second peril recorded here, is in the attempt made by other writers to set aside, as it were, the Deity revealed to man in Scripture, and to place above the ancient shrine an abstract God—an idol made up of pantheism, scepticism and the perplexities of erudition. This is an exercise of irreligious liberty which M. Guizot cannot sanction. The exercise of religious liberty obtained out of, rather than within, the Church, is to be used, but not abused. Its exercise is compatible, M. Guizot thinks, with the safety and union of all Churches. Distinct, yet not divided, and the hand of the State extended freely to all!—"Have we reached this consummation yet?" asks the writer. "Is the union of Church and State throughout the Christian world, and especially in France, all that it might and ought to be? Does the Christian Church—do all Christian Churches enjoy, in principle and fact, in their connexion with the State, all the liberty and guarantees to which they may rightfully lay claim? I am far from thinking it."

For this opinion M. Guizot has very excellent reasons. The French Protestant Church ranks, in the eyes of the government, very little above mere political *réunions*, to which permission might be given to assemble, but which permission may as easily be withdrawn as conceded. This is mere sufferance; and the Church lacks inward authority to enforce, as much as it does outward recognition to encourage. How this condition acts unfavourably on the established Church, the writer attempts to show, by stating that,—“in order that the spiritual authority

may be exercised firmly and without hesitation in the established Church, that Church must be able to reckon upon the full liberty of the dissenting Churches; and the free existence of the latter is indispensable, in order that authority may be exercised in the established Church with justice and moderation. If dissent were not perfectly free, orthodoxy would easily become oppressive. In the spiritual as in the temporal order, in the Church as in the State, power, to remain reasonable and legitimate, requires to be controlled and restrained by liberty.” Of the truth in this seeming paradox there can be no doubt whatever.

Whenever the Church and State have united their powers to oppose social liberty, M. Guizot shows that great damage has been the resulting consequence to both. Where the State attacks the Church, as he considers the Italian Government to be attacking the liberties of the Roman Church by attempting to suppress the temporal power of the Pope, he augurs very calamitous results. There is, even at this critical moment, he thinks, a grand opportunity for the Roman Church, if her chief would but proclaim and recognize the religious liberty of all Churches; but he is compelled, of course, to conclude that no advantage will be taken of an opportunity so glorious. That is no reason, he tells us, why, if she denies liberty to others, it shall be taken from herself! And here ensues the weakest passage in this highly-toned book, for M. Guizot asserts that the temporal power of the Church has been hers from the beginning, that it is part and parcel of the Church, of the faith, a very essential of the Romish religion; that to take it away is to deprive that Church of all liberty,—of a right, a possession, a property, to touch which in a damaging way is rank felony! He argues that it would be as reasonable for the French Imperial Government to prohibit the French Protestant Churches from employing their old synodal organization, as for a Sovereign to strip the Pope of his temporalities; and that for a King of Italy to add the Roman States to the kingdom which he already possesses, and, at the same time, pretend to sustain the Pope in his liberty as an Ecclesiastical Chief, and the Church in full liberty under his sway, is at once an insult and an injury. We accept such statements with all the respect which is their due, but we can neither indorse the premises nor acknowledge the conclusions.

In treating especially of the "Catholic Church in Italy" M. Guizot is unsparing in laying the lash on the eminent statesmen whose object it is to establish a free church in a free country. He speaks of the Kingdom of Italy as a mere conquest made for the benefit of Piedmont; and of the attempt to separate the temporal from the spiritual power of the Pope, as a political movement on the part of individuals who are uninfluenced by any religious motive whatever:—"Ce sont des puissances politiques qui l'ont suscité et qui l'exploitent à leur profit." The author does, indeed, notice some of the great men who have advocated a purely spiritual papacy, but he passes over Passaglia, the greatest and the latest of them all. He complains, too, that the Church herself has never been consulted, forgetting that recent Papal Allocution, which haughtily rejected all idea of consultation, pronounced a determination utterly to disregard any will but that of the speaker and his friends, and, in impotency of rage, menaced all opponents with now harmless thunder. M. Guizot, being a man of refinement and a philosopher, writes with more wisdom and more decency than his client

exhibits in speaking, but he is equally stringent in his assertions. According to him, to deprive the Pope of territorial sovereignty is a wrong committed against Roman Catholics all over the world, who would then, as he asserts, possess no guarantees for the liberty of their church. This is as strange an argument as that which makes of an act which shall confine the Pope to his spiritual profession an injury equal in its nature to what would be inflicted on the French Protestant Church if the Emperor deprived it of its synods and other portions of its religious organization. Here, however, no similarity can be traced. At all events, M. Guizot sees no trace of religious feeling in the men who pursue the former object. He thinks of them as Essex thought of Tyrone, "Thou speakest of religion! thou hast as much religion as my horse!"

With all the power of intellect and the skill to wield it possessed by this eminent statesman, he is most perplexed how to make application of these when he turns to compliment the French Catholic Church and clergy. He finds in the latter the true friends of liberty and society: that clergy has sung the *Domine, fac saluum* for every dynasty, but that was because they only troubled themselves about the salvation of souls, and not the politics of bodies of men. M. Guizot, of course, cannot help seeing that while they have arrogated liberty for themselves, they have denied it, as far as in them lay, to all other classes. That must now be forgotten. There is no longer a Gallican Church in France; M. Guizot avers that it has become ultramontane solely in the hope of successfully defending Christianity and itself. He even summons the Protestant churches to unite with their bitterest enemies in this work. "Protestantism is called upon now to defend the liberties of Catholicism at the same time with its own. It has now an admirable opportunity of exercising a liberal fidelity and a Christian charity, and of thus giving to the Catholic Church one of those examples which confer on the giver the right of claiming a just return. Catholics or Protestants, those who fail to recognize this situation, and neglect to follow the course which it prescribes, fall short of their religious duty and of their permanent interests, merely to enjoy the blind and temporary gratification of the passions." This is really a fine illustration of Coleridge's maxim descriptive of experience,—that it is like the stern-lights of a ship, which only illumine the track over which the vessel has passed. Such experience does not enable M. Guizot to navigate his bark over uncrossed seas. The Roman Catholic Church asks no such co-operation as that he suggests, would not accept it if it were offered, and would no more, if she could stoop to accept it, help her allies to enjoy the freedom won for herself, than the Southern States of America, after accomplishing their freedom by the help of brigades of slaves, would march them back to their homes, the chartered sons of liberty. The truth is, that this last great gift is not wanted by the Romish Church, except by the supreme authority. As a politico-religious body, that Church might say, as the Cappadocians said when Rome offered to make them free, "The Cappadocians will neither enjoy liberty themselves, nor will they tolerate it in others."

This amounts to all that M. Guizot can advance with regard to the condition and prospects of the Romish Church. He is not less singular and remarkable when treating of the question of Italy. The whole Italian revolution has gone wrong, in his sight, since the arrangements at Villafranca were peremptorily set aside. The Emperor rendered an immense service to Italy, and acquired, he thinks, very

little by it. Others think differently of the iniquitous annexation of Savoy and Nice. Prosperity is impossible, if the rights of the people be violated. M. Guizot stands by that device, and yet he approves of the taking of Savoy and Nice, because, you see, the interests of France are to be the first consideration! Then, he lets Austria gently down, resigns himself to what could not be helped, but mourns over the fall of those potentates—even the son of King Bomba, who fell by the grace of God and the will of the people. M. Guizot is perfectly convinced that if the ejected Princes had been allowed to remain on their thrones, they would have ardently co-operated in the cause of Italian freedom! At all events—and here ensues a very remarkable passage,—if all else were to go down in the shipwreck, it would have been well to rescue a Bourbon or two. “The House of Bourbon had no great natural intimacy with the House of Austria, and the former lately proved at Parma and at Gaëta that no reverse could cause it to lose the sentiment of its dignity and its grandeur.” It is not to be gainsaid that the Bourbons have always exhibited greatness under adversity; but which of them, except, perhaps, Louis the Eighteenth, was ever even moderate in prosperity? Nevertheless, M. Guizot records an entry in their favour; and as the Revolution of 1789 is only yet in progress, and not at its last act, he would naturally wish to see the virtuous people all in happy positions at the fall of the curtain.

There is one liberty acquired by Italy which M. Guizot cannot fail to recognize—religious liberty. A Protestant may worship there now in freedom. Yet M. Guizot is not satisfied. In this establishment of religious freedom, “the incoherence of facts is manifest and shocking.” The Romish Church has not *her* liberty; and, accordingly, this vaunted religious freedom is a sham! She has, however, at this moment more latitude of action in Italy than any other Churches. The latter being only tolerated, they cannot be said to be protected. Still, M. Guizot denounces all this as a hypocrisy—speaks sneeringly, we regret to say, of Garibaldi—and sighs for the re-establishment of the cold and cruel tyranny of Naples, to bring round again the happy, social and political enjoyments of the good old Bourbon time. “Italian unity” is to him a mere illusion and delusion—contrary to the geography and history, the memories and aspirations, of Italy! Under that device, we are told, Piedmont is only making assault on Italy in order to dethrone the Papacy!

Looking again over his subject, M. Guizot re-asserts that the abolition of the temporal power of the Pope will not only inflict irreparable injury on a Church for which such power, in its chief, has always been a necessity, rarely abused, and never tyrannically exercised, but it will deprive the world of making further progress in the cause of civil liberty! There is no argument added whereby to support the assertion, and we confine ourselves to the task of simply recording so strange an opinion held by so eminent a man. As for the appeal to universal suffrage, under the authority of which some of the changes have been accomplished in Italy, he judges it by its field of action in France, and declares it to be a gross fraud and violation of justice. By its means, the public right, the *jus gentium*, has been trampled under foot, and Mazzini and Cavour, whom M. Guizot affects to see as inseparable leaders of the Italians, have been united, he thinks, in effecting one work,—enthroning a democratic tyranny, and making revolution permanent in place of law! If Italy would secure national independence and a free government, the way is indicated to

the people. They must submit to an Italian Confederation,—that is, restore the runaway Grand-Dukes, recall the King of Naples, and place the Pope in the position of Chief of the Confederation; and felicity and freedom, peace and plenty will flourish in the land! History must be even worse than an old almanac to the Italians, if they could be won, by never so plausible a charmer, to such submission as is here indicated, to replace the scourge in the hands of the executioner, and say, “Smite, as of yore!” M. Guizot does not venture to say that the arms of France should have been employed in compelling the people to accept this conclusion, but he considers that the French government has been gravely in error by not using its influence to bring it about. Gravely in error indeed, for having interfered, perhaps, in Italy at all, as the allusion would seem to imply, when noticing that the aid afforded by Louis the Sixteenth to our revolted colonies in America was succeeded by a revolution in France, and the overthrow of the constitutional monarchy.

Finally, M. Guizot sees in the progress now attempting to be made in Italy, the most imminent peril to the civil and religious liberty, if not of the world, certainly of Europe. He sees this peril as a natural consequence of that progress being made only through a violation of the public right. Of the wrongs committed by the Italian governments on the people who endured them so long, so silently, so heroically, he says nothing, save by way of excuse, apology, or defence. The sum of this strange book is,—that we must all abandon the paths of revolution, to walk in the ways of law and of liberty, according to law. The Italian people certainly would not have entered on the former paths if their rulers had permitted them to enjoy the latter ways. But the sympathies of the writer are with the rulers, without wishing ill to the people. He eulogizes the King of Naples, but is silent with respect to the dungeons in which that perjured monarch kept enchained the brightest intellect, the wisest heads, and the bravest hearts of the realm. He enjoins Italy to act loyally towards Princes, who violated every law in the oppression of their people; and in his zeal for the preservation of the temporal power of the Pope, he is so eager to note every stringent measure of Piedmont as to forget altogether the Papally-approved massacre at Perugia, and the bandits who are daily sent from Rome commissioned to shed blood.

Altogether, this volume may be said to be one of the most perfect examples of special pleading ever put forth. It does not exhibit the lucidity and impartiality of the judge, nor the simply-rendered depositions of a witness, but the calm, earnest desire of an advocate to establish a case in which it is his fortune or pleasure to be a leader. He has persuaded himself that his case is a good one; hence the earnestness which exacts respect. But when M. Guizot writes a book, the prevailing assertion in which is, that if Protestant Churches will help the Pope to retain his temporal power, the Romish Church will, or may, aid Protestantism to possess the free exercise of all its rights, and to enjoy a full liberty in all its practices, he exposes himself to a flat denial from the lips of the Pope himself, and exhibits, for a man of so many memories, a remarkable forgetfulness of the past history of the temporal and ecclesiastical sovereignty of Rome.

The Channel Railway; connecting England and France. By James Chalmers. (Spon.)

Mr. James Chalmers is the greatest mechanical genius of the age. There can be no doubt about

it. We have his assurance of the fact. He is not one “of the favourites of Academus, children of wealth and comfort, reared behind the ‘sheltering wa’s and bields’ of Eton, Harrow, or Westminster, Oxford or Cambridge.” On the contrary, he has “gathered his scanty lore in humble life”: he tells us so, and comparing his lowliness of origin with that of Locke and the elder Stephenson, he intimates his intention of astounding the world with achievements which will render the works of those self-taught engineers almost insignificant. But though he is devoid of scholastic education, Mr. James Chalmers has devoted himself assiduously to the labours of the drawing-table. “The alphabet,” he assures us, “is too short to convey any idea of the rigid, searching scrutiny and study which I have given my project.” Indeed, for many months this resolute mechanic has had in his own private keeping as many as “forty-seven sheets of drawings and sketches labelled and put away.” Where Mr. Chalmers put his forty-seven drawings away he does not tell us; but, doubtless, he removed them to a great distance from the scene of his present operation, for he takes credit to himself for having brought them back again, even to the employment of “the whole energies of his mind.” The result, however, of the forty-seven sketches and the labour-pangs of the author’s energetic mind is, that for the trifling sum of 12,000,000*l.* sterling he is ready to connect England and France by a line of railway. The public has already been entertained with various projects to accomplish this feat. As far back as sixty years since, M. Mathieu proposed to the first Napoleon to tunnel under the Channel, and give the French the means of walking in upon their natural enemies through a cellar-door. And lately, since Robert Stephenson threw his mighty bridges over straits and rivers in Europe, Africa, and America, the madman’s problem of how to make a Channel railway has agitated scores of flighty, light-headed engineers, on both sides of the water. In 1856–7, M. De Gamond proposed a tunnel to be constructed in the following manner. First, thirteen islands were to be sunk in the Channel, materials for their construction being carried out to sea. These islands being formed, the next work would be to dig down through them to points below the bed of the Channel, and then from these thirteen points to tunnel right and left. Since the publication of M. De Gamond’s proposal, we have had other projects for tunnelling under the salt wall that defends our coasts. We have also had plans for submerging tubes under the water, and even a scheme for an arched roadway along the bottom of the sea. Some of these suggestions have been ingenious, and all of them daring; but for sheer fool-hardiness and ridiculous impudence, we have been favoured with nothing like the offer of Mr. James Chalmers to give the two countries an iron tubular railway of the following description:—

“The principal feature of the work is simply a strong iron tube reaching from shore to shore in the still depths of the Channel, beyond the influence of the storms that render the sea dangerous on the surface. It is supported by its own buoyancy, having a powerful tendency to rise; and is kept down by anchors or boxes attached to and surrounding it and filled with rough stone, both boxes and tube being covered by an embankment of similar material; and, as the current alternates up and down Channel with the rise and fall of the tide, the silt of the bottom carried by it against and into this embankment will fill up the interstices, and in a few years convert it into a solid impermeable mass having the appearance of a ridge reaching from shore to shore, about 150 feet wide at the base, 40 feet

high, and from 40 to 120 feet below the level of low water. In short, the materials of which this embankment will be formed, are the same as the French engineer proposed to use in forming his islands, through which he intended to penetrate to the bottom of the Channel. The tube will pass through three ventilators, one in mid-channel, and one about a mile from either shore: thus the main portion of the work will be 18 miles in length; and this divided by the deep-sea ventilator gives two sections of 9 miles each; consequently, a train can never be more than $4\frac{1}{2}$ miles from an opening; and from this point will be carried to each opening flues connecting with a chimney rising nearly 300 feet above the level of the roadway at the middle, and 200 feet at the other ventilators; and to insure sufficient draft to clear away all smoke and foul air, powerful machinery will be employed, if necessary, to force air to the parts most distant from the ventilators; which, returning along the flues, will carry away the smoke and vapour left by a passing train, and keep the atmosphere within the tube pure and pleasant; while the cleanly-painted light-coloured iron, and a thousand double lamps—one every 35 yards, will give a cheerful aspect to this ocean roadway, and render it an agreeable contrast to the noise and damp and darkness of an ordinary tunnel, or even the miles of uninviting scenery that often meet the eye in broad daylight. The noise in this tube can be reduced to the minimum; unlike tubular bridges suspended in the air, the sound and vibration of the iron will be deadened and neutralized by the equability and elasticity of the pressure without; and, as the situation of the roadway will admit of a perfectly united rail, the sensation travellers will experience on entering the Channel Railway will be akin to what we feel, after walking on a gravelly road with thin shoes, when we step upon the downy sward of a smooth green lawn."

Mr. Chalmers has made arrangements for the disposal of that little sum of 12,000,000*l.* which he hopes the public will have sufficient enlightenment to put in his hands. He can tell you to a fraction how much he means to spend on his "thousand double lamps," and how much on his "clean light-coloured paint," but he is very vague as to the data which cause his confidence in being able to construct his Channel railway, to travel in which will be like "stepping on the downy sward of a smooth green lawn." Before Robert Stephenson built his mighty tubular bridges, he caused gentlemen of high scientific attainments to carry out under his direction several distinct series of experiments. When the results of one set of experiments were ascertained, another series was entered upon. So stupendous and costly were some of these experiments, that the labour and money expended upon them do not cease to impress the mind, when they are placed by the side of the greater toil and capital consumed in the production of the tubes, to the formation of which they pointed the way. Such was the cautious progress of the great builder of Iron Bridges and the Inventor of the Tubular Railway. Mr. Chalmers, however, has no need of experiments. Give him his 12,000,000*l.* and he will do the business off-hand—floating iron tube, embankment, stone boxes, double lamps, light-coloured paint and all! The only difficulty this man of genius recognizes is how to get hold of the money. Where is that to come from? Twelve millions sterling,—a mere trifle to be thrown into the sea! Such is Mr. Chalmers's demand. Who will subscribe? Who ought to head the subscription? On this last point the distinguished engineer has no doubts:—

"Who should encourage the Channel Railway? The Queen of England. The lives of sovereigns are grand chapters in the histories of monarchical nations: other nations seldom live to have histories worth dividing: true, England's present chapter is already bright beyond historic precedent; and

small indeed is the chance left to the clear head, the daring arm, or loyal heart, that would add a flower to the wreath upon her monarch's brow: still, this enterprise completed in her day, will shine among the works that grace Victoria's reign, like the Koh-i-Noor among the crown jewels; and the minister who places the gem in her diadem shall fill a place in history second only to the Mistress whose name and glories his action will adorn."

Apart from the pure folly of the present project, the question which a perusal of the author's pages leads us to ask is, what good would a Channel railway do us? What recompense are we to have for 12,000,000*l.* expended? Surely not a cheaper means of communication with the Continent! The cost of such a line would preclude its owners from conveying the public under the Channel at lower rates than the steamboat now conveys them on its surface. And, even if one could cross by such a system from Folkestone to Boulogne, or from Dover to Calais for a franc or so less, what would be the good of such a reduction on the entire fare from London to Paris? Economy, therefore, is not the good to be achieved. What then is the benefit we are to purchase for 12,000,000*l.*? Mr. Chalmers answers the question. *The British public would avoid sea-sickness!*—

"We have only to glance at the rates of fares by the different lines to form an idea of the power of this same bugbear, and the effect it has upon the existing passenger traffic; and if we study the matter intelligently, we can form a tolerably correct and interesting estimate of the extent to which it operates as a hindrance. Passing by Southampton and Havre as too extreme for our purpose, the route by Newhaven and Dieppe is certainly the most direct and interesting between London and Paris; and yet, with very little difference in time—really nothing of any value, a day being lost by either—it can command but little over one-third of the Dover and Calais fares, though that by the South-Eastern Railway is the longest of the three principal lines. The cause of this disparity is apparent—short sea-voyage, less sea-sickness by the latter; the same cause makes a difference between the Dover and Calais and the Folkestone and Boulogne fares, in favour of the former; though the difference in sea-voyage is only a few miles, and the whole distance by the latter route, in reality the shortest."

And in the avoidance of an occasional visitation of sea-sickness, Mr. Chalmers thinks the British public would be greatly the gainers by his Channel road. We cannot agree with him. It appears to us that he regards this consideration of sea-sickness from a wrong point of view. The sensation of sea-sickness may be disagreeable, but its effect is in the highest degree salutary. It relieves the brain of foolish fancies, teaches humility to the proud, and gives a keen appetite to a jaded stomach. In the last century, the emetic was a favourite feature of medical regimen. Physicians prescribed it for almost every ailment; and delicate ladies, acting on their own responsibility, had recourse to it once or twice a week between dinner and supper. The practice has gone out of fashion, together with the habits that peremptorily demanded it. But there are still many amongst us whose giddy heads would be all the better for a good tumbling, accompanied by good, honest retching, on the ocean between Gaul and Britain. And amongst those who would reap especial good from such a tossing are shallow-pated engineers, who, without sufficient reason, would tamper with the salt-walls in which our national freedom has for so many generations been preserved, even as meat is kept pure and sound whilst it is well packed in brine.

Egyptian Sepulchres and Syrian Shrines, including some Stay in the Lebanon, at Palmyra, and in Western Turkey. By Emily A. Beaufort. 2 vols. (Longman & Co.)

JUDGING by this record of a lady's experiences upon a tolerably long tour, some future analyzer of our social condition and manners would conclude the women of this age to be models of common sense, possessed of elegant accomplishments, and happy in all the proprieties of good-humoured intelligence. How agreeable such reflections would be to the historian! Without such he would never believe in the fact of feminine creatures going forth to see the world without being dressed in knickerbockers, corresponding with learned Societies, and practically acquainted with the use of the revolver. Miss Beaufort is none of these; but, having made a tour full of varied personal experiences, and seen some seldom-seen things and places, has written a pleasant account of them for the benefit of those who may pursue the same course.

Reaching Alexandria, and chartering there a *dahabieh*—somewhat obnoxious to the suspicion of being what our yachtsmen would call a "wretched tub" in sailing qualities, but comfortable enough otherwise—the author and her sister crept up the Nile, saw what everybody else has seen, and is judiciously brief in her account of the often-described beauties. Brief as the descriptions of Nile scenery are, they might with advantage be more so, unless indeed—and this forms their charm—such accounts be received as agreeable chat from an intelligent friend, who has no idea of teaching her audience. It is no fault of Miss Beaufort's that the Nile is more common to us than Fleet Street; as, if it were not so, we should have been grateful for the clever and almost invariably effective sketches in which she dwells on the delights of the climate with a freshness that is charming, and with genuine grace describes the scenery of the "oldest land." Nor is she without a feeling for the fun of certain situations, in which a less happily constituted individual might have found indescribable woes. The account of Abou-Simbel is full of feeling for the glories of the place—a refined, and let us add, noble, recognition of the true grandeur of Egyptian sculpture, will be found under that heading.

Our travellers went above the Cataracts, and "did" the Nile thoroughly, returning from the uttermost point of their voyage, after a sojourn in a bug-haunted little craft, used for the higher parts of the river, and thence going to Edfon, found on getting back to the "Wandering Maiden" (so the slow *dahabieh* was entitled), that a thievish cabin-boy had set her on fire, laden as she was with all their valuables, food, clothes and money; and they had the misery of sitting on the bank to see everything they possessed consumed, and in the end to be dependent upon the kindness of some countrymen for a conveyance to Cairo—a seven weeks' journey, be it understood. Under these trying circumstances we find no pitiful whimpering or idle complaints, but a resolute, English power of making the best of circumstances that could not be remedied: not, however, without the signs, rather than the expressions, of grief at the loss of many a household treasure or acquired prize of the bold voyage itself. Of course, at the moment of the conflagration most of the sailors stood still, exclaiming "*Mashallah, Mashallah!*" and so forth, while nothing but "their own bread and bundles of clothes" was saved; and they even interfered to prevent the lady's-maid from attempting to rescue a

desk containing valuables. Englishwomen were no more helpful.—

"There was one very large *dahabieh* with a small party on board, which came down the river to Luxor while we were there:—they offered nothing of their own accord, but in our utter distress for some of the common necessities that gentlemen could not supply, we ventured to send our maid on board to ask for some common materials requisite for making up the clothes we had contrived out of Arab cotton; the reply to this our first essay in the art of begging was—the gift of *one hook and eye!* We sought for nothing more from that boat."

The ladies' zeal had been great in the beginning, but was so dashed by this catastrophe, that on the return southwards they determined to forego a sight of the Pyramids themselves, unless they could meet with a party of gentlemen going there likewise—so strongly were they impressed by stories of the turbulence of the fellahen. Going under the required protection, the entry into the great tombs was indeed a trial for more than manly nerves, noses and lungs; and it is with considerable satisfaction that the writer records her re-entry to upper or outer air. A short visit to the Sphinx produces the usual expressions of admiring awe and wonder. A visit to the Coptic Church at Cairo affords more novelty to the reader; the ceremonies of worship have not often been described. The Patriarch appeared in a gorgeous costume, and after the conclusion of a series of brief readings from the Gospel, first in Coptic and then in Arabic, by splendidly dressed little boys, he delivered a short but energetic sermon, stopping to admonish the inattentive portion of his hearers by public reproofs, thus: "Oh! ye donkeys, don't make a noise!" "Give more room to each other"—to those who crowded their neighbours. And again, "Oh! ye pigs, attend and listen!"

The burning of the "Wandering Maiden" brought further disasters upon her luckless hirers; for the owner, a dragoman, accused their servant of setting her on fire, and industriously bribed the courts of justice with a view to recovering the sum of 900*l.* damages. As the chance of getting even tolerable justice was very remote, when they were sued by a native in a native court, the ladies wisely determined to run away before an order for their detention could be served. A steamer received them, and a pleasant voyage past Rhodes and Patmos brought the fugitives to Smyrna. Here they were chance witnesses of the curious preparatory ablution, which was, not without need, performed previously to the Armenian Patriarch washing the feet of twelve of his suffragans on Maunday Thursday.

Latakia, Tripoli, Beyrout, followed; the last a halting-place where the ladies dwelt for some time, and whence they made excursions, settling themselves at Beit Miry, a rural heaven upon earth amongst the Druses, and other romantically reputed tribes. Great was the wonder created of these folks by the settling of two Frankish ladies amongst them. One of the excursions made from this centre was to the famous Assyrian and Egyptian sculptures—(war records of Sennacherib and Ramesis II.), at the mouth of the Nahr el Kelb—since destroyed, according to report, by the commander of the French expeditionary forces, in order that the name of Napoleon III. might take the places so long held by those of the conquerors of old.

An Introduction to the Trochilidæ; or, Family of Humming-Birds. By John Gould. (Printed for the Author.)

Four hundred and sixteen species of these most beautifully and variously coloured little birds are ever fitting about the world, and making a rapid movement of the wings, which produces a vibratory or humming sound, that may be heard at a distance of several yards, and that gives a name to the whole family. This common name is trivial enough, and not always applicable, yet everybody knows it, and the true title, *Trochilidæ*, is only a word for ornithologists. Much more poetical designations belong to the beautiful little creatures amongst the nations of South America, who metaphorically style them "*Rays of the Sun*," and "*Tresses of the Day-Star*," and "*Murmuring Birds*." They were partly known, or were first mentioned, in 1558; and the old naturalists who published their observations at the commencement of the seventeenth century made them better known; but it was not until the beginning of the eighteenth century that their natural history was, in any degree, really understood. The great primeval forests of Brazil and the vast palm-covered districts of the deltas of the Amazon and the Orinoco—the fertile flats and savannahs of Demerara—the luxuriant and beautiful region of Xalapa (the country of perpetual spring)—and other parts of Mexico, were long untrodden ground to the ornithologist; while there, and also amidst the Andean Mountains, which range along the entire country from the Rocky Mountains on the north to near Cape Horn on the south—along the whole of this great backbone of America, at remarkably short intervals, occur many species of this family of birds of great beauty and interest to the collector.

Frequent amongst those mighty and sombre mountains are these little sprites of the air, flitting about with swiftly-vibrating wings, as if in mockery of the great moveless masses of rocky matter around them, and almost seeming to defy the law of gravity that chains down the ponderous matter over which they themselves roam at will. Yet if they seem to defy the attraction of gravity, they find irresistible attraction in numerous insects, which accompany the particular Flora that adorn the sides of the mountains in equatorial regions. As each Alpine region has its peculiar Flora and insects, so it has also its peculiar attendant humming-birds, and these haunt and hum about the several appropriate zones of temperature which lie between the snow-line of the summits of the towering volcanoes and their bases. Many, too, of the highest cones of extinct and of existing volcanoes possess their own Faunas and Floras, and, consequently, their own *Trochilidæ*; and even in the interior walls of ancient craters, wherever vegetation has gained a place, there live certain species of humming-birds which have not yet been elsewhere discovered. Even the snowy Chimborazo may be said to be inhabited by these birds; for it is certain that one species (*Oreotrochilus Chimborazo*) haunts its sides just below the line of perpetual congelation. How frail and inadequate seems that little framework of tiny bones and feathers to encounter with impunity the cold blasts of those lofty regions, 16,000 feet in altitude, and exposed to almost perpetual sleet, hail and rain! Other cones, too, of great though comparatively less elevation, are reported to be frequented by species peculiar to each of them; and probably mountain-sides and summits yet untrodden hold other species, to be revealed and recorded in due time; so that from forested bases to snow-crowned tops—from hot valleys,

successively upwards through more temperate zones, until the heights of scarcely-abating winter are attained, there rise ever-flitting forms of magical beauty, hovering restlessly and humming rapidly, revealing richness of colour on the borders of unsullied snow, and carrying life and motion and inimitable ornament into the very rifts of volcanic ruin, unfolding for a fleet moment where no human eye beholds them hues as gorgeous as those of the rainbow, and making murmurous music even to the dull cold ear of desolation!

What colourings are those on the wings of the *Trochilidæ*!—how perfectly unrivalled by any art of man! Look only at their somewhat dulled and faded hues in our Museum and in our drawing-room cases, and even then you see what artist's brush can never reproduce. But how greatly more beautiful, and fresh, and sun-lighted must those resplendent colours be in the open sky, in the green forest, and on the mountain range! As you gaze more intently, you are delighted with those beautiful gorgets, succeeded by crescents of white, separating them from the green of the under surface; those thickly-feathered tarsi, with rich and luminous tail-coverts; and those shining metallic masks of plumage which adorn the faces of some species, and those armour-like brilliant feathers—brilliant when viewed from behind—which mail the lower parts of the backs of others; those spangles which deck the neck-plumes of this tiny creature, and those blue ear-tufts which, in another, so perfectly harmonize with the surrounding green of the neck; those plumed crowns which, for splendour and minuteness, might seem to be borrowed from fairy fables, and that remarkable forehead which (in *Helianthea*) is decorated with a star bright as Hesper—all these you may note in museums, and copy and describe them with convenience; but to behold them unfurling and fluttering and glancing gorgeously in the free light of day, this alone would give a true idea of the lavish beauty and the vast variety of plumose-painting which has been bestowed upon these miniatures of Nature—these enamels of Ornithology.

Arrayed in such and so varied beauty, it is to be supposed that, not only ornithologists, but also poets and general observers of Nature, have vied in attempting to describe what is really indescribable. Buffon has left a Frenchman's cabinet-picture of these birds, elaborately coloured. Audubon became quite poetic when he noted what he saw of humming-bird courtship. Mr. Waterton affirms that this bird "may truly be called the Bird of Paradise." "See it," says that gentleman, "darting through the air almost as quick as thought. Now it is within a yard of your face—in an instant it is gone. Now it flutters from flower to flower, to sip the silver dew; it is now a ruby—now a topaz—now an emerald—now all burnished gold!" Mr. Gould does not himself, at least in the present Introduction, attempt a picture, but he assures us that the pleasure which he experiences on seeing a humming-bird is as great at present as when he first saw one long ago; and he adds, "During the first twenty years of my acquaintance with these wonderful works of creation, my thoughts were often directed to them in the day, and my night-dreams have not unfrequently carried me to their native forests in the distant country of America." The Introduction which we here notice relates to the author's 'Monograph of the *Trochilidæ*,' now complete in five volumes. Respecting the colouring of his illustrations in the Monograph, he observes:—

"Numerous attempts had been made at various times to give something like a representation of the

glittering hues with which this group of birds are adorned, but all had ended in disappointment; and the subject seemed so fraught with difficulty that I at first despaired of its accomplishment. I determined, however, to make the trial, and, after a series of lengthened, troublesome, and costly experiments, I have, I trust, partially, if not completely succeeded. Similar attempts were simultaneously carried on in America by W. M. L. Baily, Esq., who with the utmost kindness and liberality explained his process to me; and although I have not adopted it, I must in fairness admit that it is fully as successful as my own. I shall always entertain a lively remembrance of the pleasant day I spent with this gentleman in Philadelphia. It was in his company that I first saw a living Humming-Bird in a garden which has become classic ground to all true Americans, from the pleasing associations connected with its former possessor, the great and good Bartram, and from its having been one of the haunts of the celebrated Wilson, than whom no one has written more pleasingly on the species of this family which inhabits that part of North America, the *Trochilus colubris*."

The flight and vibratory movements of these birds are interesting topics, and are thus admirably and curiously noted by Mr. Gould:—

"How wonderful must be the mechanism which sets in motion and sustains for so lengthened a time the vibratory movements of a Humming-Bird's wings! To me their action appeared unlike any thing of the kind I had ever seen before, and strongly reminded me of a piece of machinery acted upon by a powerful spring. I was particularly struck by this peculiarity in the flight, as it was exactly the opposite of what I expected. The bird does not usually glide through the air with the quick darting flight of a swallow or swift, but continues tremulously moving its wings while passing from flower to flower, or when taking a more distant flight over a high tree or across a river. When poised before any object, this action is so rapidly performed that it is impossible for the eye to follow each stroke, and a hazy semicircle of indistinctness on each side of the bird is all that is perceptible. 'The wind produced by the wings of these little birds,' says Mr. Salvin, 'appears to be very considerable; for I noticed that while an example of *Cyanomyia cyanocephala* which had flown into the room was hovering over a large piece of wool, the entire surface of the wool was violently agitated.' Although many short intermissions of rest are taken during the day, the bird may be said to live in air—an element in which it performs every kind of evolution with the utmost ease, frequently rising perpendicularly, flying backward, pirouetting or dancing off, as it were, from place to place, or from one part of a tree to another, sometimes descending, at others ascending; it often mounts up above the towering trees, and then shoots off like a little meteor at a right angle; at other times it quietly buzzes away among the little flowers near the ground; at one moment it is poised over a diminutive weed, at the next it is seen at a distance of forty yards, whither it has vanished with the quickness of thought. During the heat of the day the shady retreats beneath the trees are very frequently visited; in the morning and evening the sunny banks, the verandahs and other exposed situations are more frequently resorted to."

In discussing the place of the Trochilidæ ornithologically Mr. Gould states that they have certain characters, dispositions and modes of life which are not to be noticed in any other group of birds; and then remarks:—

"In their disposition they are unlike birds, and approach more nearly to insects. Many of the species fearlessly approach almost within reach of the hand; and if they enter an open window, as curiosity may lead them to do, they may be chased and battled with round the apartment until they fall exhausted; and if then taken up by the hand, they almost immediately feed upon any sweet, or pump up any fluid, that may be offered them, without betraying either fear or resentment at their previous treatment. A *Trochilus colubris*, captured for me by some friends at Washington (Baron Osten Sacken, Mr. Odo Russell and his brother Mr.

Arthur Russell), immediately afterwards partook of some saccharine food that was presented to it, and in two hours it pumped the fluid out of a little bottle whenever I offered it; and in this way it lived with me a constant companion for several days, travelling in a little thin gauzy bag distended by a slender piece of whalebone, and suspended to a button of my coat. It was only necessary for me to take the little bottle from my pocket to induce it to thrust its spiny bill through the gauze, protrude its lengthened tongue down the neck of the bottle, and pump up the fluid until it was satiated; it would then retire to the bottom of its little home, preen its wing and tail-feathers, and seem quite content. The specimens I brought alive to this country were as docile and fearless as a great moth or any other insect would be under similar treatment. The little cage in which they lived was twelve inches long, by seven inches wide, and eight inches high. In this was placed a diminutive branch of a tree, and suspended to the side a glass phial which I daily supplied with saccharine matter in the form of sugar or honey and water, with the addition of the yolk of an unboiled egg. Upon this food they appeared to thrive and be happy during the voyage along the seaboard of America and across the Atlantic, until they arrived within the influence of the climate of Europe. Off the western part of Ireland symptoms of drooping unmistakably exhibited themselves; but although they never fully rallied, I succeeded in bringing one of them alive to London, where it died on the second day after its arrival at my house."

That it lived for two days only, must be attributed to the want of proper food, or the change of climate.

The most interesting birds of this family, if not for their gorgeousness of plumage, yet certainly for their habits, are those before alluded to,—viz. the members of the genus which our ornithologist names *Oreotrochilus*, that is, Mountain Humming-Bird. They frequent the heights immediately below the snow-line round the cone of Chimborazo and other volcanic mountains. Mr. Frazer killed many examples at Panza at an altitude of 14,000 feet. A particular species of this genus is found at about the same height, not only on Pichincha, but also on Antisana and Cotopaxi. Another species inhabits the Chilian Andes. This is only found in the elevated valleys of the Andes, buffeting with its tiny wings, or cowering under the fierce storms of hail, rain and thunder which there disturb the long and lofty silence. It subsists more on small flies than on the nectar of flowers—the presumed ordinary food of humming-birds; and on examination the crops of some of these little creatures when captured were found to be filled with flies, which they had seized before sun-down along the margins of the mountain-rivulets, the last place where a humming-bird would, according to common opinion, be sought for, or the bird itself seek for food. Other specimens were taken at elevations of from 6,000 to 8,000 feet.

It is a notable circumstance that Mr. Gould has found the metropolis to be the best place for collecting humming-birds and publishing his monograph about them. "In no other place," says the author, "could such a publication be accomplished without a greatly increased expenditure both of time and money: it is only in capitals like London and Paris that undertakings of this nature can be carried out successfully; for nowhere else are the requisite talents and materials to be obtained." This is a curious contrast to the Greek comic poet, for Aristophanes placed his Cloud-cuckoo-town—his fabulous city of birds, which became the centre of attraction to all sorts of uninvited guests—in the air, while Mr. Gould has brought down the most beautiful birds of the air to that real centre of attraction the chief city of the world.

What is Contraband of War, and What is Not. By Joseph Moseley, B.C.L., Barrister-at-Law. (Butterworths.)

Contraband of War is a subject on which, a few years ago, the ideas of most of our English lawyers were not a little hazy and confused. They had read much about it in Grotius and Vattel, and in the writings of Kent, Story and other modern jurists. The long peace, however, rendered the subject rather one of curious inquiry than of practical importance, and it was neglected, or studied in a languid manner. The war with Russia did not produce any great change in this respect. It was not fruitful in cases involving this branch of law. It caused some little awakening of the legal mind to the importance of the subject, but before we were well aroused the peace came, and we again slumbered. Now, unhappily, a war has arisen which must, if it continue, produce cases in abundance in which every question of contraband of war will arise. Every lawyer must polish up the information now lying, old and rusty, in the corners of his mind, and every gentleman who is not satisfied to remain mute during the discussion of some of the most interesting events of the day, must acquire a general knowledge of this subject.

The task thus imposed upon the gentleman is neither difficult nor irksome. In its general scope and outline the law of Contraband of War is simple and easy to be remembered. Bearing in mind the origin of the law on this point, that it has its rise in the claim of belligerents on one side to intercept all supplies which increase the powers of offence or defence of their enemy, and the claim of neutrals, on the other hand, that their trade should not be damaged further than the necessity of the case requires, the decisions on this subject appear eminently reasonable, and present none of those peculiarities—by the profane called *nonsense*—which are apt to repel the non-legal mind in the study of that perfection of reason, the law of England.

The division also of goods and merchandise into three classes, made by Grotius, and still generally adopted, is easily remembered:—1st, Things only used in war, as arms and ammunition; 2nd, Things incapable of use for warlike purposes, as ornaments, dress, &c.; and, 3rd, Things capable of use either in war or peace, as money, ships and provisions. Those that are contraband in the first degree bear in themselves the full evidence for their confiscation. Those in the second class contain in themselves the full proof of their innocence. The goods in the third class are contraband or not according to the evidence which may be produced as to their destination for the purposes of war or of peace.

Of course questions of much nicety often occur as to the class to which any given articles belong; but the principal points have arisen as to the evidence which shall decide whether goods of the third class are contraband or not, on which subject the place of production and the port of destination, whether it be a port of naval outfit or a general commercial port, are often held to offer conclusive evidence as to the object for which the goods are being conveyed. Thus, it has been held that Dutch cheeses or salted provisions, which if bound for Bordeaux would be free, are contraband if their destination be Brest.

The doctrine of pre-emption gives to the belligerent State the right of taking, on payment, all goods which may be used for warlike purposes, and which are on the road to the enemy; and is applicable to those goods comprised in the third class, as to which the

evidence of warlike destination is either doubtful or wanting.

The effect of the carriage of contraband goods on the vessel which carries them, and on other parts of the same cargo, is another important branch of this subject. The rigour of the old rule, which forfeited the vessel and the whole cargo if any part were contraband, is now so far relaxed, that if the ship belongs to a different owner, the contraband articles and other parts of the cargo which belong to the owner of the contraband only, are forfeited, and the ship itself is not forfeited at all. To take advantage of this relaxation of the old rule, however, it is necessary that the vessel should have regular papers, that she should be in her proper course, and that her proceedings should be regulated by good faith.

We have now touched on such principal points in the Law of Contraband as may at this time, we think, be generally interesting. The law on the subject will be found very ably, succinctly and readably set forth in the little book before us. The author adopts a new, or rather revives an old method, of impressing the law on the mind of the reader by condensing it into a short, pithy sentence. Thus, the rule of forfeiture to which we last alluded is embodied in this *Rule: Contraband confiscates all of the same bulk and of the same owner.* This idea is one which may be usefully applied; but in the present instance, we think the author has not in general been successful in imparting that proverbial ring to his rules which is necessary to impress them upon the mind. We have not dwelt upon the importance of this subject to the commercial world. The appeal to pocket is too powerful to admit the possibility of its weight being overlooked in that quarter.

The Belgian Almanac—[*Calendrier Belge: Fêtes Religieuses et Civiles*]. (Bruxelles, Classen.)

By the publication of his serial work, the 'Festil Almanac of Belgium,' Baron von Reinsberg Düringsfeld is doing good service to antiquaries, as he preserves the memory of many customs, historically and ethnographically interesting, which are rapidly dying out. One of the last numbers contains so curious an account of "Stilt-fights at Namur," that we feel no hesitation in giving a condensed idea of the sport in our columns.

In Namur the Carnival was, once on a time, specially remarkable for the battle of the walkers on stilts, a thorough People's Festival, which formed the delight and pride of the youth of the town. The first mention of it is found in the chronicles of the early part of the fifteenth century. The numerous combatants were divided into two parties, the "Melans" and the "Avresses": the former, who represented the old town, wore gold and sand-yellow as their colours; while the others, who belonged to the suburbs and that portion of the town situate between the third and fourth walls, wore red-and-white cockades. Each party had its captain and "Alfer" or ensign, and consisted of a certain number of brigades; each of these, again, commanded by a brigadier and under-brigadier, was composed of fifty to one hundred fighting-men, as well as a number of supporters (*souteneurs*), that is to say, comrades whose duty it was to support the combatants when their stilts broke, or to take their place, should any accident render them incapable of continuing the engagement.

Several guilds had brigades bearing their names: in other cases, the quarter of the town decided the sign of the bands. On the side of the Melans were the brigades of the Porters

and of the Butchers, who wore fur caps; the "Soubises," recruited in the Rue de la Croix, and who wore an iron helmet adorned with a grenade—red for the privates and silver for the leader; the "Black Grenades," from the Pied du Château Square and the adjoining district; the Boatmen, and the brigade of "Penmen," composed of lawyers, notaries and clerks. The latter combatants wore a black coat, white knee-breeches, and a turned-up hat, with a gilt feather or pompon. The Brewers, generally called "the King's-house," because they occupied the post of honour, wore knee-breeches of red satin, and a round hat with a plume. Their leaders wore, according to their rank, a gold or silver embroidered scarf. They were also generally accused of being parade troops, rather than real combatants. Lastly came the brigade of the "Raccasseux," or veterans, reserved for decisive moments. Only one of the *faubourgs*, Val St.-Georges, now called Les Trioux des Salzinnes, was on the side of the Melans, and supplied the brigade of Briqueteurs or brickmakers.

On the side of the Avresses stood the remaining *faubourgs*, among them being the brigade of the "Jambes" (*quare* legs), and that of the Tanners, the strongest on that side. The latter wore white knee-breeches, a red coat, and ditto stockings, coming above the knee. Next came the brigade of the Prince de Ligne, the Stonecutters; the Scotch, also called "Les Montagnards"; the brigade of Vedrin, which carried a cow on its banner; and, lastly, the "Astalle" brigade, composed of woodcutters and other workers in timber. This brigade was raised in St. Nicholas Street, and derived its name from the fact that the fighting-men, through the want of handsomer plumes, wore a splint of wood in their hats, called in the *patois* "astalle."

Both parties had also a brigade of Cuirassiers and another of Hussars or Red Grenadiers, so called from the colour of their uniforms. The Namur stilts were eight to nine feet high, and a foot-board was fastened on them about three feet from the ground, so that the upper extremity of the stilt rose as high as the shoulder. When the feet were on the board, the stilter held on by placing his hands in a species of handle, like the basket of a sword. The stilt-fights had their rules, like the mediæval tournaments, and it was considered dishonest to depart from them. The only way in which an opponent could be rendered *hors de combat* was to push him with the elbow, and "*pitter*," that is to say, cross stilts with him. When excited by the combat, the fighters sometimes demanded the "*boute à toi*": this was a duel to the death, in which it was permissible to employ any mode of fighting, butting with the head, kicking and cuffing. Under such circumstances an entire brigade might be overthrown "*en donnant l'avion*," that is to say, by thrusting the stilt forward almost horizontally, and upsetting everybody that advanced in this direction.

The place where these fights usually came off was the Square of St. Remigius. The brigades of the Melans marched down to it, the Avresses up, and each party was headed by the Body Guard of the Commander-in-Chief. The fight began, and the combatants went at it with such fury that the Maréchal de Saxe, who witnessed one of these stilt-fights in 1748, exclaimed: "If two armies were as brave at the moment of coming into collision as these young men were, it would no longer be a battle, but a frightful butchery." So long as the fight lasted, the two ensigns stood on the balcony of the City Hall, and waved their standards in turn, as the victory seemed to incline to their party. When the fight had gone on for several hours, one side would surrender. In order to

celebrate their triumph, the victors "raised a stilt," that is, they hopped round on one stilt while lifting the other in the air. Finally, the drums and fifes played a triumphal march, and the entire band "*reppait*," or danced, striking the end of the stilt sharply against the ground.

One of the most celebrated stilt-fights took place on the last day of the Carnival of 1669; it induced Baron de Walef to write a poem about it, in four cantos, which has been frequently reprinted.

In the second half of the eighteenth century, the magistrates, who saw in this sport merely an excuse for fighting and personal ill-treatment, only allowed it at lengthened intervals, and it was finally prohibited. When the revolution of Brabant broke out, and the French broke in, the stilt-fights entirely ceased, as did many other old customs. Nevertheless, the good people of Namur did not utterly forget their favourite sport; and during the Empire the Brigades were formed anew. The Porters, who were the last representatives of the "Melans," assumed the name of the "Blues," owing to that colour prevailing in their dress. The Tanners, who represented the Avresses, called themselves "Nankiners," from the nankeen of which their clothes were made. These two brigades formed a body of about 150 men, dressed in a turban, tight coats, and wide trousers. A third division, of about the same strength, took the name of the Hussars. When Napoleon entered Namur, in 1803, these brigades had a stilt-fight, but the First Consul appeared to take but slight interest in it. Another fight, in which the number of combatants was smaller, and which was the last, came off on the 26th of September, 1814, to celebrate the entry of William of Orange into Namur. Since that period, a small body of men mounted on stilts take part in solemn processions, and within the next half-century the very name of this once popular festival will, perhaps, be forgotten.

At Ypres it was formerly the custom to lead about the family of giants, in order to heighten the popular merriment. These giants, who play so prominent a part in the amusements of Belgian towns, belong to very ancient times. They are found in nearly all the towns, and in some of the villages of Brabant and Flanders; and everywhere a song, that varies but slightly in the different parts of the country, is sung during the procession. Thus, for instance, in Ypres:

Als de groote klokke luidt
De klokke luidt
De reuze komt uit,
Keer u eens om, reusjen, reusjen.
Keer u eens om
Gy schoone blom.

And so on, through a yard or two of stanzas, unnecessary to inflict on our readers.

Some authors assert that this song and the ceremony are connected with Scandinavian recollections, and refer to various passages in the Eddas, which describe the contests between the giants and the divinities. After a lengthened combat, the latter drove their enemies into the desert; and hence arose the traditional hatred, an echo of which may be found among the Saxons and Flemings, who are the descendants of those deities. This hatred is exemplified in an old giant-song quoted by Willems:—

Die zeit: wy zin van reuzen gekomen
Zy liegen darom.

Strong but not complimentary language assuredly; still, it is curious to find people denying their descent from giants—a fact of which they might fairly be supposed to be proud.

The course of centuries has obliterated this traditional hatred, if it ever existed, and the old foes have become the favourites of the nation. These grotesque images are beloved;

they are spoken of with a truly patriotic enthusiasm, and regarded with no end of delight. Several cities have kept up the fashion of parading, under different names, shapes and clothing, their monstrous wicker-work dolls. The most celebrated giants are those of Antwerp and Wetteren. Out of regard for our readers, we refrain from quoting another giant-song. We will merely state its motive. The giant is hungry and thirsty; and the mother is requested to give him coffee, bread-and-butter, and the best beer. Whereupon he declares himself satisfied. Hunger and thirst have been the attributes of gods from the earliest times, probably to the advantage of the priests; and we consider this a more probable solution of the origin of the giants than a mythical reference to the Scandinavians.

In Courtrai, a giantess is carried about, called "Mevrouw van Amazonie"; in Ath, "Madame and Mosjeu Goujas," or Goliath, are to be found; and, in Brussels, Ommegan and his family. At Hasselt, the old giant "Lange Man" re-appeared in 1835, on the occasion of the Jubilee; he was seated in a four-wheeled cart, and presided over the distribution of soup, which was made in memory of a famine that occurred in 1638. At Rupelmonde there was formerly a building known as the "Reuzenhuis," or "Pronkhuis," in which the giants, camels and dragons that figured in the great processions were kept.

The cities of Lille, Douai, Cassel, Hazebrouck, and Dunkirk, in Northern France, also possess their giants, and those of Cassel and Hazebrouck still make their appearance on "fat" Tuesday. With these exceptions, the Belgian Carnival at the present day offers few peculiar features.

Lectures on the Manuscript Materials of Ancient Irish History. By Eugene O'Curry. (Dublin, Duffy.)

Historical Memoir of the O'Briens, with Notes, Appendix, and a Genealogical Table of their several Branches; compiled from the Irish Annals. By John O'Donoghue. (Dublin, Hodges, Smith & Co.)

It has been said of Mr. Lever's stories, that a man rises from them with a sensation of having been in very rollicking and rather dissipated company; and that the feeling, on closing some of his volumes, is one of too much claret, and a "next-morning" retribution. So is every reader of early Irish annals conscious of an uneasy impression. These annals go back to a remoter period than any to which the historians of other European nations can carry an authentic narration. Unfortunately, however, they do not introduce us to the acquaintance of an agreeable or respectable people. For a thousand years we only meet with so-called "Kings," whose sole occupation seems to have been to shed the blood of their enemies, and to recognize an enemy in every man who had a will of his own and some property to lose. The record of nearly every kinglet is "slain by his successor." Occasionally, there appears a name upon the roll, like that of Odlamh Fodhla, which belongs to a wise and virtuous ruler; but his influence is not enduring, and murder is renewed as soon as he vanishes from the scene. The story would be monotonous but for a certain variety of the horror. Thus Seadnha, who invented banners to distinguish his troops, was cut into quarters by his successor. Siorlamh, who had such long hands and arms that when he stood upright his fingers touched the ground, was cruelly done to death. Even the ladies were not spared; and among these the famous red-haired queen, Machadh Mongruadh, who is

said to have "reigned magnificently," was most ungallantly murdered by that disgrace to Irish kings and gentlemen, Reachta Righdhearg.

The materials for further comprehending the early history of Ireland have been now rendered accessible by Mr. O'Curry, who exercises the office of Professor of Irish History and Archæology in the "Catholic University" of Ireland. His appointment to that honourable post surprised nobody but himself; and this may be easily accounted for. His qualifications were well known to scholars, his own disqualifying weakness was the secret of his own breast. The volume named first at the head of this article is a most praiseworthy monument of his learning, his industry, his patience, his zeal, and not of his discretion. How fit he is to treat of ancient Irish history every page of the book before us testifies most satisfactorily; but how unfit he is to address young men upon this subject, how he forgets the scholar in the politician, and the philosopher in the bigot, let the following paragraph in his twentieth Lecture show. It is a singular and painful evidence how even a wise man may be blinded to the truth. He has been speaking of old Irish prophecies circulated, and, according to the Professor, invented by the English; and he then adds:—

"Nor can I help remarking how it is that this same spirit of false prophecy, far from ending with Carew and the last ray of the real independence of Erin in the year 1602, has continued even to this day: for even in our own times the same unscrupulous enemy of our race and creed continues to pour forth, with an exultation almost fiendish, predictions of the same character—providentially falsified so far,—of the total annihilation or extirpation of the Gaedhel from the land which he inherits from an ancestry of three thousand years."

Turning from this angry gentleman, whose rude ill-temper cannot altogether deprive him of our respect, we find in Mr. O'Donoghue an historian who is not the less Irish for being more impartial in his observations. The 'Historical Memoir of the O'Briens' is a most valuable addition to the history of Ireland. It is not, however, a record of which the sons of the old kings of Thomond have any reason to be particularly proud. If antiquity of race be, as it is said to be, a very fine thing, the O'Briens have sufficient grounds for indulging in the vanity which attaches to that matter. But, after perusing this modestly-called 'Memoir,' so creditable to the varied powers of the accomplished author, the O'Briens ought to manifest some meekness and humility, for, taking the testimony afforded by Mr. O'Donoghue, and confirmed, as we find it, by Prof. O'Curry, the O'Briens, with all their ancientness of blood and bravery of soul, were the most disagreeable, hard-to-please, ruthless and treacherous race of which we ever read, even in Martin Haverty's 'History of Ireland,' where all our idolized Irish heroes are converted into such unmitigated rascals.

From the earliest times, when the O'Briens swayed the sceptre and occupied the Munster throne, which afforded them so uneasy a seat, down to the reign of Henry the Eighth, when the last of the Kings—very much to the disgust of Mr. O'Curry—exchanged the title and realm he was unable to retain, for the rank of Earl and the well-secured estates of a nobleman,—during all this period, this remarkable family seem to have been possessed by one ruling idea made up of various parts—never to obey the existing laws, never to acquiesce in settled arrangements, and never to have a chief or king at their head without endeavouring to tumble him from his seat and strip him of his greatness. They were as crafty as foxes, and were for ever fighting like wild cats.

The peace established by Brian Boromh ceased at his death. "The dissensions between the sons of Brian" let anarchy loose upon the land. In 1115, the forces of Murtoth O'Brien "burned the great church of Ardbraccan, with 'its full of people,' and many similar edifices throughout Bregia." On the arrival of the English in Ireland, "the part acted by Donald O'Brien, King of Thomond, did not reflect credit on the O'Briens and their followers." That is to say, the O'Brien helped the invader, for his own personal advantage, with a treacherous reserve. Mr. O'Donoghue says of his submission and engaging to pay tribute to Henry, "that in so doing he was only going with the tide, and awaiting a favourable opportunity of resuming his independence, is clear enough, from his subsequent history." Clear enough, certainly, by his defeat of the Anglo-Normans at Thurles, after which Donald returned homeward and put out the eyes of a couple of his kinsmen by the way. Unable to maintain his independence, Donald O'Brien again made submission, and the good-natured Norman conferred upon this vacillating chief the dignity of King's Baron. "The descendant of the conqueror of Clontarf," says Mr. O'Donoghue, who was in the secret, "removed from that illustrious hero by only six degrees, in the line of descent, concealed his contempt for the alleged dignity of an English Baron by an affected humility, and bowed his assent." Mr. O'Donoghue states that, "the policy so uniformly and successfully practised of setting the natives by the ears" was a Norman policy, and of course he reproves it. The truth, however, is that it was the chronic disease of the natives themselves; for, as the author soon after remarks, "The princes of the House of O'Brien, having no occupation among their neighbours, were at liberty to prosecute their own quarrels"; whereupon brother killed brother, uncle slew nephew, cousin put out the eyes of cousin, and the people must have showered anything but benisons on the whole family of contending rivals. We find relationships set down as the causes of repeated conflicts, and occasionally we witness the spectacle of a chief and his wife burnt to death in their own house. As the O'Briens were among the first to submit to, and then betray, the invaders, so were their after-dissensions "the occasion of giving the English the first solid footing they acquired in Thomond." The O'Briens very astutely used and abused the Normans, of whom they were the allies one day, and the foes the next; and when the Normans happened to be vanquished in fight, and so quieted for a season, we hear of the ever-uneasy O'Briens profiting by the dull time "to turn their arms against their cousins," and turning them out of possessions or being turned out of their own. When there was not fighting there was drinking; and we are told of a conference at which a certain "Donogh O'Brien made his appearance intoxicated from mead," and where he "indulged in invectives against Turlough," his kinsman. As subordinate commanders, Mr. O'Donoghue describes them as faithless to their chief, and he proves how impossible it was for the land where they had influence to enjoy peace or prosperity, so intense was "the jealousy which had never ceased to inflame the rival branches of the O'Briens." They were not chivalrous; they were savage. The body of a worthy enemy they had not refinement enough to respect, and as for friends, we are told of Brian Bane and Mahon O'Brien, who, for want of better occupation, "passed into that part of Thomond which was situated eastward of the Shannon, and expelled the Fion Blodrig, who had always been their allies."

Brian Bane, says Mr. O'Donoghue, "was constantly engaged in military operations. Among some of these may be mentioned the burning of the town and church of Tipperary, the sacred edifice being at the time full of men and women." It is the first time we ever heard of such an atrocity being designated as a "military operation."

In this strain Mr. O'Donoghue is compelled, no doubt reluctantly enough, to tell the tale of the O'Briens. Perhaps he is unconscious how very black they come out from beneath his able and impartial hand. They were dreaming unceasingly not to work good for their country, but to secure sovereignty over it for themselves. To accomplish this, all means were good for the end in view,—agreeing to illusive treaties, and making oaths and signing deeds, which the King of England, we are told, familiarly described as "not worth a farthing." Such were the men who for centuries gave "monarchs to Ireland, with more or less acquiescence"—a fine touch of satire!

"With more or less acquiescence," then, the O'Briens continued to take what they might, and keep what they could; but the poor relations of the race invariably turned against the men at the head of it. It is plain, from Mr. O'Donoghue's narrative, that chieftains of this quality, of whatever race, were the scourges of the land, and that Ireland was subjugated to its profit, when Henry the Eighth assumed the sovereignty of that kingdom and suppressed the "kinglets." Prof. O'Curry, on the other hand, intimates that those old days were halcyon days, and that Murroch O'Brien was a traitor for taking a course which, in effect, was beneficial to the kingdom:—

"The brave Dalcassians having thus rid themselves both of domestic and foreign usurpation, preserved their country, their independence and their native laws, and institutions, down to the year 1542, when Murroch, the son of Turloch, made submission to Henry the Eighth, abandoned the ancient and glorious title of the O'Brien, and disgraced his lineage by accepting a patent of his territory from an English king, with the English title of Earl of Thomond."

It was the wisest course the O'Brien could follow; but mark what came of it! The O'Briens who were unable to obtain the same rank treated Murroch as a traitor and usurper; and he himself, if we remember rightly, was so little aware of his new and responsible position that he claimed to be above all law, and refused to be bound by any. So things fell from bad to worse, till the great rebellion in Elizabeth's time was projected and failed; its failure lending strength to the English government of the period,—a government of which Mr. O'Donoghue speaks with creditable candour. Here is the Professor's view of the case:—

"The Anglo-Norman power which came into the country in the year 1172, had constantly gained ground, generation after generation, as you are of course aware, in consequence chiefly of the mutual jealousies and isolated opposition of the individual chiefs and clans among the Gaedhels. At last the two great sections of the country, the races of the north and the south, resolved to take counsel, and select some brave man of either of the ancient royal houses to be elevated to the chief command of the whole nation, in order that its power and efficiency might be the more effectually concentrated and brought into action against the common enemy. To this end, then, a convention was arranged to take place between Brian O'Neill, the greatest leader of the north at this time, and *Tadhg*, the son of Conor O'Brien,—at *Caeluige* [Narrow Water], on Loch Erne (near the present Castle Calwell). O'Neill came attended by all the chiefs of the north and a numerous force of armed men. O'Brien, though in his father's lifetime, went thither, at the head of the Munster and

Connacht chiefs, and a large body of men in arms. The great chiefs came face to face at either Bank of the Narrow Water, but their old destiny accompanied them, and each came to the convention fully determined that himself alone should be the chosen leader and king of Erin. The convention was, as might be expected, a failure; and the respective parties returned home more divided, more jealous and less powerful than ever to advance the general interests of their country, and to crush, as united they might easily have done, that crafty, unscrupulous, and treacherous foe, which contrived then and for centuries after to rule over the clans of Erin, by taking advantage of those dissensions among them which the stranger always found means but too readily to foment and to perpetuate."

In later days, the O'Briens maintained the reputation of their house, one of them, the famous Lord Inchiquin, taking both sides of a political quarrel, serving Stuart and Cromwell by turns, and contriving to obtain no small advantages by his tergiversation. As Mr. O'Donoghue approaches still more recent times, the O'Briens appear before us as patriots and gentlemen, and are infinitely superior in our eyes to the mendacious, slaughtering, unscrupulous barbarians who called themselves Kings of Thomond—with their one virtue of bravery. The instincts of the race have not, however, entirely died out. Mr. Smith O'Brien has added to literature a characteristic letter, in which, by taking such an audacious flight as declaring that Ireland is as oppressed as Hungary, he suggests courses which, if adopted, would throw Ireland back into the ruin amid which this old race would seem to have loved to dwell. They were like the old Scottish chieftain who prayed—"Oh, Lord! turn the world upside down, that fighting-men may make bread of it!" It was a relative of the late Daniel O'Connell who used to assert, that an Irish patriot's view of the fitness of things amounted to this,—that if you had five shillings, the patriot ought to have four and eleven pence of it; and the truth of the sarcasm is not ill illustrated in the 'Mémorial' which makes heroes of men who had no shadow of mercy for their fellows.

In conclusion, and not foreign to the characteristics of the O'Briens, we will ask—who is the Lord Inchiquin to whom Mr. O'Donoghue dedicates his able work? Is there a Lord Inchiquin at all? and is not the employment of the title premature? Is not the highly-respected gentleman whom Mr. O'Donoghue so designates merely a claimant as yet to vote in the elections of representative peers for Ireland? and till the claim is established, is he not addressed in all official documents by his well-known and sufficiently-honoured designation of Sir Lucius O'Brien? Be this as it may, to the latter gentleman is dedicated a very excellent book; one creditable to Irish literature, and worthy of being studied by all interested in the history of our common country. If the O'Briens do not altogether make a creditable appearance in the early history, the more praise is due to Mr. O'Donoghue's honesty, who evidently loves his subject. We recommend his book most cordially; and, on other grounds, we do the same with respect to Prof. O'Curry's work, which, despite the drawbacks to which we have alluded, should be perused by historical students. The greatest stumbling-block to uninitiated readers will be found in the Irish proper names. There was a sacred name for Rome, which pious Romans might easily but were taught never to pronounce in conversation. Irish names and words generally seem to have had superfluous consonants thrown in, in order to render their pronunciation altogether impossible.

The Restoration of the Jews: the History, Principles and Bearings of the Question. By David Brown, D.D. (Edinburgh, Strahan & Co.; London, Hamilton, Adams & Co.)

PEOPLE interested in speculations as to the probable future of Israel, and, at the same time, determined to take none but the ordinary Evangelical views of the subject, will find this learned and well-written essay deserving perusal. Of course, it makes much of the isolation of the Jewish race, and their supposed inability to amalgamate with other peoples. The exclamation of Balaam, "Lo, the people shall dwell alone, and shall not be reckoned among the nations!" is, of course, regarded as a prophecy pointing to the segregation of the Israelites in the parish of St. Mary Axe, and other quarters, both of London and all the principal cities of the world. The great first cause of the Jewish dispersion, and subsequent isolation, amongst the nations of the earth is indicated with much precision and careful repetition; but the secondary causes that contributed to those remarkable phenomena are passed over without notice. The fact is, the same universal hatred of the Jewish people which first reduced them to the condition of despised aliens, in every land of Christendom, afterwards retained them in that forlorn state. They were not absorbed by their haughty superiors, because, from the monarch to the serf, Christians despised them and loathed them too genuinely to think of intermarrying with them. Far from being ambitious of maintaining their national isolation, the Jews have never been slow to avail themselves of the means sparingly offered them of merging their identity in that of the dominant Christian races. Of course, they have always had amongst their rabbis and elders proud of their historic traditions, who would have disdained intermixture with the foremost of "the flat-nosed Franks"; but there can be no question that the separation between Jews and Christians has been preserved by the prejudices of the latter, and not by those of the former; and yet it is common to hear Biblical enthusiasts speak of the position of the Israelites as an affair that does not admit of a reference to secondary causes. "How comes it," they ask, "that this despised and desolate race, oppressed by iniquitous laws, spat upon by beggars in the streets, unable to acquire land, only occasionally permitted to retain possession of the money acquired by their industry,—how comes it that they still exist as a distinct people? that they have not been absorbed by their conquerors? that they have not amalgamated with the other nations?" In fact, the very causes of their isolation are brought forward as proofs of the impossibility of accounting for it save by the direct intervention of the Divine will. What element was there in the Middle Ages to absorb the despised race, when "Jew" was a by-word for everything loathsome and hateful? What decent family would marry the Jew, who could neither inherit nor hold land, and whose name in the family roll would make them infamous throughout their country? The abhorrence of the Jew was found in the lowest as strong as in the highest grades of society. The mere slave of the soil kicked him out of his mud hovel, when he entered it, craving for a drink of water. The common thief of the London streets spat in his face, and called him "dog." And yet simple people marvel how it was the Jew did not join hands, and dwell on friendly terms, with the Gentile, making one blood of two bloods!

The rapid amelioration of the condition of

the Jewish race in this country is producing on all sides of us phenomena which display more forcibly than ever the nature of that isolation, of which the chosen people of God sometimes affect to be proud. They are permitted to hold and inherit land:—as a consequence, county families are marrying with them. They are permitted to enjoy undisturbed the fruits of their own industry, and are no longer popularly believed to “stink” with a savour different from that of other people:—the consequence is, that they are found dancing in the most fashionable ball-rooms of May Fair during the London season. Indeed, the process of amalgamation is proceeding with astounding rapidity, when it is remembered that it was only the other day that Baron Rothschild was allowed to take his seat in the House of Commons. Everywhere,—in every street and club, in every profession and pursuit,—the Jew meets us, affecting the style and tone of the Christian, altering the letters of his name, from Levi to Lewis, from Mathew to Mayhew, from Bernalez to Bernal, so as to obliterate the evidence afforded by his patronymic of his connexion with the peculiar people. We are inclined to think that, in the course of five or six more generations, the historical student will have occasion to say of British Israel, that he is “not to be reckoned amongst nations.”

OUR LIBRARY TABLE.

Life amongst the Indians: a Book for Youth. By George Catlin. (Low & Co.)—Mr. Catlin, the intrepid traveller and pictorial illustrator of the American wildernesses, endeavours in the present work to entertain young people with narratives of personal adventure in the prairies, and descriptions of the customs, pursuits and characters of the Indian tribes. The work is indebted for many of its attractions to the artist and the engraver, being, both in respect of its interior and its exterior, prepared in the showy and ornate style usual in the juvenile literature annually offered to the purchasers of Christmas presents. Indeed, it may be presumed that the publishers of this ‘Life amongst the Indians’ are looking forward to the “Christmas holidays” sale, and in submitting it thus early to criticism, hope only to secure for it a better introduction to public notice. From the tone of the Preface, and the advice of the first chapter, urging children to peruse such works as Stephens and Catherwood’s ‘Histories of Mexico and Peru,’ and Prescott’s ‘Ruins of Palenque and Uxmal,’ we feared the work would be found written in a style above the average intelligence of those to whom it is addressed. This anticipation was, however, agreeably disappointed. ‘Life amongst the Indians’ is an admirable child’s book, full of useful information, wrapt up in stories peculiarly adapted to rouse the imagination and stimulate the curiosity of boys and girls. To compare a child’s book with ‘Robinson Crusoe,’ and to say, that it sustains such comparison is to give it high praise indeed. This commendation, however, we bestow on Mr. Catlin’s work, which is one of the best volumes for the nursery, or the school-room, that we have ever read. Here and there the reader, indeed, finds passages which would have been better omitted. For instance, when Mr. Catlin says, “cruelty is a necessity in savage life: and who else has so good an excuse for it?” he states that which will meet with no dissentients amongst those who see in savage life a need for private vengeance to accomplish that which in civilized societies is better effected by the strong hand of the law. But still such a doctrine is beyond the comprehension of children, who must first be taught to abhor cruelty, and may be left to discover on reaching more mature years, the occasions when acts in themselves cruel are justified by social exigencies. Mr. Catlin does better service when he defends his beloved savages from the misrepresentations of ignorance, and shows his youth-

ful readers that the repulsive usage of scalping fallen enemies is usually unaccompanied by the atrocities with which the popular imagination surrounds it. The rule of the Indian warrior is to scalp the dead. If he takes the scalp of a live man, it is under the misapprehension that the fallen foe so operated upon is no more. And if, after taking through mistake the scalp of his living enemy, a warrior should discover his error, he would not wear the scalp as a badge of honour, but would bury it as evidence of a deed fit only for repentance and shame. “But then the ‘savage cruelty of scalping!’—savage of course, because savages do it,” says Mr. Catlin. “But where is the cruelty of scalping? A piece of the skin of a man’s head is cut off after he is dead; it doesn’t hurt him; the cruelty would be in killing, and in the Christian world we kill hundreds of our fellow-beings in a battle, where the poor Indians kill only one! Cutting off a small piece of the skin of a dead man’s head is rather a disgusting thing; but let us look. What better can the Indian take? He must keep some record. These people have no reporters to follow them into battles, and chronicle their victories to the world; their customs sanction the mode, and the chiefs demand it. If civilized warriors should treat their fallen victims thus, it would be far worse. There would be no motive or apology for it. It would be almost as bad as taking their watch, or the gold from their pockets!—But the Indians scalp the living! Yes, that sometimes happens, but very rarely. The scalp being only the skin with the hair, without injuring the bone, of course, would not destroy life, therefore a man might be scalped alive; and in the hurry and confusion of the battle, the wounded and fallen, and supposed to be dead, have sometimes been scalped, as the Indians were rushing over them, and afterwards have risen from the field of battle and recovered. I have seen several such. These scalps, if the Indian should ever be made aware of the facts, would not be carried; but would be buried, as things which warriors would not have a right to claim, and which their superstitious fears would induce them to get rid of. The scalp, to be a genuine one, must be from an enemy’s head; and that enemy dead, and killed by the hand of him who carries and counts the scalp.” In like manner Mr. Catlin teaches his young readers, that to torture prisoners is by no means either general or frequent amongst the savage tribes of America.

A Handy-Book of the Game and Fishery Laws. By George C. Oke. (Butterworths.)—*The Game Laws of the United Kingdom.* By James Paterson, Esq., Barrister-at-Law. (Shaw & Sons.)—There is no branch of our law which has been more entirely reconstructed during the last thirty years than that which relates to the killing of game. It is not easy to realize the fact, that a few years ago no man who had not a hundred a year in land could lawfully kill game in England, however richly endowed with other kinds of property he might be; and that the country gentlemen imagined (as Sydney Smith expressed it) that it was in the power of human laws to deprive the Three per Cents. of pheasants, and (by the prohibition of the sale of game) to arrest its inevitable progress from the wood of the esquire to the spit of the citizen. The law on this subject is now, in the main, reasonable enough. We only wish the same could be said of those to whose hands the administration of the law is entrusted. While the judges in these matters are generally the great game preservers or their obsequious neighbours—the clerical sons of the attorney or agent of the game preservers, and such like—the curious instances of magisterial wisdom which enliven the daily papers at this dull time of the year must occur. Each of the little books now before us is a favourable specimen of that sort of popular law-book which, since the appearance of Lord St. Leonards’ Handy-Book, has become common. Care and industry are all that can be shown in such productions, and these qualities are generally shown in the present books. Mr. Oke’s book takes a somewhat larger range than that of Mr. Paterson, as it embraces the Law of Fisheries, with the provisions of the late statute relating to the Salmon fisheries. A short Preface to Mr. Paterson’s book makes us suppose that the

author was born out of due season. He evidently sighs for the good old days, when the squire could place spring-guns in the path of the poacher, and what was called the “more humane and mitigated squire” mangled him with traps. He would have been a brave champion of the laws as they were had he been ante-born by thirty years. As it is, he is a careful and satisfactory exponent of the law as it is in these degenerate days.

A Handy-Book on the Law of Bankruptcy, including the Practice under 7 & 8 Vict. c. 70. (The Gentleman’s Act). By Walter James Smith, Esq., Barrister-at-Law. (Effingham Wilson.)—*The Act to amend the Law relating to Bankruptcy and Insolvency.* Arranged and Simplified by B. Peverley, Attorney, and C. Hatt, Reporter Insolvent Debtors’ Court. (Houlston & Wright.)—The late Bankruptcy Act promises to have a great success in a professional point of view. If matters go on as they have commenced, we may expect to see the door in Basinghall Street as crowded as that of the Adelphi with ‘The Colleen Bawn,’ or Exeter Hall with Jenny Lind or Mr. Spurgeon. The trading public, as well as the non-traders who are now for the first time made eligible for bankruptcy, must be desirous of acquiring a knowledge of the provisions of the new Act by any means less alarming than the perusal of the 232 sections of the statute. The information is here afforded in each case for the small sum of one shilling. Mr. Smith is an experienced Handy-book manufacturer, and this, as well as previous works of the same nature by him, is prepared with care and intelligence. The Index, however, should have been more full. The work of Messrs. Peverley and Hatt is little more than short notes of the effect of the different sections in the same order as they occur in the Act, with a Table of Contents. These notes might, we think, in many cases, have been more clearly worded, and have contained fuller information, without being increased in bulk. The sale has, we hear, shown that the work of Messrs. Peverley and Hatt is valued by the public.

Said and Done! (Smith, Elder & Co.)—Why the title of ‘Said and Done’ was given to this book we cannot understand. So far from saying a thing and then doing it, the characters all say one thing and do just the contrary. It is well written, inasmuch as the language is well chosen, the conversations sharp and piquant, and the quotations apt; but the plot is foolish and confused. The two heroines, Aurelia and Cicelie Brackenbury are cousins, neighbours, and, to a certain degree, rivals, for the same young men propose alternately to each of them. Aura is, of course, proud and haughty, and an heiress; Cicelie, poor, gentle, loving and romantic; both beauties. Frank Brackenbury (another cousin) begins by proposing to Aura, and being accepted; but during the year of probation she finds she does not care much about him, and she falls in love with Cicelie’s half-brother, Ernest, a very good young clergyman,—much too good to dream of proposing to an heiress!—so he saves her life in a fire, and goes off to the other end of the world, to get out of reach of danger. Frank, meanwhile, turns his attentions to Cicelie, is refused, and then comes to town, and sees Aura, and receives a tolerably broad hint that he may return to his former allegiance whenever he likes, which he accordingly does, without loss of time; and they marry forthwith and find they are not quite so comfortable as they could wish. Cicelie begins by being very much charmed with a sentimental young gentleman, called Anthony Fane; and on finding that he makes decidedly equivocal speeches indiscriminately to herself, Aura, and to a little cousin of his own, she thinks better of it, and yields to the fascinations of a Major Amyott, who appears quite at the right moment and has not much connexion with the rest of the story. Poor Ernest is shipwrecked within sight of land, with a note of Aura’s in his pocket, which reveals his secret to the world, as it were, in a posthumous manner. Frank feels a little uncomfortable, very naturally, as it is evident his wife thinks very little about him or her child; but the baby dies, Aura repents, and Frank forgives, and we may suppose they “live very happily ever after.” There is much wanting to make ‘Said and Done’ a first-class book; but it is a

promising production, the style is good, and gives us hope for the future.

Rules, Formulæ and Tables for the Valuations of Estates, in Possession or in Reversion; with new Rules and Tables for ascertaining the Correct Market Value or Fair Price to be given for Annuities, Reversions, Advowsons and Next Presentations, in order to secure to the Purchaser a certain Rate of Interest Equitable Terms. By W. Downing Biden, Actuary. (Layton.)—The contents of this book are so fully stated in the title, which we have set out at length, that there is no need of further description. To examine carefully into the accuracy of the immense mass of figures contained in this work would require not only the patience of Job, but more spare time than is given to mortals in the nineteenth century. To express a favourable opinion on a cursory examination, might, perchance, mislead the reader. We can but call the attention of actuaries and speculators to the nature and object of these elaborate tables, and leave them to test their accuracy for themselves.

Of Lectures and Miscellaneous publications we have to mention the Rev. E. Kell on the *Life, Character, and Religious Opinions of the Rev. Dr. Watts* (Whitfield).—Mr. Theobald on *Laws of Health and Laws of Character* (Wilson).—Mr. Lambert on *Wit, Humour and Pathos* (Tresidder).—*The Two Napoleons*, by Iconoclast (Jeffs).—Mr. Locke on the *Remarkable Discoveries in Central Australia* (Gill).—Speech of the Right Hon. R. Lowe on moving *The Education Estimate* (Ridgway).—*Some Account of the Buildings designed by Capt. Fowke for the International Exhibition of 1862, and Future Decennial Exhibitions of the Works of Art and Industry* (Chapman & Hall).—*Lighthouses and Beacons of the Colonies, What is Required for them, and for their Administration*, by A. Gordon (Strangeways & Walden).—*The Cotton Crisis, and How to Meet It*, by J. Bourne (Longman).—*Fires and Conflagrations: Chemistry of Combustion; Causes of Failure of the Brigade System; with Advice How to Act in Case of Fire*, by W. H. Phillips (Wilson).—*Government Reform in England and America*, by A. Alison (Nichols).—*Essex Hall Drill and Speaking Lessons for Idiots, &c.*, by P. M. Duncan (Churchill).—*A Short Treatise on the Construction of Steam-Boilers*, by S. R. Smyth (Hare).—*On the Flint Implements in the Drift discovered near Bedford*, by J. Wyatt (Thompson).—and Mr. Slaney's *Short Journal of a Visit to Canada and the States of America* (Hatchard).

LIST OF NEW BOOKS.

Aveline's Mother's Fables in Verse, new edit. 8vo. 2s. cl.
Balfour's Confessions of a Deceit, 8vo. 1s. cl.
Beaumont's Cairo to Sinai and Sinai to Cairo, 8vo. 5s. cl.

INTERNATIONAL EXHIBITION BUILDING.

SOME months since we gave a general description of the architecture and the disposition of various sections of this enormous building, as they are intended to be appropriated to its many requirements. To a certain extent we explained its structure and peculiarities, and dwelt with considerable satisfaction upon the highly ingenious manner in which the architect-engineer had overcome certain difficulties incidental to the site itself. Amongst these it would be unpardonable not to give him great credit for the effectual manner in which he has turned what would really be, in ordinary hands, a serious obstacle into a positive advantage. It may not be generally known that the roads surrounding the site are about 5 feet above the common level of the ground on which the building stands, consequently the view obtained by a visitor who would have to descend this 5 feet would be one singularly disadvantageous to the whole aspect of the interior. An entry down a step, as every builder knows, would be inconvenient, and anything but imposing; to obviate this by raising the whole floor, which is sixteen and a half acres in extent, with made earth, would have seriously enhanced the cost of the building, and, from the inconvenience to which the workmen would have been put of working upon newly-made ground 5 feet in depth, might have delayed the completion of the whole, or, at least, imperilled that result. Let the reader consider what would have been the condition of such an artificial floor during the progress of the works after a day or two of rain, or a few weeks of dry weather even, traversed as it is by hundreds of heavily-laden carts and waggons, and by thousands of workmen, from day-dawn till night. Considering this, the reader will give Capt. Fowke due credit for the ingenuity he has displayed in causing the entrance to be by means of ascending two steps to a raised dais under each dome, from which grand views of the whole interior may be obtained, commanding by their very positions the best spots for obtaining that view. From this level the visitor will descend by either of three vast flights of steps, each 80 feet in width, to the nave before him, and the transepts on either hand. From these favourable stations the eye will range along the length of the nave itself, traverse the courts to either side, and take in the length of either transept, as its wings stretch to north and south. Upon this platform masses of shrubs are to be disposed, with fountains amongst them, it is hoped, and seats so disposed that, elevated above the intervening bodies of the moving throng upon the floor beneath, the spectator may contemplate the whole wondrous gathering at a glance, from the wall on the north side bounding the refreshment-rooms, to the massive piers on the south side, which already sustain the permanent picture-galleries. Every visitor to the Exhibition building of 1851 must have felt the want of some such point of vantage for obtaining a general view. None such existed there, and it was a common practice, as it is now at the Crystal Palace, to ascend to the lower gallery for the purpose in question,—a toilsome process, avoidable in the building now erecting, thanks to the genius of the designer, who has thus improved upon an obstacle to success. From the level of the dais the visitor may ascend to the galleries, which are to be a mile and a half long, surrounding the nave itself, and inclosing the courts on the north and south.

Before we proceed with our account of the progress made with the works, it will be needful to

enable the reader to judge how enormous is the amount of labour already done, by briefly recapitulating the nature of the general plan of the building, its skeleton as it were. The back-bone of all may be called the nave itself, running 800 feet from east to west, and 85 feet wide, and 100 high. At each end is placed a transept running north and south, 635 feet long, 85 wide, and 100 high; over the intersections of these are placed the gigantic domes, duo-decagonal in plan, 160 feet in diameter and 250 feet high: that is, 45 feet higher than St. Paul's, and 48 feet greater in diameter. Parallel with the nave, and connecting the ends of the transepts one with the other, runs on the south side the permanent picture-gallery, and on the north side the refreshment-gallery, which last overlooks the fresh verdure, the varied arcades, the terraces, flower-beds and fountain-cascades of the Horticultural Gardens. We have, therefore, for general plan, three edifices parallel to each other, i.e. the nave, the picture-gallery and the refreshment-gallery; these are connected by the transepts crossing the ends of all and inclosing two enormous oblong spaces, one to the north and one to the south of the nave. These oblong spaces are respectively divided into three portions, a small central and a larger wing court to the east and west. These courts are all surrounded with galleries, and, being the only portions that therein resemble the first Exhibition building, are lighted from the top by glass roofs. The north-central court is 150 feet by 86 feet; the south-central court 150 feet each way. The two courts on the north side, that lie to east and west of the central court, are 250 feet by 86 feet. The two courts on the south side, similarly situated, are 250 feet by 200 feet. The height of the whole is 50 feet. The galleries surrounding these courts, like those in the nave, are 25 feet from the ground; some of them are 25 feet and the larger ones 50 feet wide. It may be said that the western transept is extended 1,000 feet for the machinery-in-motion department. The width of this "annex," as it is called, is 200 feet, which is divided into four vistas, 50 feet wide each, of the lightest imaginable construction and most eminently picturesque appearance. As to the appropriation of the several portions of the building, it is briefly thus:—the nave, transepts, galleries and courts for the display of general industrial productions; the brick building on the north, inclosing the narrower courts, for refreshments; the grand picture-gallery extends along the south, and has auxiliary wings in front of the east and west transepts extending their whole length: these picture-galleries requiring to be lighted from the top, are placed above the entrances, which on the south side stretch to either hand for the display of carriages, &c.

Having thus given a general résumé of the whole structure, our readers will understand the gigantic amount of labour which has already been employed, and its great results, when we say that by the time these words are read, the whole nave will not only be erected from end to end, but actually roofed in, the wooden roof following the erection of the huge spanners, which go over the nave and make a vast vault of its enormous length and breadth, as rapidly as those spanners can be framed upon the ground, hoisted in two portions, and united together 100 feet high in the air. Upon these the angular frame-works of the roof (the rafters, so to speak) are placed, which give to the exterior roof its gently-sloping form, and harmonize so admirably with the semi-circular spanners of the arched roof itself. Upon these rafters is laid, as fast as they are erected, the weather-boarding, over which the patent felt, that forms the ultimate protection of the roof, is spread with equal rapidity. An immense increase of strength, without any additional weight or cost, has been obtained by laying this boarding diagonally across the framework of rafters, so that it ties together the whole roof it covers in. Along, step by step, as the huge travelling crane advances, lifting the spanners to its right and left (which it will be remembered are intended to cover in a span of eighty-five feet), the framework of the clerestory windows keeps pace, the great sashes, which are twenty-five feet square, being inserted between the

perpendicular sides of the spanners as rapidly as those spanners take their proper positions. All this will, it is expected, be completed by this day; moreover, as the roof goes on, the floors of the gallery are laid on either side of the nave and even now these floors are putting forth lateral feelers to cover in the basement arcades, or rather bridges, which connect the galleries of the nave with those along the north side of the permanent building for the pictures and carriages. Before long, the glass for the clerestory windows will be put in, and the whole interior of the nave thus secured from the weather, so that the operations of flooring and painting may go on during the winter, without delay. We will give an idea of the vast labour thus presented to the mind by saying that the nave and transepts contain 166 round iron columns, 12 inches in diameter, and the same number of square pillars abutting upon them. There are 312 smaller round columns of 8 inches diameter for the galleries, and 149 12-inch square pillars, with 138 8-inch clerestory round columns. For sustaining the floors of the picture-galleries, there are 160 10-inch square pillars. The glass-courts have 62 round columns supporting their roofs. Our authority goes on to say that, besides all this, the works in cast-iron alone comprise 1,165 girders, 11,600 feet of pipes, 15,000 feet of gutters, 14,000 feet of railings, 1,000 brackets, 700 trusses and girders and 1,400 shoes, the whole weighing nearly 4,000 tons. The whole of this ironwork may be said to be upon the ground, and by far the largest portion of it actually erected. Having thus far proceeded with our account of progress, let us remind the reader that it was not until the 9th of March last that the "setting-out" of the works commenced.

All this may be called a trifle, compared with the fact that the brick picture-galleries, whose foundations were not dug until some time after the date just given, now fairly stand complete, as far as the builder's part of the task goes, with the exception of a small portion at the west end. Not only this, but the roof is on for the whole length, the skylights are more than half glazed and partly painted. The bow-backed roofs above the towers, at either end of the galleries, double as they are, are just completed. The great centre tower over the main entrance in the Cromwell Road, is advancing. The joists for the floors of the picture-galleries are all placed, and the flooring itself will soon be laid down, now the roof is on. In this respect the contractors may be said to have been perfectly punctual, having got the roof on this portion during the current month, which will afford ample time for the drying of the building before the pictures are deposited. The Commissioners were anxious that this should be effected in order to profit by the experience gained at Manchester, where the entrance of wet and existence of damp are said to have seriously affected some of the choicest works of Art. Without such a precaution as this there could be little hope of getting together a large collection of pictures, comprising loans from private galleries. The east transept is in a similar condition to the main southern picture-gallery: roofed in, partly glazed and painted. The west transept is less advanced, but as soon as that on the east is a little more complete, the whole available strength of the workmen will be turned upon it, and what a thousand men, with several steam-engines and scores of horses, and every mechanical appliance to aid them, can do, will be seen in a very few days.

On the exterior of the southern or great picture-gallery will be remembered we described its chief ornamental character to consist of an arcade intercepted by a central porch and two minor ones in each wing, or rather beneath each of the towers on the angles. In the tympana of this arcade stucco is being placed, and in one an experimental—we presume it is experimental, at least—chromatic decoration has been placed, consisting of geometrical forms in lines and curves, following the construction, which appears tolerably satisfactory, as far as one can judge by the single bay yet seen. How it will look when repeated the whole length of the arcade is extremely questionable. With all our hearts we trust that the pretentious sham

of stucco, as now understood, is not now, nor ever will be placed upon this building. There is nothing so mean, so utterly paltry as this material, nor anything so calculated to injure the public taste for good Art, as its employment on a building which trumpets forth the love of Art, &c. as its birthright and inheritance. Bare honest bricks are infinitely preferable to this abomination, the cheap pretence of a handsome mask. If we cannot have stone, or tiles bearing colour, the last being the sole proper decoration and armour for simple brick, let us, for honesty's sake, have bare brick alone at present. It will speak little indeed for the architect's confidence in the beauty of his design if he cannot let it rest upon its own merits in the broad disposition of masses, &c., and if he considers the wretched stucco, that will need to be whitewashed every year, anything of a desirable addition to his work. We were given to understand that the building would remain undecorated, and be presented without a mask, until the funds allowed of a proper and really architectural system of decoration being employed upon it. The sight of the stucco above mentioned makes us protest against it and express an earnest hope that this material at least will be avoided. The poor plan of painting or staining the stucco, at any rate on the system of small lines and curves now to be seen in the tympan referred to, will be no improvement in the eyes of an artist or architect. Colour, to be effective and valuable, must be employed in masses, boldly disposed, especially upon a building like this in question, which is not by any means too bold or broad in effect. Frittering colour away in little stripes and bands, as now hinted at, will have no more than a pretty tea-garden-like effect, the pettiness of which there will be here no great masses of light and shade or bold disposition of form to relieve or overpower. It must not be forgotten that big domes and half-a-mile of arcading do not constitute a grand building of themselves, and that every effort should be made to give sobriety and mass of composition to the exterior.

The exterior of the west front is completed from its southern angle as far as the porch itself, and the centering framework for the porch is up; northwards of this, again, the front is complete. The arcade of clerestory windows, with their sashes, as we have said before, is placed. The gigantic scaffolds, needed for the construction of the domes, are complete, and present a most imposing appearance to the eye, being perfect forests of huge timber balks, bolted and tied together with a multitude of trusses and cross-pieces, divided into stages, or working platforms. The scaffold alone is above 200 feet high—taller than the Fire Monument of London, and looking much more effective than that does, pitched in a hollow as it is now seen. Under the east dome, this week will see completed the placing of the eight great iron shafts, which sustain the greater portion of its weight, to the height of 84 feet out of their total elevation. The topmost lift of this scaffold is now 200 feet high. After speaking of these enormous fixed scaffoldings, over which the domes are to be placed, as it were, on a core, and when that is done, and the enormously costly framework taken away, it may be worth while to speak of the not less astonishing and mighty traveller used in building the nave itself, before referred to, and never yet described. A "traveller," as it is called, ordinarily is a moveable framework, provided with crabs and windlasses for lifting great weights, which runs upon notched or ogeed trams placed upon a lofty wooden framework, that goes astride, as it were, of a building. For obvious reasons, the "traveller" now in question works *within* the building. It is about 90 feet high, just below the inner side of the roof itself, about 60 feet wide, and may be 80 feet long at the base. The whole of this huge temporary structure rests upon twelve wrought-iron wheels, which work upon a treble line of rails, four wheels upon each rail, of the largest size, both rail and wheel. When it is needful to move this enormous framework the stationary engines undertake the duty, and draw it along the railway laid down before it as it advances along the nave. Thus arranged, this "traveller" can be taken, vast as it is, along the

railroad with astonishing ease. When it has done its duty for the builders, the painters will take possession of it, and perform their function upon the building it has erected. Built at the east end of the nave, it will traverse the nave to the west, return for the painters' service, and then come all to pieces—the shortest-lived giant, and of the rapidest growth on record.

Having laid before our readers the progress of this astonishing building, let us remind them that seven months ago the turf was unbroken where it now stands, covering twenty and a half acres, sixteen of which are of a permanent nature, the least permanent being equally so with the Crystal Palace, while the really solid portion, that now most complete, is calculated to stand for ages, and is far more solid in construction than most public buildings erected in this country or abroad. They will stand thus for the service of the proposed decennial Exhibitions of Art and Industry. The Society of Arts has secured to itself already for ninety-nine years the portion it will require, and the Commissioners of 1851 have engaged a reservation of sixteen acres for ten years to come, at a ground rental of 1,000*l.* a year, or a total sum of 10,000*l.* by them to be paid. The whole cost of the building need not be laid upon the Exhibition forthcoming next year, although there is little doubt that the profits, if at all commensurate with the success of 1851, might with ease be employed to purchase the whole edifice as it will stand completed. Sixteen acres of the building may be purchased outright for 430,000*l.* The cost of decoration may be, and it is proposed it should be so provided for, defrayed out of the profits of future Exhibitions.

The mode of lighting the interior is threefold: the nave, by means of clerestories on either side, which therefore face the north and south aspects, and may be shaded on the latter from the sun by blinds. The picture-galleries will be lighted from the top with skylights and an inner roof of ground-glass, we believe, to relieve the strength of the light, and make the interior more secure against the intrusion of wet, almost impossible to provide against with a single skylight; the courts and the "annexe" are also lighted from the top. The carriage department, as it is called, and the refreshment department are lighted from the sides. 50,000*l.* is directed by the charter to be spent on the central portion of the building. The refreshment department, which, like the last, is also to be permanent, will consist of two halls, each more than 300 feet long, that is, much more than the length of the King's Library in the British Museum; they will be 75 feet wide. Upon these and upon the picture-galleries about eleven millions of bricks will be employed, about nine and a half of which have been already laid. Besides the cast-iron materials we have already mentioned as to be employed, 1,200 tons, or thereabouts, will be needed of wrought-iron for the enormous ribs of the domes. The piers at the entrance of the picture-gallery in the Cromwell Road are 14 feet wide and 7 feet thick; the foundations, of concrete throughout, are 5 feet thick. If the windows to the nave and transepts, which of course are in a double line, were extended in a single one, they would form a glass screen nearly a mile long and 25 feet high. The glass courts are to be 50 feet in height, the gallery inclosing them 25 feet from the ground. The Yorkshire stone blocks upon which the great columns rest in the concrete foundation, weigh each more than a ton.

THE KING OF THE GORILLAS.

Walton Hall, near Wakefield, Oct. 20, 1861.

IN M. Du Chaillu's book may be found the most incompatible exploits of his royal Gorilla. Sometimes it is a tottering cripple; then, the strongest beast of the forest; occasionally, the determined foe of man; then, at once, flying before his presence. Never in the trees (its proper habitat), but always on the ground! At one time roaring lustily (apes never roar), and at another time punishing itself by beating its unoffending breast so unmercifully that the sound of the strokes might be heard a full mile off. This king—this Proteus ape—felled

his black servant to the ground by a single blow from its giant fore-leg; and then it frightfully lacerated the abdomen—not with its teeth (the proper weapons), but with its nails, which are flat, and as impotent as our own for the performance of such a butchery.

In fine, let M. Du Chaillu and the learned naturalists who encourage him say and think what they choose of the "king of the Gorillas," *alias* the large black ape of Western Africa, its true position on the page of Natural History must certainly come to this, viz.,—when on a tree it is a paragon of perfection in the eyes of an omnipotent Creator; but when on the ground, it appears a "bungled composition of Nature." CHARLES WATERTON.

NOTES ON THE HISTORY OF PERSPECTIVE.

(No. III.)

October 21, 1861.

Jean Pélerin of Anjou was a canon of Toul in Lorraine. Nothing has been said about him: but a biography is shortly to appear, if it have not already appeared, by M. de Montaiglon. So announces M. Tross, at Paris, who also advertises fac-similes of the second edition of the work on Perspective, 'par le procédé de M. Pilinski,' which means, I believe, the anastatic process, or an improvement of it. So that Pélerin—or Viator, as he calls himself—stands a chance of being put in his proper place. The only Frenchmen I know of who mention him treat him with disparagement. Dechaux says that he gives *precepta communia*—things generally known—appositely enough; and that his work would not be contemptible if it were more full; while the drawings are well disposed, though not elegant. Montucla dismisses him with "Rien n'est plus mal et plus obscurement digéré"; and then proceeds to say that Pacioli and Albert Dürer (see No. II. of these notes) treated it more clearly in the works I have spoken of; while Peruzzi introduced the points of distance. The fact is, that Viator wrote the earliest printed work on Perspective, being the work which gave the name; introduced and explained—and not badly either—the points of distance; and alluded to, though he did not use, other vanishing points in the horizontal line. As in the following extract:—

"Le point principal en perspective doit estre constitué et assis au niveau de l'œil: lequel point est appelé fixe, ou subject. En apres, une ligne produite et tirée des deux pars dudit point: et en icelle ligne doivent estre signés deux autres points, equidistans du subject; plus prochains en presente, et plus esloignes en distante veue: lesquels sont appelés tiers points. Et en icelle ligne peut on faire autres points, ou il escherra apprest de edifice de plusieurs angles, ou autre chose de diverse situation."

I am open to correction in my statements that no earlier printed book exists, and that no predecessor, writer or not, can be *proved* to have used more than one vanishing point. But I will only take contradiction from one who has seen a book, and not a description. Montucla is an excellent historian, obliged by his plan to write over the whole of a specified ground, whether he had read over it or not. All encyclopedic authors are under this necessity: but some tell their readers when they are depending upon others, and not upon themselves. These candid writers are not treated as they deserve: many who only learn their faults from themselves have the audacity to find fault. Montucla does not state the limit of his own personal knowledge: Hallam does. Accordingly, Montucla is taken on trust: Hallam's readers often announce that he is very unequal, and apt to depend upon others. But they forget to state that they learn this from himself; and that if he had hidden it from them, from them it would have been hidden.

The title of Viator's book is 'De Artificiali Perspectiva: Viator': in the heading the adjective *positiva* is used. There are three folio editions of 1505, 1509, 1521, all printed during the author's life, at Toul (*Tulli*), the first being also the first book printed there. There is also Jousse's reprint of 1635. The third edition has the following verses, which are worth citing, both as a curiosity, and for the list of names of persons appealed to on the subject. The first edition has none of these lines: the second edition has only the nineteenth and twentieth:—

O Bons amis, trespassez, et vivens,
Grans esperis, sensins, apellens
Decorans franco, almaine, et Italie,
Geffelin, paoul, et martin de paye,
Berthelemi fouquet, poyet, copin
Andre montaigne, et danyens colin,
Le pelusain hans fris, et leonard,
Hugues, lucas, luc, albert, et benard,
Iehan iolis, hans grum, et gabriel,
Vuastele, urbain, et lange mical
Symon du mans : Dyamans, margarites,
Rubiz, saphirs, amaraiges, crisolites
Ametistes, iacintes, et topazes
Calcedones, asperes, et a faces,
Iaspes, berliz, acates, et cristaux
Plus precieus vous tiens que tels loyaux
Et tous autres nobles entendemens
Ordinateurs de specieux figmens.

Pincoaux, burins, acuelles, lices,
Pierres, bois, metaulx, artifices :
Tous speculateurs de la vive
Et glorieuse perspective.

The second and third editions are both in Latin and in French: the first is all Latin, except a few paragraphs at the end. On the very remarkable woodcuts I have not room to speak. Both text and plates mark out the use of the points of distance as the great feature of the book. Montucla could not have seen it: and I cannot find an English writer who mentions it. Mr. Panizzi placed the Museum copy of the first edition among the books which were shown to the public under glass at the time of the Great Exhibition; and described it as the earliest work on Perspective.

We now see how *perspective* gets its name. Viator wrote on *artificial perspective* or *artificial optics*; imitation by art of visual phenomena. When a specific noun, be it substantive or adjective, drops out by abbreviation, it usually leaves its meaning imbedded in the generic remainder. So Newton now is held to have propounded gravitation, not *universal gravitation*; the *engine* will soon mean nothing but the *steam-engine*; the *electric telegraph* is now the *telegraph*; and *perspective* is *artificial perspective* only. The change was rather rapid. By 1547, Jan Goujon, who drew and engraved the plates for Jan Martin's Vitruvius, finds it necessary, when he mentioned the old word *scenography*, to add "*c'est-à-dire, Perspective*."

Viator soon found a repeater. The Strasburg edition of the 'Margarita Philosophica' (1515), and perhaps some earlier editions, contains a short treatise on artificial perspective in the appendix. The title is 'De Artificiali Perspectiva Positiva.' The terms, the method, the diagrams, and the designs, are all palpable copies and imitations of Viator: but, as was common, no mention is made of the source, though the very text is but paraphrase. Since I first noticed this, I find that Dubreuil, the Jesuit, says that the 'Margarita' is the earliest work he had met with on Perspective, and then mentions Viator as second. This means that he had only seen Viator's third edition: the second and third editions are only announced by the words *secundo* and *tertio* after the author's name. At that time it was so little the custom to number reprints that the second word in "Viator. Tercio" might have been unintelligible.

Another encyclopedist took up the subject twenty years after Reisch. This was Joachim Sterk, or Fortius, commonly called Ringelbergius, a friend of Erasmus; he died in 1536. This man was an amateur artist and engraver. It is singular that his biographer, Melchior Adam, writing about 1615, cannot find a Latin word which he can trust to be understood as meaning *engraving*. He is obliged to say that Ringelberg applied himself to "*artificium celandis picturas in aere levigato, conversa imaginis forma, ut appposito stramento eadem in chartis multis exprimi possit*": the italics are his own. In the collection of syllabuses which ranks among the early encyclopedias, published in 1531, and for want of definite title usually called 'Ringelbergii Opera,' perspective, under the name of optics, is very conspicuous by the efficiency of the diagrams. The method, the explanations, and the character of the designs, are from Viator. I may as well state that if any one should chance to find illustrations of perspective, of the period 1510–1600, containing, as exemplifications of distance, monks and nuns in strict outline, without even features, looking like chess-pawns deprived of the stands, he may be sure that

his author is a copier of Viator. As Ringelberg was very brief and clear, his work must have contributed greatly to the diffusion of the new art of drawing, with its points of distance. The system thus received considerable circulation.

The next work I should have to examine, if my plan were more extensive, would be the architecture published by Serlio, 1537–40. Perspective forms a part of the work: whether taken from Peruzzi or from Da Vinci matters little now; we must come to the end of the century before we find the next step of progress. Tiraboschi says that the first complete work was that of Daniel Barbaro, Venice, 1569, folio: and, works in which perspective is subordinate to architecture being reserved, I believe he is right. Daniel Barbaro was renowned for his breadth and depth of learning. I cannot imagine why Montucla should call him the unfortunate (*malheureux*) patriarch of Aquileia; if he were, on the whole, worse off than the other holders of that see, they must have had and been a fortunate lot. Barbaro lived and died in peace, honour and orthodoxy—for he sat for the last seven years of his life in the Council of Trent. He died in 1570, and was celebrated, says Tiraboschi, by all the greatest writers of his century for the extent of his learning and the excellence of his character. His work is to be noted for my purpose as showing that, though he obtained results of the most complicated kind, and must have been or employed a most able draughtsman, there is no trace of any advance in methods. Danti says that Barbaro copied a great part of Pietro di Borgo's work into his own: to which by this time we say—of course.

A geometrical treatise had appeared some years before Barbaro published; and, as its author notes, the first of the kind: I mean a treatise with demonstration. It is in the commentary of Commandine, the editor of Euclid, to his edition of Ptolemy's Planisphere, Venice, 1558, 4to. Before he explains Ptolemy he will write, he says, on the subject *generatim atque universe*: the mode of describing the appearance of a figure in a given plane is *nothing else* than finding the common section of the proposed picture and of a pyramid or cone of rays. To this text he sticks, and demonstrates graphical constructions of the several faces of the figure he wants to describe. Accordingly, a given cube is more difficult to draw than a given pyramid; because it has more faces. Of vanishing points, or of the joint property of parallels, I can find no trace, except in the practice of his wood-engraver, who certainly did not follow the method of his principal.

The sixteenth century may be described as the day of a very few rules, and laborious application guided by natural sagacity. The architect's desiderata were nearly gained: Viator implied the way of reducing the throwing off any given distance from the picture to mere graphical rule; while the old property of the ocular point, as it was sometimes called, made it easy to erect any given height at the point so gained. And an architect who can set up any height from any ground-point, is in possession of nearly all necessary power, though he may desire more facility. Those who wanted to exhibit perspective for the sake of perspective, as Da Vinci, Barbaro, and others,—for instance, Goldschmidt, of Frankfurt, in 1564,—exercised themselves on all manner of polyhedrons, as already noted. Dürer and Barbaro also give a great deal of attention to paper construction of the solids, in the manner of which the only English instances I know of are in a work of Cowley, probably known to some of my readers. The faces of the polyhedrons are to be drawn on paper, each face being joined to one of those to which it is to be adjacent in the finished solid. The paper is then cut in the extreme outline, and the edges which are to coincide are brought into position by creasing and turning. Barbaro always constructs his solid in this way before he shows how to put it into perspective. So far as I have troubled myself to read his methods, there must have been an immense quantity of subsidiary construction, the results of which were transferred by the compasses to the intended picture. With nothing but the centre and the points of distance in the way of vanishing points, the draughtsman of our day would not like

to construct the *mazzocco* or *torchio*, as Barbaro calls it, which he says is a very difficult figure. In his example it is a ring, the section of which is everywhere a regular octagon. This ring is to be drawn in perspective, and equidistant octagonal sections are to be exhibited: or, being cut into a large number of equal slices, alternate slices are to be withdrawn, leaving the others standing.

I conclude my notes of the sixteenth century by a mention of the work of Sirigatti, published in 1596: this only because, long afterwards, it was affirmed that Brook Taylor's methods were inferior to his. This affirmation gained no assent, and is, I have no doubt, wholly without ground. Had there been any truth in it, unquestionably Guido Ubaldo, to whom we are coming, would have been more obnoxious to the same depreciation. As it very often happens that improvements are made nearly at the same time by independent investigators, it will be for any one who writes a full history to see whether the asserted reasons for the denial of Taylor's superiority have any of that sort of foundation—of which the examination I have made gives no trace—which might allow Sirigatti to be considered as a link of the chain which connects Agatharchus with the present time. But it must be remembered that whatever may be the value of history now inferred from the contents of a book, little or no reliance is to be placed upon ancient historical statement, unless duly supported. We are told by the Jesuit that in his time (1642) it was commonly believed that the points of distance were recent inventions. It may be suspected from this notion that even the points of distance had then but recently become really popular, that is, had but recently reached the lower order of perspective draughtsmen. As late as 1695, Andrea Pozzo affirms that though the point of sight is pretty well understood, there is a great deal of confusion and mistake about the points of distance.

A. DE MORGAN.

OUR WEEKLY GOSSIP.

Shakespeare's Gardens are saved to the public for ever! New Place was not sold yesterday, as advertised, by auction, but was disposed of, on the 22nd inst., by private contract. The purchase-money was 1,400*l.* Half of that sum has been already subscribed; and there cannot be the slightest doubt but that the other half will be immediately forthcoming, and that Mr. Halliwell, who has, in the mean time, secured the property, will have no reason to do other than congratulate himself on his assuming what we may well call this national agency. Mr. Sheridan, M.P., and Mr. G. L. Prendergast, author of a 'Concordance to Milton,' have each subscribed 100*l.*, and Mr. Payne Collier and other gentlemen have expressed their readiness to contribute to the good end in view. In affording this intelligence, we feel it would be altogether incomplete and unsatisfactory if we did not add that this "Holy Land" of England, as we have ventured to call it, will be conveyed, under trust, to the Mayor and Corporation of Stratford-on-Avon. Henceforth it is the honourable mission of that municipality to guard this hallowed ground. They are nominally the proprietors, on the reasonable condition that *never* shall a building be erected in the gardens, and that to the latter the public shall be freely and gratuitously admitted for ever. It is impossible, so far, that anything could be more complete and satisfactory than this arrangement, the accomplishment of which is most creditable to Mr. Halliwell. It only remains for the public to supply the remainder of the purchase-money, and thus have the privilege of sharing in a worthy deed—one of moment enough to almost stir the honoured dust that lies close by in Stratford Church.

A Christmas book is announced for publication by Messrs. Newby & Co., under the title of 'Wit and Wisdom,' by Mrs. Mathews, mother of Mr. C. Mathews. We may add that the retirement of this gentleman as an actor is also spoken of. It is said that he will shortly commence an entertainment on his own account, resembling, in some respects, the "At Homes" of his father.

It is said that the story of the alleged quarrel

between Mrs. Piozzi and Dr. Johnson will receive some new light from fresh matter which will be included in the second edition of that lady's 'Autobiography, &c.' A selection from her marginal notes in books is also promised. We have seen an annotated 'Wraxall's Memoirs,' the notes in her well-known clear handwriting, but we fancy that these will not be contained in the forthcoming edition.

Mr. Sala is making arrangements for the republication of his Papers on Hogarth in a separate form. The book, with additional matter, an appendix and a catalogue of Hogarth's works, will make two volumes; and will require and reward abundant illustration.

A comedy by Lady Dufferin will, it is said, be shortly produced at the St. James's Theatre.

Mr. Robson is expected to re-appear at the Olympic Theatre on Monday next as the principal person in a new farce.

Travelling Englishmen who read in the French playbills that a new drama in five acts, called 'Le Lac de Glenaston,' and preceded by a prologue in one act, called 'Les Chercheurs d'Or,' will have a difficulty in recognizing their old friend, 'The Colleen Bawn' of the Adelphi, especially as in the list of persons the young lady herself is named Jane, whilst the vacillating Hardress Cregan becomes Georges Sydney; and Danvy Mann is doomed to bear the singularly compounded appellation Jackmoor. If our travellers visit the theatre they will find that new matter has been introduced into the story, wherein Californian gold plays a part hitherto unknown. Jane (that is, Eily) is not a mere *fille du peuple*, but is the illegitimate daughter of Anne Chute's mother, Mistress Petterson, and Frederic Herbert, a gentleman who goes to California to seek his fortune. Herbert succeeds beyond his warmest expectations, indeed, becomes so very rich that his cousin, Corrigan, who is his only heir, and who joins him at San Francisco, contrives to have him murdered by a couple of bush-rangers, and then learns from the lips of the dying man how there is an illegitimate little damsel in "ould Ireland," who has been entrusted to an honest priest, and is now declared the sole legatee of her father. Corrigan returned home, has thus an interest in getting rid of Jane, and takes a part in the plot against her life. At the end, when his villanies are discovered, he shoots himself. Our readers, by grafting these new incidents upon the Adelphi story, and giving Georges (Hardress) a father instead of a mother, will understand what sort of piece has been written by M. Dennery for the Ambigu-Comique. The alterations are not without the sanction of Mr. Boucicault, whose name honourably appears in the programme.

Mr. Falkener asks us to correct a slight error in the review of his 'Essay on the Hypethron of Greek Temples.' It was there stated (Oct. 19), "He himself (Mr. Falkener), in a subsequent passage, admits the picture to have been a failure." In page 9 of the Essay he wrote, "I regret that it is impossible to express in a *small photograph* this effect of colour, which can only be observable in a coloured drawing."

The National Portrait Gallery will be closed from Saturday, November the 2nd, to Wednesday, November the 20th.

In a western suburb of London a few persons have been admitted to witness a work of art in the coffin way. An artist-upholsterer having furnished an opera-box much to the satisfaction of the lady who gave the order, she further commissioned him to provide her with a "fourteenth-century coffin." A very superb article has been produced accordingly. The modern-antique is unexceptionable in form and adornment, including some gorgeous white satin in the interior, in which lies a large quantity of the same material which is to serve for a "wrapping-sheet" when the time for opera-boxes has altogether passed away. Meanwhile it will do duty as an article of furniture; and as serving to illustrate a social trait of the present time, is not unworthy of having record made of it here.

Messrs. Low & Co. publish a pretty gift-book, entitled, 'Little Bird Red and Little Bird Blue,' a tale of the woods, by Mr. M. Betham Edwards, illustrated by Mr. T. R. Macquoid. The text of this trifle is written with great spirit and taste; and, although simple, not at all foolish, as most children's books are, but sprightly, easy and graceful. The tale is told in verse, in the form of a dialogue between certain flowers, birds and children. Mr. Macquoid's illustrations, many of which are printed in colours, are in excellent keeping with the text, which is on every page inclosed in a pretty rustic border. We heartily commend the whole to the juveniles. The same publishers produce another child's book, 'Great Fun for our Little Friends,' illustrated with large and humorous woodcuts by Mr. E. H. Wehnert. The text of this production appears to be intended for children of a lesser growth than those who might be delighted with the first-named little book. The illustrations are, some of them cleverly and others coarsely done. Considering that several of them display the escapades of certain uproarious young folks who get into indescribable mischief, and amash everything to right and left, we are rather in doubt if the initiative instincts of the small public will be directed in a manner calculated to enhance the comfort of the seniors who are expected to purchase the work. We should not like to see sons of ours standing on their heads, or immersing themselves, clothes and all, in the nursery bath. These are matters of taste, no doubt!

The American Polar Expedition returned to Halifax on the 9th inst. Smith's Straits proved impenetrable even in two successive summers, on account of the ice. On the west of Kennedy Channel, however, the party made some way on dog-sledges, advancing, in that direction, as far as 81° 35'.

Intelligence has reached us from Stockholm, to the effect that the Swedish scientific expedition to Spitzbergen, under the guidance of Mr. O. Torell, safely arrived on the 23rd of September at Tromsøe in Norway. Having reached Danes' Island on the 22nd of May, the officers explored the north-eastern, northern, and western coasts of Spitzbergen. A considerable number of positions have been astronomically determined, by which the old maps will receive important corrections, a valuable set of meteorological and other observations has been formed, and very large collections in geology, botany and zoology. Deep-sea soundings were also made in the Arctic Ocean, and several species of living mollusca, crustacea, &c., were brought up from the depth of 1,000 and 1,300 fathoms.

The three volumes of Herder's Correspondence, published five years ago by Herder's grandson, Ferdinand Gottfried von Herder, and Prof. Heinrich Düntzer, of Cologne, had not exhausted the rich mine of the Herder family records. In 1859, Herder's letters written to his wife during his journey to Italy, in 1788, were edited by Prof. Düntzer; and at present the same indefatigable explorer of the classic period of German literature, joined again by Herder's above-named grandson, has commenced the publication of a new epistolary collection, which is to embrace, in three volumes, the rest of the great man's correspondence. The work is entitled, 'Von und an Herder: Unge-druckte Briefe aus Herder's Nachlass,' and the first volume, which has just appeared, contains the correspondence with Gleim and Nicolai, besides literary introductions from the pen of Prof. Düntzer, discussing the nature of Herder's relations to Gleim and Nicolai. The following volumes will present us with the correspondence with Heyne (the philologist), Hartknoch, Eichhorn, August von Einsiedel, Karl and Friedrich von Dalberg, Knebel and others.

"In the interests of international courtesy and honour," writes a Correspondent who professes to have published tales, "do I call your attention to a recent instance of a bad, gone-by fashion of translation,—and this in no less classical and doctrinary a periodical than the *Revue des Deux Mondes*. There M. Forgues professes to introduce the strange American snake-romance of Dr. Holmes,

'Elaie Venner.' Our French readers are hereby warned that the deed is done in the most arbitrary fashion of outline. It is not merely that episodic scenes (such as some of the humorous ones, which appear tedious on this side of the Atlantic) are sacrificed and concentrated: important incidents are omitted or slurred over, and characters are thrown to a faint and vaporous distance, which, in the original, stand out as essential supports to the principal figure. I will but instance that of the Negress, faithful unto death to the fearful and melancholy semi-human creature she watches over. In these days, when invention is so scarce, it is not fair that one so thoroughly peculiar and rivetting as that of the novel in question should be thus tampered with in a publication of such authority."

Liouville's journal, as all mathematicians know, has been very useful, and has made a wide reputation. But what has happened to the journal, that it now contains no papers except those of the editor himself? We have before us the advertisement of the Sixth Volume of the Second Series, with contents. Thirteen papers by M. Liouville contain all the food he has for his readers, except one communication from a gentleman of the appropriate name of Painvin. But this is not all: the thirteen papers are all exhibitions of isolated theorems of one class. The first is on the product of two prime numbers which divided by 8 leave remainders 3; the last consists of *new remarks* on prime numbers which divided by 24 leave a remainder 7. Is it that contributors have left off sending papers?—or that M. Liouville thinks the properties of special forms of precise numbers are better worth consideration than anything they have sent? We hope for the future never to see more than six such theorems in any one volume of the journal, unless M. Liouville should meet with some primes which divided by 20 leave a remainder 10, in which case we will allow him seven.

The ghost of George Robins is revisiting the pale glimpses of the moon, and must be appeased by the feeling that his example was not tendered in vain. An auctioneer advertises a Northumbrian estate for sale, and describes it as the "throne of the graces, modelled in the grandeur of nature, upon that fairest of streams, the Coquet, and forming a panorama of sylvan scenery that centuries since sheltered the anchorite, and gave to local history so interesting a page." So says Mr. Donkin; but this is nothing to what follows:—*allez donc!* "With features of no ordinary stamp, their expression must be seen to be admired—if not worshipped. The language of grove, of rock, of cavern and of cascade will then be heard in all the poetry of nature, while surrounding objects lend enchantment to the view."—Warkworth Hermitage, that pilgrimage of Northumberland—the castle, that vestige of Norman power, articulating in broken accents the idiom of a forgotten tongue. The highway of nations on the one hand; on the other, the pathway of Aëriel." What that may be we would not even presume to guess; but we know that this is very fine writing; and, by way of contrast, we give with it a copy of an inscription, which is quite in another style, and which may now be read on the south side of the Serpentine river:—"It is hereby ordered by H.R.H. the Duke of Cambridge, Ranger, that all persons who bathe in the Serpentine do conduct themselves with decency and propriety; that they are hereby enjoined from passing under the arches of the bridge and from committing any nuisance. George, Ranger." "It is hereby ordered that they are hereby enjoined from" is a style which we know not how to characterize. We do not suppose that it is "royal," but H.R.H.'s signature seems to give approval of the "exercise" of his subordinate. Whatever it may be, however, we find it surpassed in a consular notice which comes from Japan. In the course of a notification, dated Kanagawa, July 7, Mr. Consul Howard Vyse writes:—"British subjects are requested to be careful how they walk about during the next week, the undersigned having heard that the streets of Yokohama are likely to be exceedingly crowded, and to remain at home during the evening." Even the Donkin magnificence of language is, perhaps,

superior to this. Altogether, however, we may say that a little more regard for English might be profitably observed by all parties. Indeed, in the one respect of being fine, it is hard to say where we may not get to. We saw, the other day, over the door of a hairdresser's at Cowes, a graceful concession to the pronunciation of fast young gentlemen. The individual in question announced himself as a *Perukia!*

SCIENCE

MEDICAL BOOKS.

Ourselves, Our Food and Our Physic. By Benjamin Ridge, M.D. (Chapman & Hall.)—Dr. Ridge gets worse as he grows older. We recollect having to notice his remarks on the condition of the tongue in disease, or glossology, as he called it, with approbation. He then indulged in some wearisome lucubrations in a work on 'Health and Disease,' which if he had never published, it would have been better for his reputation. In this last work he must have determined to cut into his profession. Wretched pathology, with bad physiology and worse taste combine together to make this a most objectionable book. Yet Dr. Ridge is clearly a man of ability, and, if he would devote himself to the working out of some problem in physiology or pathology, might do good service to his profession. The present volume is intended to be popular in style and professional in matter; but the latter is not made simple enough to be understood by the public; whilst the profession cannot fail to be repelled by the conceited and off-hand style which the author has chosen to adopt.

Sore Throat: its Nature, Varieties and Treatment. By M. Prosser James, M.D. (Churchill.)—This little treatise by Dr. James, on Sore Throat, is very superior to the ordinary run of small books on medical subjects. He has evidently made diseases of the throat his study; and, in addition to his own views on the subject, he is very frank and candid in giving the views of others. He has read extensively, not only books in his own language, but the papers of both French and Germans; and, if he has not exhausted the literature of the subjects on which he writes, we cannot but make allowances when we see him including in the term "sore throat" such diseases as diphtheria, croup, and thrush. Dr. James was one of the first to use an instrument for examining the throat by reflected light, the principle of which has just been adopted with so much success in the examination of diseases of the eye. The laryngoscope is evidently an instrument deserving the attention of medical practitioners in examining diseases, more particularly of the larynx. In his treatment he is a great advocate of the administration of aconite, and gives several cases, in an appendix, in proof of its efficacy. To our mind, however, the cases prove very little in favour of aconite, and look very like cases in which even the infinitesimal doses of the homœopath would have been just as useful. As a good epitome of diseases of the throat, we commend Dr. James's unpretending volume.

Household Medicine; containing a Familiar Description of Diseases. By John Gardner, M.D. (Smith, Elder & Co.)—The most efficient books on household medicine are those which are devoted to the prevention rather than the cure of diseases. When diseased action has once set in the body, the results may be too serious to allow for a moment that every man may be his own doctor. It is for this reason that we think books like Dr. Gardner's are calculated to do far more harm than good. Many a sick man or anxious mother will be turning over the pages of this book when they had better have sent for their medical man. Those who advocate the teaching physiology for the public do not for a moment imagine that this knowledge will enable them to treat their own diseases; and any one who would advocate such a notion is encouraging a delusion. As well might a man expect to be able to make his own coat, or to mend his own shoes, as to treat his own diseases. But a sound knowledge of physiology will not only enable a man to prevent the causes of

disease in his own person, but will teach him the advantage of placing himself when he is ill under the care of an educated practitioner of medicine. The excuse for such books as Dr. Gardner's is, that clergymen, missionaries and others are constantly placed in positions to practise medicine where no doctors are to be met with. To such persons Dr. Gardner's book may be found useful. It contains a good mirror of the average practice of medical men of the present day, reflecting alike their errors and excellencies. The author is seldom a step in advance in any direction. He is a devout believer in the action of medicines as laid down by Cullen and Jonathan Pereira. He believes still that calomel and blue pill act powerfully on the liver, and cause it to secrete bile, although it has been proved over and over again that they do no such thing.

On Food and its Digestion; being an Introduction to Dietetics. By W. Brinton, M.D. (Longman & Co.)—The present volume is the work of an accomplished physician, and cannot fail to be of interest both to the professional and general reader. Although in the form of a treatise, the style is evidently that of a man accustomed to teach; and, in fact, we are informed by the author that he has reproduced some of the materials already included in his Lectures on Digestion previously published. He commences by taking a general view of the nature of food and the purposes it subserves in the system. The definition of the word "food" occurs as a difficulty to him, as well as most writers on this subject. He joins issue, however, with the teetotalers, and regards alcohol as food. The chapter on alcoholic drinks will be read with interest just now, divided as the profession is upon the propriety of giving up alcohol altogether or administering it in very large quantities. What is really wanted in this discussion is a series of comparable cases, sufficiently extensive to afford reliable results, treated with and without alcohol. As we have often observed, individual experience is a most fallible guide. Medical men are more influenced by successful than unsuccessful treatment; and it is only the unerring result of figures applied to facts that can determine this and many other moot points in medical practice. Dr. Brinton gives a very complete account of the processes of digestion, and a good résumé of the properties and use of the principal articles of diet. There is also a chapter on cookery, and another on the choice of food, or diet, which contain a number of valuable hints and suggestions on these subjects, which are not generally so much studied by the medical profession as their importance demands.

The Origin and Nature of Disease in connexion with Homœopathic Treatment. By G. Calvert Holland, M.D. (Edinburgh, Jack.)—This is a very melancholy book. It is the record of a man not without considerable power of investigation and reflection, lost amongst the miserable fogs of medical speculation. In its audacious assertions, its unphilosophical spirit and unsparring attacks upon the successful cultivators of practical medicine, it has no rival that we recollect but in the 'Novum Organum' of the empiric Hahnemann. The three great elements which seem to contribute to the production of an homœopathic practitioner are, want of success in legitimate practice, the absence of habits of inductive inquiry, and an overweening confidence in the results of their own limited experience. That these were the great moving causes of Hahnemann's career no one can doubt who will carefully read the book we have alluded to; and every page of Dr. Holland's work testifies to the presence of the same conditions. We had hoped from a man of Dr. Holland's acknowledged abilities that when he had declared himself in favour of homœopathy, he would have indicated some middle way between those who practise this system and the older practitioners. But Dr. Holland is a devout believer in the absurd and unreasonable dogma that like cures like, and the potency of Hahnemann's infinitesimal remedies, even to the twelfth dilution. To reason with men who have thus deliberately given up the exercise of their mental powers is impossible.

SOCIETIES.

ENTOMOLOGICAL.—Oct. 7.—J. Lubbock, Esq., in the chair.—Mr. Waring exhibited some beautiful specimens of *Noctua sobrina* and *Ypolophus juniperellus*, taken in Inverness-shire during the past summer. Mr. Pascoe exhibited some rare and interesting Coleoptera found by him in the South of France, amongst which were two singular species of blind beetles, from a small limestone cavern near Hyères. Mr. Miller exhibited a beautiful moth of the family *Geometridæ*, reared from a larva found near London, which he believed to be a species hitherto unknown. Prof. Westwood exhibited a specimen of *Myrmecolax Nietneri*, a strepsipterous insect found in Ceylon, parasitic in ants, of which a single example only had hitherto been detected, exhibited at the Meeting of the Society in August, 1858, and subsequently figured in the *Transactions*. Prof. Westwood also exhibited the larva of *Volucella inanis* and *Anthomyia inoana*, two dipterous parasites found in the nests of the common wasp (*Vespa vulgaris*), by Mr. S. Stone.—Mr. Stainton read a paper 'On the Synonymy of *Laverna langiella*.' Mr. Waterhouse read some remarks on doubtful species of Coleoptera, contained in his recently published List of British Species of that order of insects.—Prof. Westwood communicated descriptions of some new species of exotic Lucanidae.

MEETINGS FOR THE ENSUING WEEK.

FINE ARTS

ASSYRIAN SCULPTURES IN THE BRITISH MUSEUM.

WE resume our description of the sculptures which have recently been placed in the Assyrian Basement Room at the British Museum, with those now upon the exterior quadrangle formed by its walls. These represent, first, a series of Lion Huntings of Sardanapalus the Third, from the North Palace at Kouyunjik, (Chamber C, 20, 27). The scale of the figures is larger than that of those before described; their execution is not only more elaborate, but infinitely more artistic and spirited. Clear, sharp and decisive as the engraving on a gem, these designs have the manipulation of a much advanced period of Art. It was to them especially that we referred, in declaring the new sculptures to be not unworthy of comparison with the carvings of Phidias himself. The genius of a great artist is discernible in every part; each man, each animal, is marked with an individuality of characterization which evinces a deep and "knowing" observation of nature, and that of a rare kind; for it has been employed by a person who not only saw, with the zest of a keen intelligence, the various incidents of the transactions passing before him when he studied for his subject, but brought to that study an already attained knowledge of the peculiarities, and even of the anatomical structure, of the creatures he would have to delineate. The informed student will attentively examine these productions of a long-lost realm and age, and recognize in them the scarcely incomplete fruit of a system of Art to which fortune denied nothing but opportunity for development. Here, indeed, is a nascent school of sculpture, independent, spirited, life-like and strong. The artist will see how misapplied much of the art is, how painting alone could have expressed that which was here sought to be told; for sculpture, shackled by perspective, needs a more severe curb than these people of old Assyria could submit their art to. In fact, no sculptor could succeed in what the artist attempted; a knowledge of perspective could only show him a boundary that must not be overstepped. Probably, in recognition of this barrier most of the superiority of the great Athenian bas-reliefs,—Phidias had learnt when to stop. The Lion-hunts we shall first enter upon are carved in low, flat relief, on long slabs that have lined the walls of a descending passage. From some unexplained cause, the tablets are not absolutely straight, but the top and foot margins are in a sloping curve, so that the middle is lower than the ends,

much as a long band of tapestry would be if suspended against a wall by the two upper corners only. It has been suggested that a representation of tapestry was really intended by this peculiarity, but, as no further attempt at such a thing is discoverable, the notion will not find general assent. At our left hand on entering the room will be observed a deep hole, evidently ancient, cut ruthlessly through the marble slab itself, having a rudely wrought arched top and its edges roughly chamfered off, while the foot is flat and square; this aperture has been made for the reception of a lock or bolt of a door cutting off transit through the passage. The Lion-hunts were enjoyed by the Assyrian monarchs in a vast park or paradise nigh to Nineveh, a whole district set apart for the pastime of the king,—a New Forest in fact. The character of the country was evidently level, but, no doubt, contained streams, trees and underwood of all kinds. Nevertheless, such matters are not shown, for the artist has reserved all his power for the men and the animals. It is this concentration of power, and certain qualities of execution, which lead us to hold these designs so high above the section before described, in which all kinds of natural accessories appear, as trees, herbage, fruit, rivers, castles, fish, &c. In short, the right limits of sculptural art are evidently discerned, though not reached, and the carver was concentrating his energies in order to be strong.

To take up the numbering of the slabs from where we left off, we will consider Nos. 33 and 34. The king is standing upright in his chariot, which contains likewise two guards and two charioteers. The guards spear a mighty lion that, springing upon the axle-pole with a roar, clutches it with his huge fore-paws, and strives to enter the vehicle,—an arrow, discharged before he comes to close quarters, has struck him in the neck, and a second entered his loins, goading him to fury; but the king, holding a bow in his left hand, and impassive and fearless, as ancient sculptors ever show royalty to be, thrusts through the brute's throat a broad-bladed sword. The charioteer urges forward the horses over the carcass of a second beast, to escape the pursuit of a lioness, who flies angrily after the first, and would aid him in the assault. Her expression is finely given, its femininity being perfectly distinct from the masculine character of the male brute. This distinction is carefully made throughout the whole series, and is well worthy of admiration. Bound round the chariot, by a belt, is the king's quiver, with tall feathered arrows standing in it. The cap, or tiara, upon his head is most exquisitely carved, with three bands of ornament, gold work, set-jewels, or rich embroidery. We are of opinion that much of the embossed work shown on the garments, weapon cases, and harness of these sculptures is intended to represent *cuir-bouilli*, or leather moulded and stamped when hot, which, being painted, set with jewels and gilt, would produce just the substance represented here in such profusion. The embossing on the king's costume is not confined to the tiara; but the whole surface of the dresses is overwrought with delicate ornament. On the slab numbered 34 is the hole with the arched top, above mentioned as intended for a lock. The marks of the tools are distinct upon its edges. In No. 35, a lion has received an arrow through one of his eyes; and, with that extraordinary fidelity of representation which distinguishes these sculptures, being thereby wounded in the brain, rears himself upright, with rigid tail, and spines, in an agony, round and round, vainly trying to break out the shaft with one of his paws. The vigour of the action of the maimed creature is strongly in contrast with the limp, relaxed look of the corpse of a lioness, which, on the upper part of the slab, lies dead, just as she fell, pierced with three arrows. The languor of the heavy trunk is finely expressed by the marking of a broad fold of skin, which its weight presses out beneath her back. The retracted claws admirably mark the life to be gone from the creature.

In No. 37, the king's chariot flies, as before, over the carcass of a lion. In both, the subject is differently designed; in that now before us the

spirit of the work is beyond praise. The lion, enraged by the great arrows, has dashed after the chariot and caught the fellow of the revolving wheel in his jaws, and bites it furiously, hanging on to the chariot with his claws; his mane is all a-bristle; his ears pointed forward and erect; the loose skin upon his nose corrugating as he bites. The king, with the calm smile, appears him in his wrath. The garments of the monarch are, again, most delicately elaborate; he wears a tight-fitting coat, of the minute ornamentation of which we shall endeavour to give an idea by saying, that upon a square space upon the breast is twice repeated the characteristic Assyrian rosette; between these are the miniature figures of two priests before an altar, presided over by the winged deity (Baal), who is always represented within a circle; the mystic and symbolical tree is between the priests. This little sculpture, so delicately wrought upon the block of solid stone, and so marvellously preserved, is not more than three-quarters of an inch square, and yet the action of the figures and character of their costumes are perfectly expressed. Beyond the margin, and forming, as it were, a rich framework to this, are no less than nine distinct lines of varied ornamentation, all as exquisitely wrought as on the most finished gem or medal-die; one of these is identical with the pattern of alternate roses and half-expanded lotus-blossoms to be seen, as elsewhere, upon the splendid piece of carved pavement which lies upon the floor of the room here, and shows upon its worn surface the tracks of the bare feet of the slaves who waited upon Sardanapalus so many thousand years ago. Round both the upper arms of the king are twined bangles of ductile gold, which, going twice round the limbs, have a star-shaped flower in the centre, and show their bulk and weight by the boldness of their relief. The right arm is bare to the wrist from the elbow, and bears a bracelet (not worn on the left, on account of the bow being held in that hand) on the wrist; the left is covered with an extension of the tunic: a broad belt of leather goes round the king's loins, and a narrower girdle is placed above it. Upon the wheels of the chariot are shown the metal bands which held them together.

In the next slab is a lion, vomiting blood; three arrows are in him: one of them has gone through his lungs—hence his action. The torrent rushes through his mouth, and the belly of the brute is drawn up, as he squats on his haunches, in the action of retching. There is really something pitiable about this creature as he sits pouring out his life, and not without an odd expression of surprise and bewilderment about him. Above this, a lion just in the last faint agonies of life, tries to reach, with a weak claw, an arrow that has pierced his belly. Below, a third lies upon his back, giving his ultimate kick. Next, is a lioness; three arrows in her (the artist conveys to us his idea of the vital energy of these brutes, and the danger of the sport he represents, by almost invariably showing that it takes three great arrows to despatch them): one of these has gone through her shoulder, one through her back, and the third, penetrating her loins, has paralyzed her hinder extremities, which she drags impotently after her, while roaring and gnashing her teeth with a futile rage that can spend itself only in a fierce grasp upon the earth with her fore-paws. If anything was required beyond the action of the lung-wounded lion and the brain-wounded lion, spinning in an agony, to prove how earnestly the sculptor availed himself of the opportunities Sardanapalus undoubtedly gave him to study the actions of the hunted, wounded and dying lions—and even that he must have had a knowledge of their anatomy—it would be this last crowning instance of the creature pierced through the lower part of the spine, dragging her hinder parts, lifeless and beyond the control even of her own fierce will, because the nerves which bade the mighty muscles act and gave vigour to the agile trunk were severed at their roots.

Then following is a eunuch, and a huntsman on horseback, the last with a three-thonged whip. Above these is a lion wounded with four arrows, and crippled in the shoulders, sneaking sulkily off,

looking backwards as he hobbles—for hobble he does, and we know no more expressive word for his action than that old Saxon one. This completes the series as shown on the first section or curtain. In slab 41, the king seems going out to hunt; he is in the chariot, into which three grooms are backing the horses, with a most felicitously-rendered action. The three next slabs display three lines of design, as before; or rather they attempt to show us after the manner of a picture, as distinguished from that of a piece of sculpture, a whole scene or action at once. It is a hunting-field, the Paradise, as enjoyed in ancient Assyria. On the margin of the ground, and in order to prevent the escape of the game, stand two attendants, holding up a screen of cloth or the like fabric, upon two staves; behind them, are two stalwart spearmen, without shields, and then four others, with huge circular shields, reaching, as they stand, to the lips of the bearers; these are bare-headed: outside of all are seven of the guards, who wear the crested helmets. In the centre, horses are brought in; and there is a subject of lion-hunting like the first we described. In the central slab (45) appears what has been styled a hunting-temple,—a building situated on a mound amongst trees, through the groves of which men are seen stealing or going; one is calling to another (perhaps it is to express the intricacy or denseness of this grove that this incident is given); there appear the fat, beardless personages we call eunuchs amongst these people. Under an arch is a miniature representation of a king hunting, in all the circumstances before described—spearing the lions, &c.—which some critics declare to be an attempted reproduction of a picture, but which we consider as more probably one of a carving like those we are describing (especially if the building in question be not a temple at all, but a *chalet* or hunting-box), a mere carved decoration upon the wall, appropriate to the situation and uses of the edifice containing it. Above are little figures, two men and two eunuchs, bearing water-skins slung round their necks. In the following subject dogs are introduced; a double row of guards, archers, and spearmen,—the last, having their spears advanced, keep the ground:—there are four men as a front line holding huge dogs (the carving of these is gem-like in its exquisiteness). The scene, as shown on the slabs to No. 51, and presumably inclosed in the above-described circle of guards, is little else than a wholesale slaughter of lions. One, attacking the king in his chariot as before, springing clear of both ground and chariot, being wounded by two arrows, receives in his body the points of the spears of the king's companions, while the king has himself discharged an arrow at a runaway lion further off, who is already wounded by three shafts; the king's arrow is shown as flying along in the air. Quickly discharging another shaft, the king, with a grim smile upon his lips, draws the bow, its tips carved with lions' heads, to his shoulder; his left arm, rigid, strong, eagerly expressive, holds the weapon by its twine-bound centre, and brings the keen-headed arrow close to his forefinger, while the right arm draws backwards the string. Behind the chariot lie five beasts, a lioness dead, another struggling, a lion with five arrows stuck in his shoulder. Over the field gallops a eunuch sitting lightly in his saddle, upright, bow in hand, and quiver on back. Beneath the chariot lies a dead lion, and next, a lion vomiting blood, differently designed from the previous one; another struggles with an arrow, and then another, dead, his limbs crumpled up beneath him; further on, one kicks upon his back, and then, one with an arrow through his ear strives to paw it out. There is one vomiting blood, trotting faintly along and halting, for an arrow has gone into his shoulder. The crowd of brutes is made up with one wounded in the neck, one in the lungs, and one in the loins. Below is a dead lioness, and a lion vomiting blood from an arrow having gone into his chest, and, like the lion mentioned before, paralyzed by a shaft through the lower part of the spine.

On slab 52 gallop two eunuchs, and below is a representation of a lion being let out of a cage in which he has been brought from some distant

forest to the Paradise. He comes out, crawling stealthily and roaring low in fear, as the door of the open-barred cage is drawn up by an attendant standing, himself protected by a framework, upon the top of the cage, which, from its construction, has evidently been drawn, sledge-like, along the ground by horses. The scene is closed by a row of guards, as before, completing a representation as finely designed as it is interesting and unique, illustrating ancient life in one of its most exciting aspects and incidents, such as none other could have rendered to us so faithfully and so well as the keen-eyed carver of Sardanapalus's court.

FINE-ART GOSSIP.—Mr. E. M. Ward's picture, in fresco, to be placed in the Commons corridor of the Houses of Parliament, representing the flight of Charles the Second with Jane Lane after the battle of Worcester, will shortly be placed in its proper situation. Next week, we may give a full account of this work.

Mr. W. Johnstone suggests to the manufacturers of photographic views for the stereoscope that a considerably enhanced effect may be obtained by affixing the picture to a *blackened* card, instead of the light-coloured descriptions now generally used. Any one can test this by taking a hair-pencil and darkening the border of a "slide" all round with China ink or other black pigment, so as to leave no part visible but the picture. In the case of sculpture, Mr. Johnstone states that he finds the improvement very marked.

Lieutenants Porcher and Smith, who have been engaged for a considerable time past in recovering antiquities at Cyrene, have left that place, it is understood, finally. The marbles found by them will be placed in the British Museum, where we recently reported the arrival of a large portion of such works of Art.

Some discoveries of a remarkable character, says the *Scotsman*, have been made recently in Perthshire. Mr. Paterson, farmer, Barns, on the estate of Kincardine, in the course of removing some stones from a knoll lying near the farmstead, came upon a flag of nearly a ton weight, under which a grave was discovered. The sides were formed of four flag-stones placed on edge, and a similar one formed the bottom. The grave contained the remains of a human body, "which must have remained many hundred years." The space which contained the skeleton is about three feet and a half long, barely two feet wide, and two deep. In this space the body could not, of course, have been laid at length, considering that the bones were those of a full-grown person. The grave is supposed to be that of a Roman. Several others of like description have been found in the district. More recently still another Roman grave has been found, within two miles of the same place, on the estate of Blackford. While a farmer was ploughing, the implement came in contact with a Roman urn, containing a quantity of bones. The vessel was entire, with the exception of a portion of the bottom. As is very frequently the case, the urn was placed with the mouth downwards, covering the bones; it was about 18 inches long, and 19 inches wide at the mouth. Numerous coins have been found in the same locality. "The troops of Agricola," says our authority, "on their march to the camp at Ardoch, came through Gleneagles, and, consequently, would pass near the spot indicated."

In Hunmanby Church, near Filey, Yorkshire, will be found a remarkably fine Norman chancel arch, of considerable span, about thirteen feet, and of great elevation for the style in which it is wrought. The view of the chancel from the broad and bold nave of the church is highly picturesque, and even impressive, notwithstanding the introduction of a poor Perpendicular window at the east end, which was made about thirty years ago, during a general restoration of the edifice. Some attempted renewals of the original colouring about this arch and opening have been made, which are tolerably successful in tint, if not very characteristic in the pattern employed for its display. The tower has some interesting points about it; it is, in the

lower portion, of twelfth-century character. The entrance to the interior, through a shallow porch, is notable, being under a very plain square-headed opening, over which is a semicircular discharging-arch resting on chamfered impostes; the tympanum, which is much wider than the door-opening, is flat and plain. In the rebate are the original hooks for the door, and within is the ancient bolt-hole for a wooden bar: inside the porch may be seen the fragments of a Romanesque font, undoubtedly the original one, and still worthy of repair; this has been tastelessly replaced by a modern and very poor imitation of a Decorated font. About midway in the height of the tower, on the external south side, is an excellent specimen of a two-light Norman tower window. Inclosed within a well-preserved billet moulding, set upon a semicircular dripstone, resting on corbel-heads, are the two openings, round-headed, long in form, separated by a shaft with cushion-shaped capital and square base. This window lights a remarkable little chamber of unknown use, about seven feet long, two feet wide, and six high. From its elevation this may have been intended for a look-out, but it is too distinguishable externally to be regarded as a secret chamber. There is but one aisle remaining to the church,—that on the north of the nave. The piers separating it therefrom have been restored in a Decorated fashion: on the wall above them are painted the armorial bearings of the lords of the manor of Hunmanby. On the south-east angle of the chancel remains an original Norman buttress, of one stage only, weathered in on both sides to the wall. The wooden Decorated roof is exceedingly good in character, and in perfect preservation; it has double principal rafters, king-posts and struts, and is well worthy of study for its effective aspect. A good deal of feebly-tinted modern stained glass has been introduced in the windows with somewhat doubtful advantage, as is commonly the case in modern glass; indeed, nothing strikes the observer of such works more painfully than the timid, cold, poverty-stricken look of the stained glass now usually employed: generally speaking, it looks more like coloured ice, than a revival of the old chromatic glories of the glass-stainer's art.

MUSIC AND THE DRAMA

ROYAL ENGLISH OPERA, COVENT GARDEN. under the Management of MISS LOUISA PYNE and MR. W. HARRISON, Sole Lessees.—GREAT SUCCESS of the NEW OPERA.—On MONDAY, October 28, and during the week, THE MARRIAGE OF GEORGETTE. Miss Thirlwall and Mr. Henry Corri. After which, at Eight o'clock, Howard Glover's New and greatly successful Opera of 'RUY BLAS.' Supported by Miss Louisa Pyne, Misses Susan Pyne, Thirlwall and Jessie M'Lean; Messrs. Santley, A. St. Albyn, Patey, &c., and Mr. W. Harrison. *Pos de Deux.* Mlle. Lamoureux and Mr. Henry Payne.—Conductor, Mr. Alfred Mellon. Commence at Seven.

EXETER HALL.—'Elijah' was very well performed, according to promise, on Tuesday evening, for the re-appearance of Madame Goldschmidt. As is her wont, she gave to every bar her utmost of power, earnestness and finish. The scene of the widow and the 'Sanctus' of angels could not have been more finely delivered. We fancied her more solicitous for force than formerly, as if effort was required to make the voice speak;—but this might have been accidental. The applause which fell to her lot (and great it was) was legitimately shared by Mr. Sims Reeves, who was in admirable voice,—and by Miss Palmer. This young lady's singing of the *contralto* music of the oratorio, usually divided, cannot be overpraised for its refinement, its truth of feeling and its absence of exaggeration. It was so thoroughly masterly as to make all peculiarities of voice forgotten, and to place her on the level of the queen of the evening, though with means to charm originally more limited. But there is no keeping back those who will think and work as well as feel.—Herr Goldschmidt conducted 'Elijah' carefully.

ROYAL ENGLISH OPERA.—'Ruy Blas,' with which new tragic opera Miss L. Pyne and Mr. Harrison opened their season the night before last, is a mistake from first to last,—the details of which it would serve no one's purpose to analyze, and for the results of which the management will do well to provide at the earliest possible moment. The

theatre was full, and the performers were well received.

PRINCESS'S.—On Saturday, Mr. Brougham gave the public another example of his dramatic cleverness (we use the word advisedly) in the shape of a burlesque, called 'Po-ca-hon-tas,' which, in the United States, was very successful. Burlesque in America has not arrived at that perfection in which, unfortunately, it flourishes in England; and our cousins were not, it seems, a little pleased with the present specimen, which, being produced on their own soil, they thought, of course, to be quite equal, if not superior, to any produced on this. An historical anecdote forms the basis of the work, not a serious drama; and, therefore, the author had the task of original construction, as well as of caricature, to encounter. The former is very simple, and the latter not so full of conceits as we have been wont to be amused with in similar works of home-growth. Our burlesque writers, from Planché to Byron, are yet unapproached. The story, however, is effectively, if unelaborately, treated. The buccaner, *John Smith*, whom history names as the *Father of Virginia*, is represented by Mr. Harris, and has his share of musical parodies; while the tyrant *Powhattan* is embodied in Mr. Brougham himself, with the usual stage-aggravations of royal pretension. The heroine, *Pocahontas*, who, according to the story, flung her arms about the condemned prisoner, and thus rescued him from the savage tomahawk, was supported by Miss Helen Howard. In the play she marries Smith, though not in history, which reserved her for another husband, six years afterwards. Mr. Brougham has contrived to mix up the most incongruous elements. Thus we find that the Tuscarora Indians are not entirely wanting in the accommodations of civilized life, and the young ladies possess the inestimable benefit of an Italian academy. The schoolmates of *Pocahontas* accordingly play a part in this strangely-assorted spectacle, and defend the adventurer from the doom to which he is sentenced, forming themselves into a troop of *Toxophilites* for the purpose. Mr. Brougham has depended much on his musical catches, which are so numerous as to make some scenes almost entirely operatic. His puns are frequent; and his applications to London life and the events of the passing day as often make their opportunity of introduction as find it. The action of the piece was preceded by a kind of prologue, in which Miss Rose Leclercq, attired as *Columbia*, deprecated severe criticism and pleaded for indulgence. The fall of the curtain was followed with great applause.

On Wednesday, the long-expected appearance of M. Fechter, in 'Othello,' was brought to the test of public approbation, and it must be confessed, when considered in all its aspects, rather exceeded than fell below our expectation. The delay that had taken place in the performance was found to have operated favourably on the treasury. All the seats in the stalls and dress-circle had been taken, and no money was received at the box-office. The management acted wisely in not overcrowding the house, and the play was witnessed with comfort and ease by a fashionable and intelligent audience. Notwithstanding his great success in *Hamlet*, it was felt that, in attempting *Othello*, M. Fechter was putting himself to a severe trial; and we had yet to learn that, as a declaimer, his command of the English pronunciation was equal to the great passionate speeches of the part. It may as well be stated at once, that his opening scene somewhat excited our fears. His foreign accent was more observable in *Othello* than in *Hamlet* from the beginning, and, occasionally, throughout the performance; but we were set at rest by the admirable manner in which his address to the Council was delivered. Here was nothing of the set oration, but, long as the speech is, all was familiar discursing; the emphatic phrases being selected with unexceptionable judgment. In this scene, too, we had the exemplar of those stage-arrangements which, in every scene of the tragedy, are so judiciously made, and so extensively applied, that the present revival is likely to make an epoch in the history of stage managements. The furniture

was so disposed that it was available to histrionic purposes; and the characters could lean upon it, and adopt either a sitting or a standing attitude, just as either might contribute to the general picturesqueness of the scene. Mr. Ryder, as *Iago*, availed himself of the council-table, when left to himself, for his conversation with *Roderigo*, and the soliloquy in which he concocts his infernal plot against his master's peace. In this and other instances throughout the play it was evident that, both with regard to him and the other performers, the general business had been arranged by M. Fechter, and that, in taking their positions, they were working together on a general plan. The result was, that the performance had an air of naturalness and reality, sufficient of itself to command success. The second act opened with a view of Cyprus painted by Mr. Telbin, and a set scene admitting of great variety of action. And here, too, *Iago* was provided with means of making himself more effective in his sarcastic impromptu, which he pronounced with his arms folded on a short pillar, on either side of which sat *Desdemona* and *Emilia*. The quarrel-scene was similarly disposed. In this act *Othello* has little to do. The beginning of the third act takes place in a palatial apartment, sumptuously furnished, and containing an ample table, with *Othello's* official papers, at which he seats himself to commence his ordinary business, when *Iago* quietly advances towards it, and, as it were accidentally, lets drop his insinuations, to which *Othello* at first listens with indifference. But his attention and curiosity get gradually awakened, and then commences the agony of the jealous passion: in all this M. Fechter was admirable. In what followed it was evident that the physical force was wanting to the full vehement display of the passion. The actor was all the more thrown upon his intellectual resources, and never was judgment rendered more available to subdue difficulties that had to be conciliated rather than forcibly overcome. The pathos of some of M. Fechter's phrases was exceedingly fine, and his prevailing tenderness towards *Desdemona* most expressive. The fourth act was in part reconstructed. The character of *Bianca* is introduced, and the lady is seen with the handkerchief, just after *Othello's* recovery from an epileptic fit; and thus the original intention of the poet carried out, in giving to *Othello* sufficient grounds for believing the suspicions with which he had been so artfully inspired. The act ends with the assassination of *Roderigo*, which takes place in a square occupying the whole extent of the stage, and contributing greatly to the effect. The last act is but one scene—*Desdemona's* bed-chamber—which opens on the water; *Othello* standing at the window, listening to the boat-parties singing the song of 'The Willow,' which Shakespeare had intended for *Desdemona*. We have seen the play performed in German, in which, in the bedroom scene, the song was sung by the *Desdemona* of the evening; and we would willingly have exchanged for it that in the square, and the way-laying of *Cassio*, which by the German performers was, as we have always thought, judiciously omitted. M. Fechter has omitted much from the fifth act, and, indeed, substituted his own for the poet's idea. He hurries on to the address and the tale of the turbaned Turk whom he smote for traducing a Venetian, and, suiting the action to the word, he seizes on *Iago*, forces him to his knee, and drawing his poniard as if about to revenge himself on his tempter, strikes it into his own heart. Such is our reverence for Shakespeare that we cannot commend this alteration of the poet's business; and, indeed, upon the general question, as we have already intimated, there is yet much to be said which we may shortly take an opportunity of declaring. As to the performance before us, we scarcely ever remember a more efficient representation of the whole play. It was strongly cast, and the actors had plainly benefited by M. Fechter's instructions. Mr. George Jordan, a new actor from America, was excellent as *Cassio*; and with the exception of *Emilia*, which Miss Elsworth made too demonstrative and too declamatory, all was conducted in a natural and conversational tone, which in its effect upon the house was as satisfactory as it was novel. There is no doubt

that M. Fechter has initiated a revolution in the English style of acting, and one which, after having excited the proper re-action, will operate beneficially on the practice of the English stage. The scenery, we have already intimated, was exceedingly beautiful; we have only to add, that the costumes were gorgeous, and that, as a spectacle, the entire representation excited the utmost astonishment even in practised playgoers.

SADLER'S WELLS.—The spectacular revival of the season was produced on Saturday, when Shakespeare's 'Midsummer Night's Dream' was represented with new scenery and appointments. The former, by Mr. James, was remarkably picturesque and beautiful, and an improvement even on that provided for the same play on its original revival at this house eight years since. In some respects, also, there is an improvement in the acting, Miss Atkinson and Miss Murray supporting the characters of *Hermitia* and *Helena*. The eccentric part of *Bottom*, the weaver, was impersonated by Mr. Phelps with his usual skill. The house was full, and the manager complimented with the customary ovation, as was also the scenic artist. The costumes, supplied by Mr. May, were appropriate and elegant.

OLYMPIC.—A new piece was produced on Monday, slight in texture, but affording some opportunity for good, expressive and really dramatic acting. The main interest of the play is not dependent on any remarkably new motive, but the dialogue has much of originality. It is entitled 'Wooing a Widow.' *Major von Walstein* (Mr. Neville) is a man placed in one of those peculiar positions in which he might be happy if his will were not coerced, but who has as much objection to yield his love as *Falstaff* had to surrender a reason on compulsion. Frederick the Great commands him to marry by proxy a certain *Gertrude* (Miss Hughes), which he does; but the lady is dissatisfied till she has put his capability of loving her to the test. Accordingly, she lays her plan to travel with him in the same diligence, and there excites his interest and his gallantry. A stupid *Count Muffenheim* (Mr. H. Wigan) also gives her the opportunity of trying whether the Major can be made jealous, and thus she tests the sincerity of his newly-awakened love. The acting of Mr. Neville was of such excellence as to give uncommon interest to the situations in which the Major is drawn, and stamps him as a young performer of the greatest promise.

MUSICAL AND DRAMATIC GOSSIP.—We are once more beginning a season in which choral societies already extant, and others possibly to be formed, will do their best to offer attractions to the lovers of music who may be expected to crowd and to congregate in London ere this day twelvemonth arrives.—The weekly rehearsals are announced as having begun, at Exeter Hall, by the *Sacred Harmonic Society*.—Mr. Martin, whose report of the *National Choral Society* honestly records loss on the past year's operations, has begun again—with what?—with practisings of 'Elijah' on Wednesday, after Madame Lind-Goldschmidt had exhibited her singing in the Oratorio on Tuesday. In all this, there is not so much progress as the obstinate constancy of fashion. 'Elijah' is, beyond question, the greatest musical work of the past five-and-twenty years; but we pay dearly for its beauty and greatness if (as seems too likely) we disdain every other modern Oratorio because it is not 'Elijah.' Then, there is a treasury of ancient compositions as yet unexplored in England. Which Society will give us the 'Christmas Oratorio' of Sebastian Bach? we ask again. Who knows, save by perusal, Haydn's 'Stabat'? To ask for the sacred music of Cherubini and Lesueur is, for the present, vain, we are aware. There are works by Wesley which bear a high reputation. Why is their reputation all that is to be heard of them? For the hour—for the year—these inquiries and suggestions will fall dead; but we repeat them from time to time, in the assurance that when England really becomes the musical country which she professes and appears to be,

their spirit will be acted on, and the duty and pleasure of research become as much a part of the artist's life and the public's desire as the hearing and hearing again a few works by a few masters, be the same ever so mighty.

Mr. Morton is giving a selection from 'La Circassienne,' M. Auber's last opera, at the "Oxford."—To-day, Mozart's 'Impresario' is to be sung at a Crystal Palace Concert, by Madame Lemmens-Sherrington, Miss Eleanora Wilkinson and Mr. Seymour.

The performance of 'Alceste,' which took place on Monday, was brilliant and successful to the heart's content of all who are interested that the best things in art should be duly appreciated. Madame Viardot's acting was a triumph from first to last; the performance was throughout good and spirited. We shall not be surprised if the revival of 'Alceste' keep the stage with as much tenacity as that of 'Orphée.' It is vexatious that in order to know these superb dramas the English must have to travel to Paris.

The Anniversary Commemoration Festival of St. Michael's College, Tenbury, founded, it may be recollected, by the Rev. Sir Frederick Ouseley, with the express view of diffusing the study of church music among the clergy, was held on the 2nd of this month. Among the features of the meeting, which, we are informed, was numerously attended, was a sacred Cantata on "the Hundredth Psalm," by Mr. W. Pole.

A Committee, we are informed, has been organized, with the object of offering a testimonial to Signor Costa, in the course of next season, in recognition of his remarkable services to music in England. A fitter object could not in music be found; be it remembered, too, that the case of Signor Costa is unique, since he has gained a European fame and pre-eminence during an unbroken residence in London. A success more gradually won—more thoroughly merited—is not in the annals of music.

It was currently reported on the Boulevard des Italiens, some days ago, that Donizetti's 'Anna Bolena' is to be revived at the Italian Opera of Paris for Madame Alboni.—Signor Mercadante's 'Leonora' is more certainly to be given there. An American lady, Miss Adelaide Phillips, is engaged.—In our last notice of this theatre, Signor Volpini was printed for Signora—the lady about to appear in 'Martha.'

Scribe has left an opera-book in the hands of the patriarch of French composers, M. Auber. The music to this, which is entitled 'La Fiancée du Roi de Garbe,' is said to be nearly ready.

The *Gazette Musicale* of Paris announces a singer, Senhora Rosario Zapater, who will not come out yet for awhile, though she is now, when only seventeen years of age, an accomplished mistress of her art, with a remarkable voice.—Surely a *prima donna* becomes a rarer and rarer singing bird year by year. At Naples, the management of the Teatro San Carlo has engaged for its winter season Madame de Vries as "leading lady."

The great meeting of the "Orphéonistes" in Paris, at which 8,000 voices were to sing, was held last week. This appears to have excited less sensation than the former gathering.

The German papers have lately been publishing an inventory of all the earthly possessions left behind him by poor Mozart, and of which his widow had to give account to his creditors. The list is a mournfully meagre one. Among the musical MSS. left was the score of 'Le Diable à Quatre,' by Gluck—whether opera or ballet is not specified. This is not mentioned in the biography by Schmid.—Mozart's 'Idomeneo,' an opera all but unknown to the English public, has been revived at Karlsruhe.—Schubert's opera, 'Der Häusliche Krieg,' seems to be making way in the German theatres.—A new opera, 'Die Mühlenhexe,' by Herr Emil Naumann, was to be given in Berlin in the course of the autumn.—Herr Gläser, whose 'Adler's Hörst' excited sufficient attention in the German opera world, some quarter of a century since, to be translated for England, is just dead. Of late years he had sunk out of sight

as a composer.—The course of the career of M. Gounod's 'Faust,' which is going the round of Germany, does not altogether run smooth. Some of the pedants profess themselves outraged at the liberties taken with Goethe's drama, after having for nearly half a century endured the wretched book set by Spohr and held their peace over the cantata-text of M. Berlioz.—Their own great men have not been immaculate; and this even when the task has been one demanding a more considerate strictness than the arranging an opera-book. That their Schiller thought he could mend Shakespeare's version of 'Macbeth' shows. Perhaps the fact is found hard to swallow, that a 'Faust' by a Frenchman has beauty enough to possess itself of the stage of the country.

A posthumous comedy by Scribe, entitled 'La Frileuse,' has been produced at the Vaudeville Theatre, without success, in spite of the aid given to it by the presence of Mlle. Cellier, who is now a reigning beauty of the Parisian theatres.—M. Bouffé has returned to the stage at the Théâtre Gymnase.—The Parisian version, or rather call it equivalent, of 'The Colleen Bawn,' 'Le Lac de Glénaston,' has been successfully produced at the Théâtre Ambigu-Comique.—M. Janin is not unjustifiably sarcastic over the new triumph of stage-carpentry. "The header," he says, does it all.—A new comedy, 'L'Attaché d'Ambassade,' by M. Meilhac, and a new actress, Mlle. Juliette Beau (had ever candidate a more auspicious name?), are between them attracting the world to the Théâtre Vaudeville.—The two new theatres in the Place du Châtelet, the Cirque and the Théâtre Lyrique, are all but ready to be handed over to their occupants, and will be opened shortly after New Year's Day, 1862. They are spacious buildings; but some will owe them a grudge for closing the view from the opposite side of the Seine of that picturesque relic, the tower of St. Jacques de la Boucherie.

Music in church—as distinguished from church-music studied in the closet or the concert-room—is scarcely an object of criticism. Many amateurs, however, will receive a new musical impression from the Greek rite in the new temple built for the Russians close to the Barrière de l'Étoile in Paris. As a building, the edifice, though somewhat of the gaudiest, and necessarily less costly in material than the mother-churches of Russia, has a character of its own, which redeems many faults of taste and execution. Then the liturgy and the prayers are accompanied by responses and chanting,—the music worth little as composition, but impressive from the richness and precision of the voices of the choristers. These are inferior singers compared with the more numerous choirs who accompany the musical ritual in its old Slavonic language at home. But their intonation, their thorough mutual consent, and the sonority of their full chords, which embrace *falsetto* and *contrabasso* male notes, afford a new experience and pleasure totally apart from devotional associations.

Since certain paragraphs appeared in the *Athenæum* advancing German claims to the melody of 'La Marseillaise,' on the strength of a MS. Mass existing at Meersburg, on the Lake of Constance,—the collection of fifty French songs by Rouget de L'Isle has fallen in our way. They range in date between 1776 and 1820, betwixt a world destroyed, a world restored, betwixt Robespierre and Kléber, Chénier and De La Vigne; the composer having his elastic loyalty and patriotism ready in his mouth for all ruling comers. (Strange, withal, that he should have been upheld and aided by Béranger.)—But the honesty or mercenary enthusiasm of De L'Isle is not here the question. It is noticeable that more than a fourth of these fifty songs of his are warlike or patriotic: also that the first of fifteen such compositions bears a date far anterior to the year 1792, when 'La Marseillaise' was thrown off by De L'Isle (says its preface) at Strasbourg,—in direct literal plagiarism from (say the Germans) a MS. Mass proved to have been earlier in existence: the work of a known man.—Granted any amount of coincidence, the proof of the plagiarism required must be stronger than mere traditional preservation of a record to be

satisfactory to musicians,—and for a simple reason. In the fifteen national songs by Rouget de L'Isle above specified, one thing is remarkable. Not only is their style *vulgar-French*,—that of a sharply accented melody, containing the common trumpet intervals dear to later romance-writers (witness the familiar 'Brûlant d'amour'),—but the family-likeness among them is so great as to suggest the Meersburg Mass as the inevitable parent of the whole progeny, if it be of any single line,—and that its literal transcript must have been reserved for the Republican Hymn, after it had done the duty of suggesting half-a-dozen earlier strains. Those accustomed to follow the course of invention, who in the earlier works of some writers have traced germs, sketches and peculiarities of character one day to be completely wrought out (let Mr. Thackeray's 'Vanity Fair' be instanced), will find it less easy to admit the gross plagiarism than to imagine that the evidence may be weak in some of its joints.—The question to ourselves seems not settled.

MISCELLANEA

Science and the Mercantile Marine.—At the late Meeting of the British Association in Manchester, Dr. Collingwood, of Liverpool, read a paper before Section D, 'On a Scheme to induce the Mercantile Marine to assist in the Advancement of Science, by the Intelligent Collection of Objects of Natural History from all Parts of the Globe.' The object of this scheme was twofold: first, to raise the social and educational status of the captains and others engaged in the Merchant Service; and, second, to render available the vast opportunities they enjoy of advancing science, by intelligent observation in various parts of the globe. Considerable discussion was elicited by the reading of this communication, and an influential Committee was appointed to report upon the subject. As chairman of that Committee, Dr. Collingwood has since made several important advances in the maturation of the scheme, the chief of which are as follows:—It being considered of the last importance that the sanction and co-operation of shipowners should be obtained, a meeting was convened last week, in the Mayor's Parlour, Town Hall, Liverpool, at which some of the most influential shipowners of that port were present, as well as the Chairman and Secretary of the Mercantile-Marine Service Association; Mr. T. M. Mackay, of the firm of James Baines & Co., occupying the chair. The meeting having been informed of the nature and progress of the movement, and the subject having been discussed, the gentlemen present promised their support, both nominal and pecuniary if necessary, and the Mercantile-Marine Service Association were requested to draw up some form of certificate, as a reward for industry and diligence in any of the departments in which it is anticipated that they can be serviceably employed:—this certificate to be signed by persons of influence, to be afterwards decided upon. Another important step, which it is hoped will be the pioneer of similar movements in other scientific societies, is the following:—The Literary and Philosophical Society of Liverpool is a society now in the fiftieth year of its existence, and Dr. Collingwood, its secretary, has procured the adoption of a law, which was confirmed at the last meeting, empowering the Society to elect as *Associates* "masters of vessels, or others engaged in marine pursuits, who may have peculiar faculties for adding to the scientific interest of the Society's proceedings." These Associates are to be in every case recommended by the Council, and to be limited in number to twenty-five, having the same privileges as Corresponding Members. Such a distinction we have reason to believe will be highly prized by many intelligent captains, and will stimulate others to make use of those opportunities which they so abundantly enjoy, in such a manner as cannot fail to benefit themselves and to advance science. We trust to see other scientific societies adopting the same course.

NEW WORKS AND NEW EDITIONS

PUBLISHED BY

DEIGHTON, BELL & CO.

AGENTS TO THE UNIVERSITY, CAMBRIDGE.

OBSERVATIONS on the ATTEMPTED

APPLICATION of PANTHEISTIC PRINCIPLES to the THEORY and HISTORIC CRITICISM of the GOSPEL. By W. H. MILL, D.D., late Regius Professor of Hebrew in the University of Cambridge. Second Edition. With the Author's latest Notes and Additions. Edited by his Son-in-Law, B. WEEBS, M.A., Perpetual Curate of Sheen. 8vo. 14s. [Now ready.]

A PLAIN INTRODUCTION to the

CRITICISM of the NEW TESTAMENT. For the Use of Biblical Students. By E. H. SCRIVENER, M.A., Trinity College, Cambridge. 8vo. 15s. [Now ready.]

CAIRO to SINAI and SINAI to

CAIRO. Being an Account of a Journey in the Desert of Arabia, November and December, 1860. By the Rev. W. J. BEAMONT, M.A., Fellow of Trinity College, and Incumbent of St. Michael's, Cambridge. With Map and Plates. Fcap. 8vo. 5s. [Now ready.]

A CONCISE GRAMMAR of the

ARABIC LANGUAGE. By the Rev. W. J. BEAMONT. Revised by SHEIKH ALI NADY EL BARANY, one of the Sheikhs of the El Ashhar Mosque in Cairo. 12mo. 7s. [Now ready.]

The EXAMPLE of CHRIST and the

SERVICE of CHRIST. Considered in Three Sermons preached before the University of Cambridge, in February, 1861. To which are appended, a Few Remarks upon the Present State of Religious Feeling. By FRANCIS FRANCE, B.D., Archdeacon of Ely, and Fellow of St. John's College. Crown 8vo. 2s. 6d.

The SEVEN WORDS SPOKEN

AGAINST the LORD JESUS; or, an Inquiry into the Motives which led Him to utter them. Being the Hulsean Lectures for the Year 1860. By JOHN LAMB, M.A., Senior Fellow of Gonville and Caius College, and Incumbent of St. Edward's, Cambridge. 8vo. 5s. 6d.

A COMPANION to the NEW TESTA-

MENT. Designed for the Use of Theological Students and the Upper Forms in Schools. By A. C. BARRETT, M.A. Fcap. 8vo. 5s.

PSALTER (The), or PSALMS of DAVID

in ENGLISH VERSE. With Preface and Notes. By a MEMBER of the UNIVERSITY of CAMBRIDGE. Dedicated by permission to the Lord Bishop of Ely, and the Reverend the Professors of Divinity in that University. 5s.

A GENERAL INTRODUCTION to

the APOSTOLIC EPISTLES, with a Table of St. Paul's Travels, and an Essay on the State after Death. Second Edition, enlarged. To which are added, a Few Words on the Athanasian Creed, on Justification by Faith, and on the Ninth and Seventeenth Articles of the Church of England. By a BISHOP'S CHAPLAIN. 8vo. 5s. 6d.

On the IMITATION of CHRIST. A

New Translation. By the Very Rev. the DEAN OF ELY. 12mo. 3s. 6d.

The STUDY of the ENGLISH LAN-

GUAGE an ESSENTIAL PART of a UNIVERSITY COURSE: an Extension of a Lecture delivered at the Royal Institution of Great Britain, February 1, 1861. With coloured Language-Maps of the British Isles and Europe. By ALEXANDER J. D. DORSEY, B.D., English Lecturer at Corpus Christi College, Cambridge; late Head-Master of the English Department in the High School of Glasgow. Price 2s. 6d.

A COMPANION to WRIGLEY'S COL-

LECTION of EXAMPLES and PROBLEMS, being Illustrations of Mathematical Processes and Methods of Solution. By J. PLATTS, Esq., Head-Master of the Government School, Benares; and the Rev. A. WRIGLEY, M.A., of St. John's College, Cambridge, and the Royal Military Academy, Addiscombe. 8vo. 15s. [Now ready.]

BY THE

Late W. J. DONALDSON, D.D.,

Fellow of Trinity College, Cambridge.

A COMPLETE LATIN GRAMMAR.

SECOND EDITION.

Very much enlarged, and adapted for the Use of University Students.

By J. W. DONALDSON, D.D.

8vo. 14s.

The Enlarged Edition of the Latin Grammar has been prepared with the same object as the corresponding work on the Greek Language. It is, however, especially designed to serve as a convenient handbook for those students who wish to acquire the habit of writing Latin; and with this view it is furnished with an Antibarbarus, with a full discussion of the most important Synonyms, and with a variety of information not generally contained in works of this description.

A COMPLETE GREEK GRAMMAR.

SECOND EDITION.

Very much enlarged, and adapted for the Use of University Students.

By J. W. DONALDSON, D.D.

8vo. 16s.

This Enlarged Edition has been prepared with the intention of placing within the reach of Students at the Universities, and in the Highest Classes at Schools, a Manual of Instruction and Reference which, without exceeding the limits of the most popular Works of the kind, would exhibit a more exact and philosophical arrangement of the materials than any similar book; would connect itself more immediately with the researches of Comparative Philologists; and would contain the sort of information which the Author's long experience as a Teacher and Examiner has indicated to him as most likely to meet the actual wants of those who are engaged in the critical study of the best Greek authors.

Without being formally based on any German Work, it has been written with constant reference to the latest and most esteemed of Greek Grammars used on the Continent.

VARRONIANUS:

A CRITICAL AND HISTORICAL INTRODUCTION TO THE PHILOLOGICAL STUDY OF THE LATIN LANGUAGE.

THIRD EDITION, considerably enlarged.

By J. W. DONALDSON, D.D.

8vo. 16s.

Independently of the original matter which will be found in almost every page, it is believed that this book presents a collection of known facts respecting the old languages of Italy which will be found in no single work, whether British or foreign, and which must be gleaned from a considerable number of rare and expensive publications; and while the lists of Oscan and Etruscan glosses, and the reprints of fragments and inscriptions, may render the treatise an indispensable addition to the dictionary, and a convenient manual for the professed student of Latin, it is hoped that the classical traveller in Italy will find the information amassed and arranged in these pages, sufficient to spare him the trouble of carrying with him a voluminous library of reference in regard to the subjects of which it treats.

ARUNDINES CAMI. Sive Musarum

Canabrigiensium Lusui Canori. Collecti atque Ed. H. DEURY, A.M. A New and cheaper Edition (the Fifth), revised and corrected. Crown 8vo. 7s. 6d.

Now in course of publication, uniformly printed in Fcap. 8vo.

CAMBRIDGE SCHOOL and COLLEGE TEXT BOOKS.

A Series of Elementary Treatises adapted for the Use of Students in the Universities, Schools and Candidates for the Public Examinations.

The study of Mathematics and Science being now generally introduced into our Public Schools and Colleges, and still further extended by the various Public Examinations, the Publishers have been induced to undertake a series of cheap Text-Books specially adapted to the wants of those classes.

In order to secure a general harmony in the treatment, these Works will be edited by members of the University of Cambridge, and the methods and processes employed in University teaching will be followed.

Principles will be carefully explained, clearness and simplicity will be aimed at, and an endeavour will be made to avoid the extreme brevity which has so frequently made the Cambridge treatises too difficult to be used by those who have not the advantage of a private tutor. Copious examples will be added.

Now ready,

ELEMENTARY STATICS. By the Rev. HARVEY GOODWIN, D.D., Dean of Ely. 2s. 6d. sewed; 3s. cloth.

ELEMENTARY DYNAMICS. By the Rev. HARVEY GOODWIN, D.D., Dean of Ely. 2s. 6d. sewed; 3s. cloth.

The following Volumes are already in progress,

ELEMENTARY ALGEBRA. By the Rev. A. WRIGLEY, M.A., Assistant Professor of Mathematics at Addiscombe.

ELEMENTARY ARITHMETIC. By the Rev. A. WRIGLEY, M.A.

ELEMENTARY ASTRONOMY. By the Rev. R. MAIN, M.A., Radcliffe Observer.

ELEMENTARY CHEMISTRY. By G. D. LIVING, M.A., late Fellow of St. John's College.

ELEMENTARY GEOMETRICAL CONIC SECTIONS. By W. H. BESANT, M.A., late Fellow of St. John's College.

ELEMENTARY HYDROSTATICS. By W. H. BESANT, M.A., late Fellow of St. John's College.

ELEMENTARY TRIGONOMETRY. By T. P. HUDSON, M.A., Fellow of Trinity College.

CAMBRIDGE GREEK AND LATIN TEXTS.

Carefully reprinted from the Best Editions.

This Series is intended to supply, for the use of Schools and Students, cheap and accurate editions of the Classics, which shall be superior in mechanical execution to the small German editions now current in this country, and more convenient in form. The Texts of the 'Bibliotheca Classica' and Grammar-School Classics, so far as they have been published, will be adopted. These editions have taken their place among scholars as valuable contributions to the classical literature of this country, and are admitted to be good examples of the judicious and practical nature of English scholarship; and as the Editors have formed their texts from a careful examination of the best editions extant, it is believed that no texts better for general use can be found. The volumes will be well printed at the Cambridge University Press, in 12mo. size, and will be issued at short intervals, neatly bound in cloth.

NOVUM TESTAMENTUM GRÆCUM,

Textus Stephanici, 1550. Accedunt variae lectiones editionum Bezae, Elzevirii, Lachmanni, Tischendorfii, et Tregellesii. Curante F. H. SCRIVENER, A.M. 4s. 6d.

NOTES AND QUERIES:

A MEDIUM OF INTER-COMMUNICATION FOR

LITERARY MEN, ARTISTS, ANTIQUARIES,
GENEALOGISTS, &c.

NOTES AND QUERIES, which is now to be found
in the Library of nearly every Club, College, and Literary Insti-
tution, and in the hands of nearly every book-loving man, in the
United Kingdom, was established for the purpose of furnishing to
all lovers of Literature a COMMONPLACE-BOOK, in which
they might, on the one hand, record for their own use and the
use of others those minute facts,—those elucidations of a doubtful
phrase, or disputed passage,—those illustrations of an obsolete
custom,—those scattered biographical anecdotes, or unrecorded
dates,—which all who read occasionally stumble upon;—and, on
the other, of supplying a medium through which they might ad-
dress those Queries, by which the best informed are sometimes
arrested in the midst of their labours, in the hope of receiving
solutions of them from some of their brethren.

NOTES AND QUERIES contains every Week a variety of
amusing Articles on some of the following Subjects:—

ENGLISH, IRISH, and SCOTTISH HISTORY.

Illustrated by Original Communications and Inedited Docu-
ments.

BIOGRAPHY.

Including Unpublished Correspondence of Eminent Men, and
Unrecorded Facts connected with them.

BIBLIOGRAPHY.

More especially of English Authors, with Notices of Rare and
Unknown Editions of their Works, and Notes on Authorship
of Anonymous Books.

POPULAR ANTIQUITIES and FOLK-LORE,

Preserving the fast-fading Relics of the Old Mythologies.

BALLADS and OLD POETRY,

With Historical and Philological Illustrations.

POPULAR and PROVERBIAL SAYINGS,

Their Origin, Meaning, and Application.

PHILOLOGY.

Including Local Dialects, Archaisms, and Notes on our Old
Poets.

GENEALOGY and HERALDRY.

Including Histories of Old Families, Completion of Pedi-
grees, &c.

MISCELLANEOUS NOTES, QUERIES, and REPLIES,

On Points of Ecclesiastical History, Topography, Fine
Arts, Natural History, MISCELLANEOUS ANTIQUITIES, NU-
MISMATICS, PHOTOGRAPHY, &c.

The Subscription for STAMPED COPIES for Six Months, for-
warded direct from the Publishers (including the Half-yearly
INDEX), is 11s. 4d., which may be paid by Post-Office Order, pay-
able to Messrs. BELL & DALDY, 186, Fleet-street, E.C.

NOTES AND QUERIES may be procured by order of every
Bookseller or Newsmen, or of the Publishers,

BELL & DALDY, 186, Fleet-street, E.C.

IN THE CORNHILL MAGAZINE.

"Mr. Trollope appears with a new story, in which he seems to have tapped a new vein."—*Spectator*.
"Mr. Trollope, we are glad to see, commences a new tale, the opening chapters of which are interesting from their quaintness."—*English Churchman*.

SMITH, ELDER & Co. 65, Cornhill.

In course of publication,

AGNES OF SORRENTO.

IN THE CORNHILL MAGAZINE.

"In England the pen of Mrs. Harriet Beecher Stowe will, we trust, ever find and deserve a welcome. She fixes the colours of the external earth with the firm and faithful hand of a severe and keen-eyed observer. . . . 'Agnes of Sorrento' is a sweet prose poem, an uninterrupted burst of beauty, organic and inanimate. There is not one ill-chosen word, not an incongruous or uncouth thought, from beginning to end."—*Weekly Dispatch*.

SMITH, ELDER & Co. 65, Cornhill.

THE CORNHILL MAGAZINE.

Three Volumes of this popular and interesting Miscellany, each Volume containing 768 pages of Letter-press, consisting of Stories, Essays and Papers on various subjects, by Writers of Eminence, with Twelve Illustrations, besides numerous Vignettes and Diagrams, are now published, price 7s. 6d. each, in ornamental cloth binding.

SECOND EDITION OF THE SILVER CORD.

This day is published, in 3 vols. post 8vo. price 31s. 6d.

THE SILVER CORD.

By SHIRLEY BROOKS,

Author of 'The Gordian Knot,' 'Aspen Court,' &c.

"If to create excitement from the first chapter to the last be the great object in writing a novel, Mr. Shirley Brooks has achieved a most remarkable success,—for a more exciting story than 'The Silver Cord' was, perhaps, never written."—*Examiner*.

"There is a wealth of materials in it that is quite surprising. Almost every chapter has its own striking situation allotted to it; and we are constantly kept on the alert, watching for something even more startling than all that has gone before."—*Saturday Review*.

On the 30th inst. will be published, price 10s. 6d. in cloth, gilt edges, THE DOUBLE VOLUME FOR 1845 (Vols. 8 and 9) of

THE RE-ISSUE OF PUNCH.

Also, the Ninth Volume, in boards, price 5s.

The following are already published:—

Vol. 1 (for 1841)..... 6s.	Vol. 4 and 5 (1843) 10s. 6d.
Vol. 2 and 3 (1842) 10s. 6d.	Vol. 6 and 7 (1844) 10s. 6d.

* Any Volume or Double Volume may always be had separately.

BRADBURY & EVANS, 11, Bouverie-street, E.C.

MR. READE'S NEW WORK.—SECOND EDITION.

John Murray, Albemarle-street.

THE MISSIONARY IN MADAGASCAR.

Fourth Thousand, with Map and Illustrations, 8vo. 16s.

THREE VISITS TO MADAGASCAR, in 1833-56, including a Journey to the Capital, with Notices of the Natural History, and of the Present Civilization of the People. By Rev. W. ELLIS, Author of 'Polynesian Researches.'

"In the revived interest attaching to Madagascar by the important changes that have taken place in that island, we should urge those who have not read the Rev. Wm. Ellis's most interesting volume to turn to it at once, for the sake of making themselves acquainted with the history of civilisation and Christianity there."—*Patriot*.

"What Dr. Livingstone has done for Central Africa, Mr. Ellis has accomplished for Madagascar. He has brought to light the interior of an unknown region, and laid open a new field of vast importance for European and Transatlantic enterprise. That Madagascar will very soon be accessible to our trade and commerce, it is impossible to doubt, after the recent instances of China and Japan."—*Christian Observer*.

John Murray, Albemarle-street.

Right Hon. Lord Tredegar.

John Charles Burgoyne, Esq.
Lord George Henry Cavendish, M.P.
Frederick Cowper, Esq.
Richard Gosling, Esq.
Peter Martineau, Esq.

THE EQUITABLE is an entirely MUTUAL Office. The reserve, at the last "rest," in December, 1859, exceeded three-fourths of a million sterling, a sum MORE THAN DOUBLE the corresponding fund of any similar Institution.

The Bonuses paid on Claims in the Ten Years ending on the 31st December, 1859, exceeded **Three Millions and a Half**, being more than 100 per Cent. on the amount of all those Claims.

The amount added at the close of that decade to the Policies existing on the 1st January, 1860, was **£1,977,000**, and made, with former additions then outstanding, a total of **£4,070,000**, on Assurances originally taken out for **£6,252,000** only.

These additions have increased the Claims allowed and paid under those policies since the 1st January, 1860, to the extent of 150 per Cent.

The Capital at this time consists of

£2,730,000—Stock in the Public Funds.

£3,006,297—Cash lent on Mortgages of Freehold Estates.

£300,000—Cash advanced on Railway Debentures.

£83,590—Cash advanced on security of the Policies of Members of the Society.

Producing annually, **£221,482**.

The total Income exceeds **£400,000** per Annum.

POLICIES effected in the current year (1861) will participate in the distribution of Profits made in December, 1859, so soon as Six Annual Premiums shall have become due and been paid thereon; and, in the Division of 1869, will be entitled to additions in respect of every Premium paid upon them from the year 1862 to 1869, each inclusive.

On the surrender of Policies, the full value is paid, *without any deduction*; and the Directors will advance *nine-tenths* of that value as a temporary accommodation, on the deposit of a Policy.

No extra Premium is charged for service in any Volunteer Corps within the United Kingdom, during peace or war.

A Weekly Court of Directors is held every Wednesday, from 11 to 1 o'clock, to receive Proposals for New Assurances; and a Short Account of the Society may be had on application personally, or by post, from the Office, where attendance is given daily, from Ten to Four o'clock.

LONDON LIFE ASSOCIATION, 21, KING WILLIAM-STREET, E.C.

Instituted 1806.

President—CHARLES FRANKS, Esq.

Vice-President—JOHN BENJAMIN HEATH, Esq.

Trustees.

Francis Henry Mitchell, Esq.

Robert Hanbury, Esq.

Alfred Head, Esq.

Bonamy Dobree, Esq.

The London Life Association was established more than fifty years ago, on the principle of Mutual Assurance, the whole of the benefits being shared by the Members assured. The surplus is ascertained each year, and appropriated solely to a reduction of the premiums after seven years' payments have been made.

If the present rate of reduction be maintained, persons now effecting Assurances will be entitled, after seven years, to a reduction of 73½ per cent., whereby each lxd. of annual premium will be reduced to 2l. 18s.

This Society has paid in claims more than..... £4,150,000
And has policies now in force amounting to..... 6,450,000

For the payment of which it possesses a capital exceeding..... 2,750,000
And a gross income from premiums and interest of..... 340,000

Assurances may be effected for any sum not exceeding 10,000l. on the same life.

The Society has no agents and allows no commission, nevertheless the new assurances effected in the last financial year amounted to 257,240l., and the new annual premiums to 10,567l.

SPECIAL BONUS NOTICE.

THIRD SEPTENNIAL INVESTIGATION AND DIVISION OF PROFITS to 1st JULY, 1861.

The Cash Bonus varies from 21l. 6s. 8d. to 32l. 6s. 8d. per cent. on the Premiums paid in the last seven years on Policies of 7, 14 and 21 years' duration.

The equivalent Addition to each Policy ranges from 28l. 10s. to 50l. 12s. 4d. per cent. of such Premiums: or from 19s. to 21. 7s. per cent. per annum on the Sum assured.

J. H. DALLMEYER (Son-in-Law and Pupil of the late ANDREW ROSS)
Respectfully begs to inform the Scientific Public that he exclusively manufactures the ASTRONOMICAL TELESCOPE according to A. R.'s processes, who has also bequeathed to him the whole of that faculty.

For particulars of J. H. D.'s recent IMPROVEMENTS in MICROSCOPIC OBJECT-GLASSES, PHOTOGRAPHIC LENSES, &c. see Catalogue, which may be had on application at 19, BLOOMSBURY-STREET, Oxford-street, W.C.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY.—NOTICE OF REMOVAL.

NOTICE IS HEREBY GIVEN, that the BUSINESS of the above SOCIETY has been REMOVED from No. 14, WATERLOO-place to their new and more eligible premises, No. 101, CHEAP-side, E.C. G. L. LAWSON, Secretary.

THE MUTUAL LIFE ASSURANCE SOCIETY (A.D. 1834).

39, KING-STREET, Cheapside, E.C., London.
Capital, from Premiums only, 385,000l.
Income, 70,000l. Assurances, 1,600,000l.
Bonuses average 2½ per cent. per annum on sum assured.
Profits divided yearly and begin on second Premium.
Twenty-seventh Annual Report and Accounts may be had.
CHARLES INGALL, Actuary.

METROPOLITAN LIFE ASSURANCE SOCIETY.

No. 3, PRINCES-STREET, BANK, E.C. Established 1833.
Advantages of assuring with this Society:—
Economical management, no paid agents, and no commission allowed.
The whole of the profits applied to the reduction of the premiums of members.
The guarantee of an accumulated fund exceeding 925,000l.
A gross annual income of 148,000l.
Amount paid in claims without a single instance of dispute, 600,000l.
Returned to members in reduction of their premiums, 600,000l.
HENRY MARSHALL, Actuary.

The POLICIES of

THE STANDARD LIFE ASSURANCE COMPANY

are more valuable than ordinary Policies,

inasmuch as they are free from extra Premiums in the case of Foreign residence, when the Directors are satisfied there is no intention or prospect on the part of the Assured to reside abroad. They are also free from other restrictive clauses. These are great benefits. Take, as an example, a life-renter who insures his life. In ordinary Policy he is limited to residence in Europe, and his Policy is subject to forfeiture on various grounds. A STANDARD Free Policy once obtained contains but one condition—payment of the Premium, and for that, too, increased facilities are given; while, at the end of five years, the Assurance Deed becomes—as regards any question—a simple promise to pay on proof of death. If the Policy is to be made the basis of a marriage contract, or to be a security in any way, the advantage of a Free Assurance is undeniable; and, in the present day, every Policy, it may be said, becomes in the course of its existence, in some way or other, the groundwork of a responsible transaction.

The BUSINESS of

THE STANDARD LIFE ASSURANCE COMPANY

has been most successful since its
Establishment in 1825.

Progress during 1860.

Sums proposed for Assurance during the year 1860 \$807,747
Policies accepted and taken up 785,987
Annual Income was at 15th November, 1860 804,161
Accumulated Fund 1,856,803

SPECIAL NOTICE.

Advantage of Assuring before 15th November, 1861.

A Policy effected before 15th November next will not only participate in the 7th Division of Profits to be made in 1865, but will secure one year's additional Bonus at all future Divisions over Policies of later date.

Profits of the Company

have been divided on six occasions, in 1825, 1840, 1845, 1850, 1855, and 1860, when large additions were made to Policies under the peculiar mode of Division adopted by the Company, which is essentially Tontine, affording very important advantages to Assurers.

Examples of Bonus Additions.

Date of Policy.	Sums in Policies.	Bonus Additions to 1860.	Sums in Policies, with Bonus Additions.
Nov. 15, 1830	£. 1000	£. s. d. 1115 0 0	£. s. d. 2115 0 0
" 1835	1000	790 0 0	1790 0 0
" 1840	1000	515 0 0	1515 0 0
" 1845	1000	368 10 0	1368 10 0
" 1850	1000	152 10 0	1152 10 0
" 1855	1000	74 0 0	1074 0 0

Next Division in 1865, and every Five Years afterwards.

WILL. THOS. THOMSON, Manager.

H. JONES WILLIAMS, Resident Secretary.

LONDON—23, King William-street, E.C.

EDINBURGH—3, George-street (Head Office).

DUBLIN—64, Upper Sackville-street.

The Medical Officer attends at the London Office daily at Half-past One.

ACCIDENTS OF ALL KINDS,

AND FROM ANY CAUSE, may be provided against by an Assurance to the amount of £2. to the RAILWAY PASSENGERS' ASSURANCE COMPANY, which secures 1,000l. at death by Accident, or 6l. weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS.
ONE PERSON in every TWELVE insured is injured yearly by ACCIDENT.

75,000l. has been already PAID as COMPENSATION.

For further information apply to the Provincial Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 2, Old Broad-street).

ANNUAL INCOME, 40,000l.
CAPITAL, ONE MILLION.
WILLIAM J. VIAN, Secretary.
64, Cornhill, E.C., January, 1861.

NORTH BRITISH LIFE ASSURANCE COMPANY.

Head Office—64, Princes-street, Edinburgh.
London Office—4, New Bank-buildings, Lothbury.

LIFE DEPARTMENT.

Policies opened before 21st December will be entitled at next Distribution of Profits in 1865 to rank for five years' bonus.

PROGRESS OF BUSINESS.

Policies.	Sums Assured.
For five years, from 1838 to 1857 inclusive, the annual average was	207 537,948
In 1856, the Policies issued	455 377,425
1859	605 449,913
1860	741 475,649

This increase in the business of the Company will, it is expected, beneficially affect the Bonus to be declared at next Division of Profits.
New and liberal conditions of Assurance have recently been adopted, particulars of which, together with Prospectuses and all necessary information, may be had as above, or will be forwarded on application to ROBERT STRACHAN, Secretary, 4, New Bank-buildings, October, 1861.

obtained from all Sauce Vendors, and wholesale of

CROSBY & BLACKWELL, Purveyors to the Queen,

Soho-square, London.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is the

most effective invention in the curative treatment of HERNIA.

The use of a steel spring, so often hurtful in its effects, is here

avoided: a soft bandage being worn round the body, while the

requisite resisting power is supplied by the MOC-MAIN PAD and

PATENT LEVER, fitting with so much ease and closeness that

it cannot be detected, and may be worn during sleep. A descrip-

tive Circular may be had, and the Truss (which cannot fail to fit)

forwarded by post, on the circumference of the body, two inches

below the hips, being sent to the Manufacturer.

Price of a Single Truss, 10s. 6s. 4s. 3s. 2s. 1s. 6d.; postage, 1s.

" Double Truss, 21s. 6s. 12s. 6s. 4s. 3s. 2s. 1s. 6d.; postage, 1s. 6d.

P. O. O. made payable to JOHN WATTS, Post-office, Piccadilly.

ELASTIC STOCKINGS, KNEE-CAPS, &c.

for VARICOSE VEINS, and all cases of WEAKNESS

and SWELLING of the LEGS, SPRAINS, &c. They are porous,

light in texture, and inexpensive, and are drawn on like an ordi-

nary stocking. Price 4s. 6d., 7s. 6d., 10s. and 12s. each, postage 6d.

JOHN WHITE, Manufacturer, 238, PICCADILLY, London.

ELKINGTON & CO. desire respectfully to call the attention of the Nobility and Gentry requiring PLATE, to their new and improved variety, both in SILVER and ELECTRO PLATE, from either of their Establishments:—

TEA.—DR. HASSALL'S ("The Chief Analyst of the Sanitary Commission of the Lancet on Food") Report on the Teas and Coffees sold by Messrs. STRACHAN & CO. 26, Cornhill, London, E.C.—Having purchased through my own agents, and in the ordinary way of business, a variety of samples of the several qualities of Tea and Coffee vended by Messrs. Strachan & Co., I have subjected the whole of them to Microscopical Examination and Chemical Analysis. The result of the examinations obtained was in the highest degree satisfactory. A full Report of the above analysis, also List of Prices, can be had on application to Messrs. Strachan & Co. 26, Cornhill, E.C. London. Carts to all parts of London daily.

A MOST DESIRABLE BREAKFAST BEVERAGE.

EPPS'S COCOA (commonly called Epps's Homoeopathic Cocoa).

The delicious aroma, grateful smoothness, and invigorating power of this preparation, have procured its general adoption as a most desirable breakfast beverage. Each packet is labelled "James Epps's Homoeopathic Cocoa, London." 1 lb. 1 lb., and 1 lb. Packets, at 1s. 6d. per lb., by Grocers everywhere.

SAUCE.—LEA AND PERRINS beg to caution the Public against Spurious Imitations of their world-renowned WORCESTERSHIRE SAUCE.

ASK FOR LEA AND PERRINS' SAUCE, Pronounced by Connoisseurs to be "THE ONLY GOOD SAUCE."

Sold Wholesale and for Export, by the Proprietors, Worcester; Messrs. CRABBE & BLACKWELL, London, &c. &c.; and by Grocers and Oilmen universally.

DR. DE JONGHE'S (Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, Prescribed by the most Eminent Medical Men throughout the world, as the safest, speediest and most effectual

remedy for CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS. Is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., Physician to the British Embassy at Paris.—"I have frequently prescribed Dr. de Jonghe's Light-Brown Cod Liver Oil, and have every reason to be satisfied with its beneficial and salutary effects."

Sir HENRY MARSH, Bart. M.D., Physician in Ordinary to the Queen in Ireland.—"I consider Dr. de Jonghe's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LAWRENCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.—"I invariably prescribe Dr. de Jonghe's Oil in reference to any other, feeling assured that I am recommending a genuine article, and a manufactured compound, in which the efficacy of this invaluable medicine is destroyed."

Dr. LANKESTER, F.R.S., Superintendent of the Food Collection, South Kensington Museum.—"I consider the Cod Liver Oil sold under Dr. de Jonghe's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

DR. DE JONGHE'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-Pint, 2s. 6d.; Pints, 4s. 6d.; Quarts, 6s.; and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE COGNISSEES: ANSAR, HARFORD & CO. 77, Strand, London, W.C.

CAUTION.—Beware of proposed Substitutions.

COCKLE'S ANTIBILIOUS PILLS for Indigestion, bile, sick headache, acidity, heartburn, flatulency, spasms, &c.—Prepared only by JAMES COCKLE, 18, New Ormond-street; and to be had of all Medicine Vendors, in boxes, at 1s. 1d., 2s. 6d., 4s. 6d. and 11s. each.

GLASS for ORCHARD HOUSES, as supplied by us to Mr. RIVAZ.

Packed in boxes of 100 feet each.

30 in. by 15 in. } Common 16 0
" " " " } Superior ditto 18 0
" " " " } English Glass 18 0

The above prices include the boxes. Every description of Glass for Dwelling Houses, Greenhouses, Cucumber Frames, &c. JAMES PHILLIPS & CO., Glass Merchants, 180, BISHOPSGATE-STREET WITHOUT, LONDON.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in mastication.—At home from Ten till Five.

E. LAZENBY & SON respectfully announce to their customers the arrival of this Season's FOREIGN PRESERVED FRUITS—Apples, Greenapples, Peas, Strawberries, and other kinds, Crystallized and Glazed, Dried Cherries, Almonds, Muscatel Raisins, Figs, French and Swiss Plums, Nectarine Pippins, Valencia and Sultan's Raisins, Currants, &c. They also take the opportunity of recommending to notice their Sauces, Pickles, Jams, Tart Fruits, Tea, Coffee, Sugars, Spices, Soaps, Colza and other Oils, Candles, and General Groceries, all of which will be found of superior quality.

4, EDWARDS-STREET, PORTMAN-SQUARE, LONDON, W.

THE FAIRY BOUQUET.—Dedicated (by Special Permission) to the QUEEN of the FAIRIES. It is made from Wild Flowers, called by Fairy hands from the bank beneath the wild thyme grows. The authenticity of the receipt is vouched for with the same degree of certainty as is the existence of Titania herself. In bottles, 2s., 3s. 6d. and 5s. each.

METCALFE, BINGLEY & CO.'S NEW PATTERNT TOOTH BRUSHES, Penetrating Hair Brushes, Genuine Smyrna Sponges, and every description of Brush, Comb, and Perfumery. Metcalfe's celebrated Alkaline Tooth Powder, 2s. per box.—128 and 131, Oxford-street.

REFRESHING BALM for the HAIR.—Every one values and admires a beautiful head of hair; yet there are hundreds who desire to make their hair look well, keep it from turning grey and falling off, but are unacquainted with the means to do so. OLDIDGE'S BALM OF COLUMBIA to them is a priceless treasure—it is the only certain remedy, established upwards of 30 years, it has withstood every opposition and imitation, and by the increasing demand proves its true value. In producing whiteners or mousses, aiding weak thin hair to become strong, it has no equal. Price 3s. 6d., 6s., and 11s. only.—Sold Wholesale and Retail by C. Oldidge, 22, Wellington-street (seven doors from the Strand), W.C.

IMPROVEMENT OF THE VOICE by DR. LOOCK'S PULMONIC WAFFERS.—From the Rev. Morgan James, Rhymey Iron Works, Aberystwyth:—"Sir, I have tried one box of Dr. LOOCK'S PULMONIC WAFFERS for my voice, and received great benefit from them."

Dr. Loock's Wafters give instant relief and a rapid cure of Asthma, Consumption, Coughs, and all Disorders of the Breath and Lungs. Price 1s. 1d., 2s. 6d., and 11s. per box. They have a pleasant taste. Sold by all Medicine Vendors. Beware of counterfeits.

ALL FOREIGN MEDICINES, Medicinal Plants, Chemicals, &c. may be obtained of AUGUSTUS WHITHURN (late GRIGORI), Foreign Chemist, 174, REGENT-STREET, opposite Burlington-street. Preparations of the United States; French, Italian and German Pharmacopoeias.—West-End Agent for Mr. Jeffrey's Respirators.

STOVES for ENTRANCE HALLS, SCHOOL ROOMS, CHURCHES, &c. all made with fire-brick linings, and entirely free from the objections found to so many, which, from their liability to become overheated, are dangerous, and render the atmosphere offensive. These Stoves burn little fuel, may be had with or without open fire, and to burn throughout the season, if required, without giving out. Illustrated Prospectus forwarded. FREDERICK EDWARDS & SON, General Store and Kitchen Range Manufacturers, 49, GREAT MARLBOROUGH-STREET, W. For 30 years in Poland-street, adjoining.

DINNEFORD'S PURE FLUID MAGNESIA has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the best Remedy for acidity of the stomach, heartburn, headache, gout and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable effervescent Draught, in which its Aperient qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by DINNEFORD & Co. 173, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

HENRY'S CALCINED MAGNESIA continues to be prepared, with the most scrupulous care and attention, by Messrs. THOS. & WM. HENRY, Manufacturing Chemists, Manchester. It is sold, in bottles, price 3s. 6d., or with glass stoppers at 4s. 6d., stamps included, with full directions for its use, by their various Agents in the Metropolis and throughout the United Kingdom; but it cannot be genuine unless the name is engraved on the Government Stamp which is fixed over the cork or stopper of each bottle. Sold in London, wholesale, by Messrs. Barclay & Sons, Farringdon-street; Sutton & Co., Bow Church-yard; Newbery & Sons; E. Edwards; Thos. Butler, St. Paul's Church-yard; Savory & Co., New Bond-street; Sangar, 81, Old-street. And of most of the vendors of the Magnesia may be had, authenticated by a similar stamp, HENRY'S AROMATIC SPIRIT OF VINEGAR, the invention of Mr. Henry, and the only genuine preparation of that article.

FOR WEAKNESS, INFLAMMATION and IRRITATION of the EYES, caused by the Winds, Bright, Close Application of Literary and other Professional Occupations, the EYE-DOUCHE or FOUNTAIN, invented by SAVORY & MOORE, for the perfect application of Cold Water, Eye Lotions, &c. The effects produced are grateful and refreshing, and the sight is improved and permanently strengthened. The regular use of the DOUCHE of SAVORY & MOORE, Chemists to the Queen, 143, NEW BOND-STREET, LONDON, N.W. as the indication of these Douches causes congestion of the Vessels of the Eye, it is important to observe that the names of SAVORY & MOORE are conspicuous on all instruments of their manufacture.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1775.

LONDON, SATURDAY, NOVEMBER 2, 1861.

PRICE
THREEPENCE
Stamped Edition, 4d.

NOTICE.

The price of THE ATHENÆUM from October 5 is THREEPENCE.

Thirty years ago, when THE ATHENÆUM came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price, and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing the size of the paper without increase of price, until the average has become about sixty columns of literary matter, with forty columns of advertisements, selected so as to be of general interest.

The Proprietors, taking advantage of the abolition of the Paper Duty, therefore resolved that the price of THE ATHENÆUM should from October 5 be THREEPENCE.

UNIVERSITY COLLEGE, LONDON.—The PROFESSOR OF ENGLISH LAW, JOHN A. RUSSELL, LL.B., Barrister-at-Law, will Lecture during the months of November, December, and January, on TUESDAY EVENINGS, at 7½ o'clock, commencing on TUESDAY, the 6th of November. Subject, THE PRINCIPLES OF MERCANTILE LAW. Payment for the Course, 4l. 4s. On payment of 5s. College Fee in addition, the Course is open to Gentlemen who are not attending other Classes in the College. A Prize of 10l. offered by Laurence Counsel, Esq., will be at the disposal of the Professor for presentation at the end of the Session to the most proficient Student of this Class, if he consider the proficiency deserving of such a reward: if not the prize will be reserved for a future Session. EDWARD S. BEESLY, A.M. Dean of the Faculty of Arts and Law. CHAS. C. ATKINSON, Secretary to the Council.

UNIVERSITY COLLEGE, LONDON.—LECTURES ON POLITICAL ECONOMY, by Prof. WALEY, A.M., Fellow of the College. A Course of about Twenty Lectures, commencing on TUESDAY, November 6th. Subjects:—Production and Distribution of Wealth, including Principles of Population and Theories of Wages, Profits and Rent—Theory of Value—Money, Credit, including Principles of Banking and Exchanges, Currency, Foreign Trade, Taxation, Public Debts. Lectures on Tuesday, from 5.30 to 6.30. Fee 2l. On payment of 5s. College Fee, in addition, the Course is open to gentlemen who are not attending other classes in the College. A Joseph Hume Scholarship in Political Economy of 20l. a year for Students matriculated in the College, tenable for three years, will be awarded in December, 1862. In the Further Examination of selected candidates for the Civil Service of India, Political Economy is one of the subjects. 500 marks may be obtained for it. Masters of unendowed schools and ushers entered to the four Evening Classes of Latin, Greek, Mathematics, and Natural Philosophy, will be admitted to the Lectures gratuitously. The regulations concerning the Scholarships may be had on application at the office. EDWARD SPENSER BEESLY, A.M. Dean of the Faculty of Arts and Law. CHARLES ATKINSON, Secretary to the Council.

ROYAL COLLEGE OF SURGEONS OF ENGLAND.—THE OFFICE OF CONSERVATOR of the MUSEUM of the COLLEGE having become VACANT by the decease of Mr. QUEKETT, the Council request that CANDIDATES for the Appointment will transmit a statement of their professional qualifications, addressed to the Secretary at the College, on or before the 30th of November next. Particulars relating to the Appointment may be obtained upon application at the College. October 24, 1861. EDMUND BELFOUR, Secretary.

ROYAL GEOGRAPHICAL SOCIETY.—THE OPENING MEETING will be held on MONDAY, November 11, at Burlington House, Piccadilly. Chair taken at 5.30 p.m.

UNIVERSITY OF ST. ANDREWS.—NOTICE IS HEREBY GIVEN, that the next EXAMINATION for the DEGREE of DOCTOR of MEDICINE will COMMENCE on FRIDAY, the 27th of December. Fellows and Members of the Royal College of Surgeons of England, Edinburgh, and Dublin, of the Faculty of Physicians and Surgeons of Glasgow, and Licentiates of the London Apothecaries' Company, are eligible for Examination. Every Candidate is required to communicate by letter with Dr. DAV, the Professor of Medicine, fourteen days before the period of Examination, and to present himself to the Secretary for Registration, on or before Thursday, the 29th of December. By order of the Senate Academicus. JAMES M'BEAN, M.A., Sec. St. Andrews, Nov. 1, 1861.

UNIVERSITY OF EDINBURGH.—CHEMICAL LABORATORY. The LABORATORY will be opened for the Winter Season on MONDAY, 4th of November. The instruction is under the immediate superintendence of the Professor of Chemistry, Dr. LYON PLAYFAIR, C.B., assisted by Mr. DITTMAR and Mr. WANKLYN, F.R.S.E. The LECTURES commence on TUESDAY, 6th of November. THE HOPE PRIZE, of 50l. in value, is open for competition to Laboratory Students.

EVENING LECTURES to WORKING MEN.—GOVERNMENT SCHOOL OF MINES, Jermyn-street. The FIRST COURSE, consisting of SIX LECTURES 'On the Metallurgy of Copper and Zinc,' by Dr. PERCY, F.R.S., will be commenced on MONDAY, the 11th of November, at 8 o'clock. Tickets may be obtained, by Working Men only, on Monday, the 4th inst., from 10 to 4 o'clock, upon payment of a Fee of 6d. for the whole Course. Each Applicant is requested to bring his name, address, and occupation, written on a piece of paper, for which the ticket will be exchanged. TRENHAM REEKS, Registrar.

FRUIT AND CHRYSANTHEMUMS, ROYAL HORTICULTURAL SOCIETY'S SHOW at SOUTH KENSINGTON, WEDNESDAY and THURSDAY NEXT, November 6th and 7th. OPEN at ONE o'clock. Band of First Life Guards at Two o'clock. Tickets on November 6th, 3s. 6d.; if purchased before that day, HALF-A-CROWN: November 7th, ONE SHILLING. At the entrance of the principal Librarians and Music-sellers. Next Election of Fellows, November 4th.

PHOTOGRAPHIC SOCIETY.—The First Meeting of the Session, will take place at KING'S COLLEGE, on TUESDAY EVENING, the 6th of November, at Eight o'clock. A Paper will be read by T. A. MALONE, Esq., Director of the Chemical and Photographic Laboratories of the London Institution. 'On some Experiments and Observations in Relation to the Nature and Toning of the Photographic Image.' HUGH W. DIAMOND, Secretary.

POLYTECHNIC INSTITUTION.—Professor J. H. PEPPER, F.R.S., Lect. C.E., continues to accept ENGAGEMENTS to LECTURE at Institutions, Colleges and Schools; and his CHEMICAL LABORATORY for Analyses, Private Pupils. Instruction in the Scientific Portion of the Civil Service and Military Examinations, and for Morning and Evening Classes, is at the Polytechnic, 309, Regent-street.—N.B. The Laboratory is carefully fitted with every necessary Apparatus.

THE WIFE of a PHYSICIAN, highly connected, and well known in the literary world, is desirous of RECEIVING SIX PUPILS, from Six to Sixteen years of age, to Educate with her own Daughters, at her residence near Kensington Gardens, near Christ Church, near Terms, 1s. per annum. Address, by letter, post paid, to M.D. care of H. & C. TREACHER, Booksellers, &c., 1, North-street, Brighton.

QUEKETT MEMORIAL FUND.—It is proposed to raise a sum of money, to be invested in the hands of Trustees, for the BENEFIT of the FOUR SONS of the late Prof. QUEKETT, F.R.S., when their school education is complete.—Working Committee:—Prof. Owen, F.R.S., The Hon. and Rev. Lord S. G. Osborne, Dr. Benze Jones, F.R.S., Prof. George Busk, F.R.S., Frank Buckland, Esq., M.A., M.R.C.S., Dr. Lionel S. Beale, F.R.S., Hon. Sec. King's College, London. Bankers, Messrs. Twining, Strand.

HONESTY—POVERTY—TOTAL BLINDNESS. MR. WILLIAM KIDD will "GOSSIP" again on TUESDAY EVENING NEXT, Nov. 5, at THE QUEEN'S COLLEGE, TURNELL PARK WEST. Begin at 8 precisely. Subject:—A LAUGHABLE and VERY PRACTICAL GOSSIP ABOUT BIRDS, BIRD-KEEPING, and DOMESTIC PETS OF ALL KINDS. Mrs. Morel has, in the most handsome manner possible, offered the Grosvenor Hall on this occasion, and the entire proceeds of the Evening's ENTERTAINMENT will be given to Mr. JAMES KNIGHT, a highly respectable and well-known Printer, now totally blind and quite unable to work. Mr. Knight, who has a large family, lives at Crouch End, Hornsey; and his precarious existence depends entirely on the (uncertain) sale of a few Cheap Newspapers and Periodicals. This case meriting more than common sympathy, Mr. Kidd's earnest appeal to his Friends and a generous Public is: "Come over and help us!"—Hammersmith, Nov. 2.

ENGLISH LANGUAGE and LITERATURE. TO LADIES.—Mr. GEORGE MAC DONALD will RECOMMENCE his CLASS for the STUDY of the ENGLISH LANGUAGE and LITERATURE, on FRIDAY, November 15, at 11 o'clock, a.m. The Class will meet every Friday till the end of June, 1862. Terms, Five Guineas, payable in advance. Tudor Lodge, Albert-street, Regent's Park, N.W.

BEDFORD COLLEGE (for LADIES), 47 and 48, Bedford-square. The HALF-TERM begins NOVEMBER 14th. Boarders received within the College. For particulars, apply at the College. JANE MARTINEAU, Hon. Sec.

UNIVERSITY OF LONDON, EAST INDIA CIVIL SERVICE, and other COMPETITIVE EXAMINATIONS.—Mr. PAICE, M.A., London, READS WITH GENTLEMEN preparing for any of these Examinations.—Address Messrs. WALTON & MARELLY, Upper Gower-street.

MR. ROCHE'S EDUCATIONAL INSTITUTIONS FOR YOUNG LADIES. Cadogan-gardens, 28, Somerset-street, Portman-square, and 16, Cleveland-street, Portman-square, will RE-OPEN on the 15th of NOVEMBER, 1861, French, History, Geography and Astronomy, German, Italian, English, Singing, Piano, Drawing and Painting, Dancing.—Applications to be addressed to Mr. A. ROCHE, Cadogan-gardens, S.W.

GERMAN, French, Italian.—9, OLD BOND-STREET.—Dr. ALTSCHUL, Author of 'First German Reading-Book,' dedicated to Her Grace the Duchess of Sutherland, &c. M. Philol. Soc., Prof. Elocution.—TWO LANGUAGES TAUGHT in the same lesson, or alternately, on the same Terms as One, at the pupils or at his home. Each language spoken in his PRIVATE Lessons, and select CLASSES for ladies and Gentlemen. Preparation for all ordinary pursuits of life, the Universities, Army and Civil Service Examinations.

TO PARENTS and GUARDIANS.—A Widow LADY, residing in the immediate neighbourhood of Bedford-square, in an eminently healthy and cheerful situation, is desirous of RECEIVING into her Family a YOUNG LADY, for whom her friends wish to find a comfortable and happy home. In the advertiser's daughter (age 17), who is an excellent musician and of a cheerful temper, she would find an intelligent and desirable companion with whom to prosecute her studies.—Address C. C., 76, Gower-street, Bedford-square.

SUB-EDITOR WANTED for a LEADING DAILY PAPER in Edinburgh.—Salary from 150l. to 180l. Apply, with references, to D. G., 21, London-street, Edinburgh.

THE PRESS.—WANTED, by a respectable YOUNG MAN, a SITUATION as REPORTER, or REPORTER and READER. Can give excellent references as to character and ability. Is a verbatim Reporter, and is well accustomed to all the duties connected with the bringing out of a Paper.—Address DULZA, Belvidere Cottage, Weymouth.

THE PRESS.—The Proprietor of an old-established LIBERAL-CONSERVATIVE JOURNAL wishes to DISPOSE of a HALF, or a LESS SHARE of it, to a party who could take the business management of the concern. Failing in this, he would Sell the Whole. Capital required for a Half, 1,600l.—Apply M. N. O., Street Brothers, 11, Serle-street, Lincoln's Inn-fields.

TO PUBLISHERS and EDITORS.—A Work of Fiction with a HIGHLY ATTRACTIVE TITLE! and some SERIOUS TONE! by the Author of Several Popular Works, TO BE DISPOSED OF.—Address, J. A., Post-Office, 11, Gower-street North, W.C.

TO PUBLISHERS.—A GENTLEMAN of capital is desirous of embarking in the PUBLISHING BUSINESS, either as Partner or by Purchase.—Address, in the first instance, to X.Y.Z., care of Mr. Lindley, 19, Catherine-street, Strand, W.C.

LITERARY PROPERTY.—SHARE in a COPY-RIGHT to BE DISPOSED OF for 500l. sum which at least 400l. a year can be realized.—Address, with real name (in strictest confidence), to B. C. L., Post-Office, Chancery-lane.

WANTED, by an English Gentleman, aged 50, PARTIAL ENGAGEMENT, as English, Italian or French Correspondent, Confidential Secretary, Interpreter, Reader, Translator, Teacher, Clerk, or otherwise. First-rate City and West-end references. Security, &c.—Address, p. p. to Mr. CURT, 33, Great Portland-street, Regent-street.

RAY SOCIETY, (Instituted 1844.) For the PUBLICATION of WORKS on NATURAL HISTORY. Annual Subscription, One Guinea.

The Subscription List for the Volume for 1860.—Dr. Carpenter's 'Introduction to the Study of the Foraminifera' is still open. Gentlemen wishing to join the Society can do so by applying to the Secretary. The present number of Subscribers is little short of 600; but there are, no doubt, many who would gladly contribute their annual guinea to the funds of the Society, were its claims to their attention brought before them. The object of the RAY SOCIETY is the promotion of Natural History, by the printing of Works in Zoology and Botany. New Editions of Works of established merit, rare Tracts and MSS., and Translations and Reprints of Foreign Works, which are generally inaccessible from the language in which they are written, or from the manner in which they have been published. Every Subscriber of One Guinea is entitled to a copy of every book published by the Society during the year to which his subscription relates.

The Volume in hand for 1861, which is now in a forward state, is—Mr. Currey's Translation of Dr. Hofmeister's Work 'On the Higher Cryptogamia.'

Other Works now in preparation are—Dr. Bowerbank's 'Monograph of the British Spionidae.' Mr. Blackwall's 'British Spiders.' Part II. (conclusion). Dr. Günther, 'On the Reptiles of British India.' Mr. Douglas, 'On British Hemiptera Heteroptera.'

Those Volumes already issued to the Subscribers for 1859 and previous years, which are still in stock, are now offered to the public at an increased price, and are sold by Mr. ROBERT HUTTON, 6, Nixon-street, Newcastle-on-Tyne. Many of the earlier Volumes are, however, not now obtainable, being out of print.

H. T. STANTON, Secretary. Mountfield, Lewisham, S.E.

EGYPTIAN DESERT SANITARIUM, for the TREATMENT of PULMONARY and OTHER INVALIDS.

The above Establishment, beautifully situated in the Desert, near Cairo, surrounded by Grounds and Gardens for Exercise, is intended to supply a want long felt by Invalids visiting Egypt, where they may, with the great advantage generally derived from the pure air of the Desert, have regular Medical Attendance, combined with domestic comfort. The domestic arrangements are conducted by the Matron, Mrs. MICHAEL, under the medical and general superintendence of Dr. PATTERSON, the resident English Physician of Cairo. A limited number only can be admitted this season.—Terms: 30 Guineas per Month.

TO LET, at 9, Conduit-street, Regent-street, with use of a Committee Room, the East Gallery of the Suite of Galleries belonging to the Architectural Exhibition, 40 feet by 21 feet, separate entrance from Maddox-street. Rent, including warming and gas, for one evening per week, between 6 and 12 o'clock, all the year round, and attendance, 35d. per annum; occasional use of the whole suite of Galleries may be had engaged at present Monday and Tuesday Evenings. Enquire of MR. MOODY, on the Premises.

The Great Sale of Illustrated and Illuminated Books.

SOUTHGATE & BARRETT will SELL by AUCTION, at their Rooms, 22, Fleet-street, on **MONDAY, November 18,** and five following days (Saturday and Sunday excepted), the **Entire Remaining Copies of Valuable and Choice**

ILLUSTRATED and ILLUMINATED WORKS.

Children's Books and others, adapted for presentation, lotted to suit Large and Small Buyers, the following, amongst a variety of others, are included in this Sale.

The **ART of ILLUMINATING**, as practised in Europe from the Earliest Times, illustrated by Borders, Initial Letters, Alphabets, &c., selected from the British Museum, South Kensington Museum, and other important Collections. By W. T. TAYLOR, with an Essay on the Art, and Instructions as to its Practice in the Present Day, by M. DIBBY WYATT. 4to. splendidly bound (published at 2s. 10s.).

"A magnificent and eminently serviceable work contains 108 Plates, all fully illuminated, and printed in colours and gold on vellum paper, and 104 pages of Text, surrounded by borders in colours. Counting the various specimens of letters and borders given in the 102 pages, there will be found 1,008 illuminated Figures.

PARADISE and the PERI. By THOMAS MOORE. 54 splendidly illuminated pages, small folio, elegantly bound bevelled boards (published at 2s. 2s.).

"Moore's 'Paradise and the Peri,' gorgeously illuminated by Messrs. Owen Jones and H. W. Brown, executed on stone by Mr. Albert Warren, printed and published by Day & Son. Mr. Owen Jones has produced some of the most magnificent combinations of colour and design we remember to have seen. His borders are all dazzling, and many of exquisite beauty." *Albion.*

NOW FIRST PUBLISHED.

The **PENTATEUCHAL PSALMS**, richly illuminated. A small Volume illuminated with magnificent Borders on every page. The Illustrations, both Borders and Miniatures, are Fac-similes, or adaptations, from the most remarkable pages of celebrated illuminated Manuscripts in the British Museum, the Bibliothèque Impériale, and other collections. By NOEL HUMPHREYS, Esq.

The whole reproduced by Messrs. Day & Son, in the most finished style of Chromo-lithography, under the direction of H. NOEL HUMPHREYS.

SCULPTURE in MARBLE, TERRACOTTA, BRONZE, IVORY, and WOOD. Selected from the Royal and other Collections. Edited by J. B. WARRING. 18 Chromo-lithographic Plates of the highest style of finish, and 13 Wood Engravings. 1 vol. folio, half-bound elegant, published at 2s. 10s.

RICHARDSON'S MONASTIC RUINS of YORKSHIRE: containing upwards of 30 large and beautifully-tinted Views, together with the various Vicarages, Ground-plans, Details, Sections, and Arms, &c. of celebrated Abbeys. The complete Work, in 19 folio Parts (published at 12s. 12s.).

"Few works of lithographic Art have equalled this publication, and it would be difficult to point out any by which it has been surpassed. The subject-matter can hardly be said to be a local one, because the history of the places illustrated is, in fact, so intimately connected with the general history of England, that all Englishmen must feel an interest in what is described." *Times.*

The **GRAMMAR of ORNAMENT.** By OWEN JONES. Being a Series of 3,000 Examples from various styles, exhibiting the Fundamental Principles which appear to reign in the composition of Ornament of every period; 101 Imperial Folio Plates, elaborately printed in colours and gold, and published at 18s. 12s.

POTTERY and PORCELAIN. Selected from the Royal and other Collections. Edited by J. B. WARRING. 15 Chromo-lithographic Plates of the highest style of finish, and 10 Wood Engravings. 1 vol. folio, half-bound elegant, published at 2s. 10s.

THE RAMBLER.

CHANGE OF PUBLISHERS.

The Proprietors beg to inform the Public, that Messrs. WILLIAMS & NORGATE will henceforth publish this Periodical, which will continue to uphold the same principles as heretofore, namely, the harmony of faith and of submission to infallible authority with free inquiry in science, and with the admission of the just and necessary claims of social progress and political right and freedom.

All communications should be directed to Messrs. Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and at South Frederick-street, Edinburgh. All communications for the Editor and Books for Review to the care of the Publishers.

THE RAMBLER appears at intervals of two months. The next Number, on November 1, begins a New Volume, and will contain a Review and extended Analysis of Dr. Doellinger's New Work on the Papacy.

Price Three Shillings each Number.

Published for the Proprietors, by Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 30, South Frederick-street, Edinburgh.

- VII. TRADES' UNIONS.

CONTEMPORARY LITERATURE.—1. Theology and Philosophy.—2. Politics, Sociology and Travels.—3. Science.—4. History and Biography.—5. Belles-Lettres.

"The present number is worthy of the reputation which the Westminster has obtained for the argumentative and philosophical character of its contents."—Observer.

"Thus it is that we find ourselves quarter after quarter expressing our admiration of the Westminster, with which, on almost every possible point of political belief, we are at direct issue."—Morning Herald.

"The Westminster Review is full, as usual, of ability, marred by a doctrinal harshness and tendency to extreme views."—Spectator.

"The seven articles, or rather elaborate essays, in this quarter's number, well uphold the high character long maintained by this able Review, and even where we cannot concur in all the inferences drawn, we freely acknowledge the keen intellectual power, the extensive learning, and the easy handling of language displayed by the several writers."—Carfax Reviewer.

"We thus part with our old friend, more and more delighted with the freshness, originality and boldness of thought and expression, which have so long characterized the Westminster Review. Why it should not be found on the table of every literary institution, and go the rounds of every Book-Club, biography alone can answer. We can only say that the editor and writers are bold thinkers on all subjects—not trammelled by any parties, sects, or systems, and only those who have similar habits can appreciate their generous and unrelenting labours on behalf of human progress."—Dover Chronicle.

THE WESTMINSTER REVIEW is published by GEORGE MAXWELL, 8, King William-street, Strand, London, and may be had of all Booksellers, and at the principal circulating Libraries in the United Kingdom.

THE PRINCE CONSORT.—A genuine PHOTOGRAPH, by Mayall, of the PRINCE CONSORT, elegantly mounted on tinted card paper, for framing, will be GIVEN with THE QUEEN OF SATURDAY, November 2. A large and beautifully engraved Portrait of the Duke of Saxe-Coburg-Gotha (the Prince Consort's Brother) will appear in this Number of THE QUEEN.

The other Illustrations will comprise: Jenny Lind at Exeter Hall, with Portrait of her Husband, Mr. Otto Goldschmidt—The Marriage Ceremony in the East and in the West (two Illustrations, by Florence and Ada Claxton)—Interior of the New Royalty Theatre—M. Fechter in 'Othello'—Five Exterior Views of Westminster School—The Court in Scotland: Laying the Foundation-stone of the Post-Office, Edinburgh—Volunteer Reception of Her Majesty by Torchlight.

The Engravings of the Great Exhibition in THE QUEEN are fresher and more copious than in any other journal. See the Supplement with No. 8 (October 29th) and the View in THE QUEEN of Saturday, November 2nd. These Views are from Photographs taken expressly for THE QUEEN.

In addition to the attractions above enumerated, with THE QUEEN of Saturday, November 2nd, will be published the following Needlework Illustrations: Netted and Darned Antimacassar—Braid and Crochet Edging—D'Orley in Herring-bone Stitch.

To be had of all Booksellers; and from the Office, on receipt of six stamps.

London: 246, Strand, W.C.

THE "GORILLA."

In leather case.

A most laughable "catch."

Post free, 24 stamps.

STEREOSCOPIC COMPANY, 54, CHEAPSIDE.

Just published, in fcap. 8vo. (with Map of Confederate Europe,) price 7s. 6d. cloth.

THE NEW KORAN; or, Text-Book of Turkish Reformers, in the Teaching and Example of their esteemed Master, JAID MOHAMED.

The seed which has been industriously scattered by American missionaries is producing a fruit which they never looked for. If the contemplated railway colonisation should be carried out in Turkey, and the country thrown open to Western emigrants, the New Koran will prove an effective auxiliary in breaking up the old prejudices of the East, and reconciling opposite nations and sects.

London: George Manwaring, 8, King William-street, Strand.

AN EXCELLENT BIRTHDAY OR CHRISTMAS PRESENT. BUTTER'S TANGIBLE ARITHMETIC AND GEOMETRY FOR CHILDREN; with numerous illustrative cuts, forming a permanent fund of Amusement and Instruction. With 144 Cubes, in a box, price 3s.; large size, at 5s., 6s. and 7s.

BUTTER'S DISSECTED TRINOMIAL CUBE: an elegant Mathematical Illustration. A highly interesting Puzzle. With ample description and explanation, in a box. Price 3s.

RAB AND HIS FRIENDS. Extracted from 'Horæ Subsæcivæ.' Seventeenth Thousand. Fcap. sewed, 6d.

SUPPLEMENTARY CHAPTER to the LIFE of the Rev. JOHN BROWN, D.D. A Letter to the Rev. John Cairns, D.D. Second Edition. Crown 8vo. sewed, 2s.

"WITH BRAINS, SIR." Extracted from 'Horæ Subsæcivæ.' Fourth Thousand. Fcap. sewed, 6d.

"Of all the John Browns, commend us to Dr. John Brown, the physician, the man of genius, the humourist, the student of men, women and dogs. By means of two beautiful volumes, he has given the public a share of his by-hours, and more pleasant hours than these it would be difficult to find in any life. Dr. Brown's master-piece is the story of a dog called 'Rab.' The tale moves from the most tragic pathos to the most reckless humour, and could not have been written but by a man of genius. Whether it moves to laughter or tears, it is perfect in its way, and immortalizes its author."—*Times*, Oct. 12.

Edinburgh: Edmonstone & Douglas.

London: Hamilton, Adams & Co.

This day, Vol. III. price 5s. 6d.; also Binding Cases, 1s.

TEMPLE BAR:

A LONDON MAGAZINE for TOWN and COUNTRY READERS.

Edited by G. A. SALLA.

London: Ward & Lock, 153, Fleet-street.

On the 1st and 15th of every Month, in fcap. 8vo. paper covers, in the French Style of Binding,

THE SHILLING VOLUME LIBRARY.

The CHANCELLOR of the EXCHEQUER, when proposing the Repeal of the Paper Duty, used as an argument for its removal the superiority, both in paper and print, of French popular Literature over the same class of works produced in England; and he attributed the reason of this difference to the fact that paper was untaxed in France, while it was taxed in England. Happily this distinction no longer exists. On the 1st October paper became free of Taxation. Therefore the

SHILLING VOLUME LIBRARY

is projected with the view of giving to the reading public the full benefit of the abolition of the Paper Duty. Each book in the

SHILLING VOLUME LIBRARY

will present to the buyer the utmost possible value both in quantity and quality.

The Original Works of Contemporary Writers will be given in the

SHILLING VOLUME LIBRARY,

set up in new and bold type, clearly printed on good paper, easy to read, and well worth recurring to for re-perusal.

SHILLING VOLUME LIBRARY

Works of Imagination will have precedence; but books in other departments of Literature that are calculated to refine the taste and inform the mind, as well as to amuse, will not be overlooked. The greatest care will be taken, so as to render the

SHILLING VOLUME LIBRARY

in all respects unexceptionable reading both for the young as well as for the old.

The following will be ready on November 15:—

1. FAMILY CREDIT. By WESTLAND MARSTON.
2. WHICH WINS—LOVE OR MONEY? By the Author of 'WHITEFRIARS.'
3. LADY LISLE. By M. E. BRADDON.
4. AMOS CLARK; or, the POOR DEPENDENT. A Story of Country Life in the Seventeenth Century. By WATTS PHILLIPS, Author of 'The Dead Heart,' &c.
5. CANARY BIRD: a Story of Town Life in the Seventeenth Century. (Sequel to 'Amos Clark.') By WATTS PHILLIPS, Author of 'The Dead Heart,' &c. [Ready Dec. 1.]

London: Ward & Lock, 153, Fleet-street.

OLIVER'S HISTORY OF EXETER.

In 8vo. with Plan, price 2s. 6d. cloth.

THE HISTORY of the CITY of EXETER. By the Rev. GEORGE OLIVER, D.D. With a short Memoir of the Author, and an Appendix of Documents and Illustrations.

London: Longman, Green, and Co. Paternoster-row. Exeter: William Roberts, Broadgate.

In 8vo. with Coloured Map and Illustrations, price 10s.

JERUSALEM: a Sketch of the City and Temple, from the Earliest Times to the Siege of Titus. By THOMAS LEWIN, Esq., of Trin. Coll. Oxon. M.A., Author of 'The Life of St. Paul,' 'Caesar's Invasion,' &c.

London: Longman, Green, and Co. Paternoster-row.

New ready, in post 8vo. with 2 Illustrations, price 7s. 6d.

WILD DAYRELL: a Biography of a Gentleman Exile. By JOHN KEMP, Esq., Author of 'Shooting and Fishing in Brittany,' 'Sketches in the South of France,' &c.

London: Longman, Green, and Co. Paternoster-row.

NEW EDITION OF MRS. PIOZZI'S LETTERS AND MEMOIRS.

On Friday next will be published, in 2 vols. post 8vo. with Portrait and Plate,

AUTOBIOGRAPHY, LETTERS and LITERARY REMAINS of MRS. PIOZZI (THERESA). Edited, with Notes and some account of her Life and Writings, by A. HAYWARD, Esq. Q.C. Second Edition, thoroughly revised, with copious Additions.

The additions to the present edition comprise, amongst other matters, from fifty to sixty pages of fresh entries from Mrs. Piozzi's private diary ('*Tarantula*'), a selection of her curious marginal notes on books, and copious extracts from Letters hitherto unpublished. So much light is thrown by this accession of materials, especially by the excerpts from *Therese's* alleged raptures between Dr. Johnson and Mrs. Piozzi, that the Editor has re-written that part of his Introductory Memoir of her Life which relates to this memorable literary quest.

London: Longman, Green, Longman, and Roberts.

NEW WORK BY CAPTAIN RICHARD BURTON.

On Thursday next will be published, in 1 vol. 8vo. with numerous illustrations,

THE CITY of the SAINTS; and across the Rocky Mountains to California. By RICHARD F. BURTON, Captain H.M. Indian Army; Fellow and Gold Medalist of the Royal Geographical Societies of France and England; H.M. Consul in West Africa; Author of 'Meccah and Medinah,' &c.

London: Longman, Green, Longman, and Roberts.

COL. WOLSELEY'S ACCOUNT OF THE CHINA CAMPAIGN.

On Wednesday next will be published, in 1 vol. 8vo. with Portrait of Lieut.-Gen. Sir J. Hope Grant, G.C.B., Commander-in-Chief of the Expeditionary Army, price 10s. 6d.

NARRATIVE of the CHINA WAR of 1860, and of a Short Residence among the Rebel Forces at Nankin. By Lieut.-Col. WOLSELEY, 90th Light Infantry, Deputy Assistant Quartermaster-General to the Expeditionary Force.

London: Longman, Green, Longman, and Roberts.

THE DUKE OF MODENA and MR. GLADSTONE.

This day, Second Edition, 8vo. 2s. 6d., or by post 2s. 8d.

A VINDICATION of the DUKE of MODENA from the CHARGES of Mr. GLADSTONE. From Official Documents and other Authentic Sources. Selected and Revised, with an Introduction by the MARQUIS of NORMANBY, K.G.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

ITALIAN LANGUAGE.

MARIOTTI'S ITALIAN GRAMMAR. Third Edition. A Practical Grammar of the Italian Language. New Edition, revised, enlarged and improved. By A. GALLENGA, Italian Professor at University College, London, Author of 'Italy Past and Present,' &c. 12mo. cloth, 3s.

"Mariotti's work recommends itself by its method and clearness, by its small bulk, and withal by its very abundant collection of short and pithy examples illustrating brief and precise rules. The Exercises also are short and simple, and always to the point."—*Examiner*, Feb. 20, 1858.

"For the English student of the Italian language there can be no better grammar."—*Athenæum*.

BIAGGI'S PROSATORI ITALIANI. Specimens of Italian Prose Writers, from the 13th Century to the Present Time, preceded by a Selection of Easy Extracts, with Explanatory Notes by ANTONIO BIAGGI. Thick 12mo. cloth, 6s.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

OLLENDORFF'S GERMAN METHOD. A new Translation (unabridged) from the Original Edition, by H. W. DULCKEN. 12mo. cloth boards, 5s. 6d.

— A Key to the Exercises. 12mo. cloth, 3s. 6d.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

The Sixteenth Edition.

WILLIAMS (T. S.).—MODERN GERMAN and ENGLISH CONVERSATIONS, and Elementary Phrases, the German revised and corrected by A. KÖKEMÜLLER. 16th Edition, improved and re-edited. Cloth boards. 1860. 3s. 6d.

A sale of 40,000 copies of this eminently useful little book testifies sufficiently to its excellence. It is used in numerous first-rate colleges both in England and in Germany.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

EASY GERMAN READINGS.

I. NIEBUHR'S GRIECHISCHE HEROEN-GESCHICHTEN. Tales of the Greek Heroes, the German Text, with grammatical and explanatory Notes, Questions for Conversation, and a complete Vocabulary, by Dr. A. BUCHHEIM. Second Edition. 12mo. cloth, 2s. 6d.

II. GOETHE.—Aus GOETHE'S ITALIENISCHER REISE. Sketches of Travels in Italy, the German Text, with idiomatic and explanatory Notes, Questions for Conversation, and a complete Vocabulary. By Dr. A. BUCHHEIM. 12mo. cloth, 2s. 6d.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

SCHOOL DICTIONARIES.

SCHNEIDER and JAMES.—GERMAN and ENGLISH DICTIONARY for Travellers and Students, compiled with a special regard to Pronunciation and Accentuation, after Heinisch and Walker. A New Edition, in which the German-English Portion has been completely remodelled; the Genitives and Plurals, the Irregularities of Verbs, of Substantives and Adjectives, have been added throughout. (Stereotype.) Square 8vo. strongly bound in roan, 6s.

MOLÉ and JAMES.—FRENCH DICTIONARY. DICTIONARY of the FRENCH and ENGLISH LANGUAGES for general use, with the Accentuation and a literal Pronunciation of every word. Square 8vo. bound in roan, 6s.

GRASSI and JAMES.—ITALIAN and ENGLISH DICTIONARY, for general use, with the Italian Pronunciation and Accentuation, the terms of Science and Art, of Mechanics, Railways, Marine, &c. Square 8vo. strongly bound, 6s.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

The OKAVANGO RIVER. A Nar-

rative of Travel, Exploration and Adventure. By CHARLES
JOHN ANDERSSON, Author of 'LAKE NGAMI.' 8vo.
with Portrait of the Author and numerous illustrations. 21s.

"Mr. Andersson's book, from the number of well-told adven-
tures, its rich fund of information, and spirited illustrations, will
command a wide circle of readers. The interest of his story never
flags for a moment."—*Athenæum*.

LADY CHARLOTTE PEPYS' DO-

MESTIC SKETCHES in RUSSIA. 2 vols. 21s.

"This very agreeable book presents a photograph of Russian
home life, the simplicity of which is as charming as the manner
of relating it is attractive."—*Messenger*.

THE SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare
and unpublished Documents, by Dr. CHALLICE. 2 vols.
with Portraits, 21s.

THE VALLEY of a HUNDRED

FIRES. By the Author of 'MARGARET and her BRIDES-
MAIDS.' Illustrated by J. E. MILLAIS, A.R.A. 5s.

Forming the New Volume of HURST & BLACKETT'S
STANDARD LIBRARY of CHEAP EDITIONS of POPULAR
MODERN WORKS.

"Whether in delineation of character, in lucidity and strength
of plot, in description of scenery, in representation of life as it is,
or in sound and well-enforced moral, we know no novel of the last
three or four years to equal this latest production of the popular
Author of 'Margaret and Her Bridesmaids.' If asked to classify
it, we should give it a place between 'John Halifax' and 'The
Cartons.'"—*Herald*.

COLBURN'S UNITED SERVICE

MAGAZINE, and NAVAL and MILITARY JOURNAL
for NOVEMBER, contains:—The Duke of Cambridge and
the Command of the Army—Our Iron Fleet, by Admiral Sir
G. Sartorius—Volunteers on Government Duty—Suggestions
for an Embodied Reserve, by Colonel Lord West—Continuous

The New Education Minute.

This day is published, price 2s. 6d. boards,

POPULAR EDUCATION IN ENGLAND.

Being an Abstract of the Report of the Royal Commissioners on
Education. With an Introduction and Summary Tables.

By HERBERT S. SKEATS.

"Mr. H. S. Skeats's 'Abstract of the Report of the Royal Com-
missioners' is at once comprehensive, concise and clear. All the
really important points, either as to matters of fact or of sugges-
tion, are compressed into the compass of one small volume. Yet
the arrangement is so good, that there is no consequent confusion
or obscurity; while the outline of what has been done, is doing,
or is proposed to be done for the formation of a sound and wide-
spread education among the people, is simple, brief and intelli-
gible, without being bald and uninteresting from its brevity. It
is a useful work well done."—*Economist*.

In 4 vols. royal 8vo. price 6l. 8s.

BRITISH SEA-WEEDS NATURE- PRINTED.

Containing 70 Coloured Nature-Prints, with Engraved magnified
Dissections of the whole Species described in the Volume.

The Descriptions by WILLIAM G. JOHNSTONE and ALEX-
ANDER CHODD.

The 'Nature-Printed British Sea-Weeds' forms Four handsome
Volumes in royal 8vo., consisting of 210 Plates, with the necessary
Letter-press. Either Volume may be had separately. The price
of each is 2l. 2s.

In 2 vols. royal 8vo. price 4l. 4s.

BRITISH FERNS NATURE- PRINTED.

The Descriptions by THOMAS MOORE, F.L.S.

The work contains 122 Plates and 800 pages of Letter-press, and
is completed in Two Volumes, royal 8vo., uniform with the
'Nature-Printed British Sea-Weeds.' Either Volume may be had
separately. The price of each is 2l. 2s.

"For this kind of work Nature-Printing is exactly adapted.
Very delicate and inimitable ramification is most attractively
and accurately represented."—*Athenæum*.

This day is published, in 1 large vol. crown 8vo. price 4s.

HEALTH, HUSBANDRY, AND HANDICRAFT.

By HARRIET MARTINEAU.

"Full of suggestiveness and sound practical knowledge. Alto-
gether, the work is one of vast importance, and we earnestly
recommend it to the notice of our readers."—*Press*.

London: BRADBURY & EVANS, 11, Bouverie-street,
Fleet-street, E.C.

LONDON, SATURDAY, NOVEMBER 2, 1861.

LITERATURE

The Life and Correspondence of Admiral Sir Charles Napier, K.C.B., from Personal Recollections, Letters, and Official Documents. By Major-General Elers Napier. 2 vols. (Hurst & Blackett.)

THE pride of descent was so strongly marked in Louis-Philippe that he was frequently heard to declare, — he was infinitely prouder of being descended, through his mother, from an illegitimate child of Louis the Fourteenth, than he was of being lineally and legitimately descended, through his father, from Louis the Fourteenth's brother, the Duke of Orleans. There was a more wholesome pride, to use a homely word, in the subject of this *Life and Correspondence*. He was of a race of antique nobility, no member of which was ever silent, willingly, as to the merits of his house or the virtues of the individual, — and there was much to be said, and more to be becomingly thought of in both these respects. The late Admiral is seldom mentioned in biographical notices without especial record being made of his belonging to a family, the head of which had enjoyed the Barony of Merchiston for more than three centuries. This record seemed to be some compensation for the fact, that Charles John Napier was the son of a younger son of the House of Napier of Merchiston, — a house which conferred on Lady Sarah Lennox, the first love of the young George the Third, the honour of admitting her, in her first widowhood, into a matrimonial alliance with one of its sons.

With questions of "blood" the Admiral no more concerned himself than inasmuch as he took its responsibilities, and was careful that it should not suffer disparagement by his acts or bearing. However careless in the matter of outward appearance, and with some lack of "niceness" in the choice of expressions, there is not a recumbent stone Napier who could turn uneasily on its monument and accuse the Admiral of having acted unworthy of the traditions of his house. In Hades he may look in the face of every cousin who has preceded him, that way, with courageous confidence, and he has not left one behind him who has not reason to be proud of his memory. For himself, he dated his nobility from his own early deeds; and if he had one especial ancestor of whom he was more vain than of another, it was not any Napier of Merchiston, but honest and able Napier of the Logarithms.

This Scotch lad, British Admiral, Portuguese Count, will undoubtedly rank among the first of our sea-worthies. He was flung from school to ship-board when he was but thirteen, and as soon as he found his legs, he set forward in that active and progressive career from which he never withdrew till his last summons took him to the far-off land. His course was a long one, indeed. It opened when the French Republic, one and indivisible, was turning the world upside down, in 1799; and it closed with negotiations between himself and Garibaldi, arising out of the Admiral's offer to go round to the Mediterranean and capture the Neapolitan fleet for him!

Within those two periods there was a vast amount of work accomplished, and generally accomplished well. His 'prentice hand was exercised in the North Sea and the Mediterranean. How efficient he proved when he came out of that 'prentice period will be remembered by all who have read of his doings and his daring in the brig which he commanded in 1808, the *Recruit*, and which he handled in

a way which reminds us of the chivalry and unselfishness of Cochrane.

At the taking of Martinique, he was the foremost man to scale the walls, and, indeed, he always looked upon this sort of occupation as a luxury. As he was Posted for his conduct here, and shelved for a time, as well as Posted, he proceeded to Spain as a volunteer, and, in field and siege practice there, not only passed his time pleasantly and profitably, but laid up a mass of valuable experience which he turned to good account in the war in the East, when he did not attack the walls of besieged cities riding on a donkey and conspicuous in his shirt-sleeves. We find him combining the soldier and sailor, subsequently, in the Mediterranean, and closing the first epoch of his active service in the Anglo-American war of 1813, in the course of which he and Broke manifested to the United States captains such a spirit of courteous gallantry with readiness for hard blows, as might be sought for in vain in the most exaggerated of the romances of chivalry.

The piping times of peace kept Capt. Napier unemployed, save in a few political demonstrations, till the struggle for sovereignty in Portugal called him to active service. From 1829 to 1833, he was, in one way or other, benefitting that little, ungrateful kingdom, capping all his deeds by capturing the Miguelite fleet, for which were conferred on him a title of Viscount, which his own government declined to allow him to use, and a pension which the Pedroite government declined to regularly pay.

Six years later, he served second to Admiral Stopford, who allowed him to be first in the Mediterranean. This command was signalized by his great successes on the coast of Syria, whence his mission was to eject the Egyptians and re-establish the authority of the Turks. How he stormed Sidon, overcame the ferocious Ibrahim Pacha, at Beyrout, and captured St. Jean d'Acre, is a series of tales of war, with comic as well as serious aspects, fresh in all men's memories. The series comes to a very satisfactory end by his dictation of terms to Mehemet Ali, when Napier held supreme command of the Mediterranean Squadron.

Subsequently, he held command of the Channel Fleet, and sorely tried the tempers of Ministers, even when they were of his own political colour, by his strongly-expressed sentiments in Parliament, and his letters out of it, in connexion with reforms in the Navy, the treatment and registration of seamen, and the importance of maintaining a Channel Fleet of sufficient strength to secure the honour and safety of the nation. Since Admiral Vernon's days, there had not been so fiercely outspoken a commander, and what swart Vernon was to Bedford, "Black Charley" was to any Premier of his day. All this, however, rendered him the more popular even with those who were half shocked at the Admiral's eccentricities and half disgusted by the vanity of which he was himself unconscious. When the war with Russia broke out, the popular voice may be said to have wafted him to the Baltic, with all his mingled boastings and monitions, and to have given him scant welcome when he returned, with a single leaf or two of laurels, his ships uninjured, and a mountain of accusations against the Ministers who had commissioned him to perform impossibilities, and who had withheld all aid and assistance to further him in the accomplishment of that rather difficult task.

From this period, he became more actively engaged ashore as senator, farmer, author and agitator; looking seaward now and then, in hopes of observing a blue-peter to invite him

aboard, and turning thence to forget his disappointments in renewed exercise in the vocations indicated above. His last essay, as we have said, was to become the Admiral of Garibaldi; but this essay proved unsuccessful, and Sir Charles, dying soon after, has found a worthy biographer and chronicler in the person of his step-son, who thus describes one of the early traits in the character of his hero:—

"His arrival in London was marked by a characteristic circumstance, as related by one of the family. On landing at the Tower Stairs, the officious porters began to lay violent hands on his luggage. He had been duly cautioned against London sharpers, and thinking they were going to rob him of his sea-chest, he seated himself across it, and drew his dirk to defend his property—thus showing that the same resolute spirit animated the midshipman of thirteen as did afterwards the admiral of seventy. I have heard another anecdote connected with this his first visit to London. He was staying at the house of a relative (the father of Mr. Mark Napier, the historian, and author of 'The Life of Montrose'), who, after showing the youngster all the London sights, took him to see the lions at the Tower; amongst them was one which the keeper represented as being so very tame 'that,' said he, 'you might put your hand into his mouth.' Taking him at his word, the young middy, to the horror of the spectators, thrust his hand into the animal's jaws, which, no doubt, was taken as much by surprise as the lookers-on. It was a daring feat; but, providentially, he did not suffer for his temerity. This story recalls to mind the attack made by Nelson, when a midshipman, on a Polar bear; and the soldier Charles Napier's bold encounter with an eagle, in his boyhood, as related by Sir William Napier in the history of his gallant brother's life. It is certainly a remarkable coincidence, and one worthy of notice, that these distinguished men should, in their youth, have thus singularly evinced that fearlessness and unflinching daring which, in after years, so eminently characterized their respective careers. These three parallel cases would seem to have been omens of future greatness, which, as Sir William Napier remarks, 'would have been strongly dwelt upon by the old chronicler of the heroes of ancient Greece and Rome.' In May, he joined the *Renown*, a new ship of 74 guns, commanded by Capt. Eyles, and bearing the flag of Rear-Admiral Sir John Borlase Warren. On going on board, and being left alone in the gloomy region of the cockpit, a fit of despondency—such as often attends the young midshipman's first entrance on a nautical existence—overcame young Charley, and, seating himself on his chest, he burst into a passionate flood of tears. He was, not, however, of a desponding disposition, and soon got the better of his weakness—made himself quite happy and at home; and is described by the present Admiral Sir Augustus Clifford—then also for a short time a midshipman on board the same ship—as a 'fine, sturdy, energetic boy, small for his age, but active, and very strong.'"

The following is a sketch of a brilliant affair, by which he inaugurated his Post rank, gained in 1809. It is told by himself, with a comment by the biographer:—

"'Shortly after this, I was made Post into the *Jason* by Sir Alexander Cochrane, but did not immediately join, and in the month of March was employed to watch the motions of a French Squadron and two frigates at anchor in the *Saintes*. On the 14th of April a body of troops was landed, and in the night they put to sea. I immediately bore up in chase, making signals to the rest of the squadron, which was also done by the *Hazard* and *Hawke*. The *Neptune*, bearing the admiral's flag, and the *Pompée*, brought up a strong breeze, and exchanged a few shot, but they soon dropped astern. The *Recruit* sailed well, and I took up my position on the quarter of the *D'Hautpout*, within grapeshot, where I remained the whole night, leading on our squadron, the enemy retreating in a line abreast. At daylight the *Hawke*

brig was three or four miles astern of the *Recruit*, the *Pompée* five or six, the *Neptune* seven or eight. I then commenced firing on the sternmost, yawing under her stern and on her quarter, exposed to the stern guns of three sail of the line, and the occasional broadsides of the other two, who had the superiority of sailing; but being afraid of having their spars knocked away, they seldom rounded to, and they fired in such a hurry that we were only hulled three times. I once crossed their sterns, fired three or four broadsides, and again took up my position on the *D'Hauptoult's* quarter, where they allowed me to remain the whole day, contenting themselves with yawing and firing their stern guns, but without much effect, being always in a hurry to resume their course. Towards evening the *Pompée* had gained on the *D'Hauptoult*, and the French commodore, seeing the impossibility of saving her without risking an action, hauled to the southward as the *Pompée* was coming. I parted on chase of the other ships, in hopes of drawing the *Latona* and *Castor*, now in sight, for action, after me, but they did not see my signals and followed the *Pompée*. In the night I lost the enemy, from their superiority of sailing; two days after, I joined the *Pompée* and *Castor* at the close of the action with the *D'Hauptoult*, who was captured, and I was removed into her on the spot by Sir Alexander Cochrane, in consequence of my conduct, as set forth in his and Capt. Fahies's letter. In the part which the *Recruit* played in the capture of the *D'Hauptoult*, it is difficult which most to admire—the gallantry or seamanship of her youthful commander. Several times during the chase, when Sir Alexander Cochrane thought the little vessel in most imminent danger, did he order the signal to be made for her recall; but before the flags for that purpose could be bent on, the *Recruit* had, by a skilful manœuvre, placed herself in a less perilous position, when the order was cancelled again and again. It is related that the French Admiral, on delivering up his sword, asked the name of the little vessel that had annoyed and retarded his movements so much; on being told she was called the *Conscript*, or *Recruit*, he said, with a sad smile, and a shake of the head, 'Recruit!—no, that no conscript, that one very old soldier!'

There are many sides to the character of "Black Charley," and here is one of its grotesque phases. The time is 1813, when Toulon was being blockaded. Napier was in command of the *Euryalus*, in which he took a run to Port Mahon, Minorca, where he found the 74-gun ship *Rivoli*, whose then Captain is now Admiral Sir Graham Hamond:—

"An officer who was then on board the *Rivoli*, lately recounted to me a most amusing anecdote about 'Charley Napier,' when he commanded the *Euryalus*, whilst they were together at Port Mahon. 'One fine day,' said the officer in question, 'I landed and went up to the usual shop for supplying us with groceries. At the door I found Captain Napier, to my great surprise, seated on a donkey, dressed in a yellow coat, yellow waistcoat, and yellow trousers, laced cocked hat, and a pair of naval epaulettes. I had no further conversation with him beyond common recognition and shaking hands, but I was afterwards informed that he had laid a wager with some one, that he would so ride about Mahon streets, and that he had begun at six o'clock that morning—it was about noon when I saw him, and I understood that he continued on till the evening, and won his bet. I have only stated what I actually saw with my own eyes.' This was the first time I had ever heard so detailed an account of the origin of the 'yellow dress,' which is still preserved as a sort of family relic. I can remember it well to the present day: the lining was rich cherry-coloured satin, and large buttons covered with the same, so as to make it look as conspicuous and ridiculous as possible. I have heard Captain Napier relate with much humour the circumstance of his winning this extraordinary dress from a tailor at Port Mahon, who agreed to give it to him for nothing, on condition that he would wear it the whole day in the streets. The bargain was struck—Captain Napier doffed

his uniform, donned the 'yellow,' and began to perambulate the streets. Mr. Snip meanwhile collected all the urchins of the place to follow and hoot at the man in the 'quarantine' dress. The latter was not, however, thus to be put down by the clamour of the mob—he told them to laugh at the tailor, and not at him, as he was to have the dress for nothing, provided he wore it. The tables were immediately turned upon the poor tailor, who retired quite disconcerted, and 'Mad Charley' carried off in triumph the yellow dress."

The Captain could scale walls with ease and intrepidity; but when he came to scale Helicon, he could no more ascend with dignity, or ride Pegasus, than Cicero himself, which might have consoled Napier had he only thought of it:—

"In a subsequent tour [writes the biographer] I made through Switzerland, I happened to visit this Island of St. Pierre. Although upwards of a quarter of a century had elapsed, on looking over the 'Livre des Étrangers,' at the little hotel, my attention was rivetted by Captain Napier's well-known hand-writing, in which was traced the following ludicrous attempt at rhyme—the only poetic effusion I ever knew him to be guilty of:—

The English, who travel more than all other nations together,
Collect in great towns to enjoy the delights of the weather;
But here in this Isle, formed for love and delight,
Few seem to have soul to pass even the night.

They come but their names to inscribe in the room of Rousseau,
Take a short walk, and away from the island they go;
Returning to England they talk of the beauties they've seen,
And drive other fools to follow the course they have been.

The writer of this, known by the name of 'Mad Charlie',
Passed a whole week in the island of St. Pierre;
Its charms and its beauties ne'er his senses could pall,
He'd sooner live here than at Merchiston Hall."

This has small savour of the Hippocrene about it; and yet the writer had, at least, simplicity enough about him to have qualified him to prove a poet. Take the following instance:—

"Amongst our acquaintance was a Mr. —, a man with more talent than money, and perhaps less principle than either. This person was a shrewd and needy adventurer, who in a great measure depended on the ready exercise of his wit to keep up a tolerable appearance in society, at the expense of the less suspicious of his more wealthy friends; and in Capt. Napier he found one who perfectly answered the object he had in view. At the instigation of Mr. —, he engaged in various speculations, the most ruinous of which eventually proved to be that of establishing iron steamboats on the Seine. The gigantic powers of that motive agent had already dawned upon his mind; he vaguely began to form a conception of the vast purposes to which it might be applied; and well would it have been for him had he allowed others first to try those experiments which finally cost him nearly all he possessed! Be that as it may, he gave himself up—thoughts, time, and capital—with all that ardour which characterized his energetic nature, to the object by which he was fully engrossed. Wooden steamers were found not to answer for the navigation of the Seine, owing—as far as I can remember—to their large draught of water, and they were superseded by the recently invented iron vessels, in one of which Capt. Napier, starting from the Thames, adventurously crossed the Channel and proceeded up the Seine to Paris; it being, I believe, the first vessel of the kind that ever ventured out to sea. This fragile craft was flat-bottomed, drew very few inches of water, and was only calculated for inland navigation; her paddles, too, were so fixed at the stern that they were liable to be washed away by every sea, in the trough of which she must then inevitably have been swamped. No little credit, therefore, is due to the intrepidity of the man who ventured in such a boat, at an inclement season of the year. On his arrival at Paris, thousands flocked to see this eighth wonder of the world in the 'bateau à vapeur en fer,' though it puzzled many of the spectators to conceive how such a material could possibly be made to float; and a greater number were more

incredulous, and declared it was an imposture, as such a thing could never be!"

In this venture, Napier lost a fortune, but not his spirits. He took most things easily, and was particular in nothing except the performance of his duty and in impressing the public with the fitness of their being aware of that *spécialité* of his. That he was not particular in dress, let the subjoined extract tell:

"It is well known that he was never very particular in matters of dress; and it is recounted that on one occasion having called on an elector for his vote, the worthy tradesman happening to be from home, he then addressed himself to his wife, who expressed her incredulity that such a 'shabbily-dressed fellow' could be Capt. Napier, of the Royal Navy, of whom she had heard so much. In vain did the anxious candidate for her husband's vote endeavour to convince her of his identity; he had neither card nor proof of any kind to show, and the lady would not take him at his word, or promise so doubtful-looking an individual her powerful support. At last a bright idea suggested itself, of proving that he was 'himself.' He unbuttoned his waistcoat, and displayed on the front of his shirt 'Charles Napier,' written at full length. The lady was convinced, and gave him the promise of a 'plumper.'"

We are again with him afloat on the 5th of July, 1833, when in command of the *Pedroite* fleet. On that day was seen an instance new to naval annals—"a line-of-battle ship boarded and captured by a small frigate in a quarter of an hour." Both vessels were named the *Rainha*. The details are long; and we can only find room for the following remarks by the biographer on the bearing of his young brother in this his first fight:—

"Commodore Wilkinson and young Napier—as stated—leading the boarders, were the first on the enemy's deck. At this moment the two ships yawed apart, thus leaving them for a few minutes alone and unsupported. During this time they were surrounded by their enemies, but defended themselves gallantly, slashing away right and left, until Napier was unfortunately disarmed by his sword becoming fixed between the ramrod and muzzle of a musket, and being thus wrenched from his hand. Young, vigorous and endowed with extraordinary activity, he sprang, unarmed as he was, on the foremost assailant, seized him with the left hand by the throat, and with the other planting a well-directed blow in his face, sent him headforemost over one of the guns—but was also dragged down in the fall. During this death-struggle, blows were mercilessly showered on him from behind: he received two very severe sabre cuts on the head, a violent contusion from the butt-end of a musket, by which he was stunned; and while thus helpless and prostrate, many other bayonet thrusts and sabre cuts were inflicted on various parts of his body, amounting in all to fifteen in number, though some, it is true, were very slight; but the injuries his head received on this occasion rendered him partially deaf for the remainder of his life. This occupied a much shorter time than it has taken to relate, and my brother was happily rescued from certain death by the arrival of the Admiral at the head of the rest of the boarders; the two vessels having again come into close contact. I have still in my possession the sword used by my gallant brother in this action. It is a heavy cavalry sabre, which had been the gift of an esteemed friend, and he is said to have slain with it five of his assailants. I have also the clothes that he wore on this occasion; they are pierced and cut in every direction, and perforated in one place by a musket-ball."

The Admiral so distinguished himself in this naval campaign that the people for whom he thus exposed himself and followers entertained some idea of paying him—not much—a compliment, which he thus receives:—

"We were sitting down to lunch on board the flagship," writes my informant, "when the officer of the watch reported that the Host was alongside." "The Host!" exclaimed the Admiral, "what

do you mean? Go,' added he—'go and see what it is.' By the time I got on deck about a dozen fellows with bare heads, dressed in ample black gowns, and each provided with a long tapering rod, were, as the soldiers say, 'falling in.' Two of the party carried a sort of large silver salver, on which was deposited something covered by a rich silk canopy. They desired to see the Admiral, and were accordingly shown into the cabin, where the latter was sitting at table. After marching round in procession, they halted behind him, and read a long address in Portuguese, of which few of us understood a single word. The canopy was now withdrawn, and the whole mystery disclosed: it contained a large and handsome wreath or crown of evergreens, which two of the black-robed gentlemen having raised, advanced towards the Admiral, with the evident intention of placing it on his head. He had up to this time behaved most admirably, and with all the dignity and gravity becoming his position, and that of the personage who had read him the long address; but when they proceeded to crown him with laurels, he could stand it no longer—he was like a bull shaking his head when an attempt is made to throw a rope over his horns. They next tried to talk him over—but it was all in vain. It has been truly said that there is but one step between the sublime and the ridiculous, and the whole scene had now assumed one of merriment. All semblance of gravity had disappeared on our part—the deputation, corporation, municipal authorities, or whatever the dozen 'gentlemen in black' might have been, looked at first much disconcerted, but joined eventually in the general laugh. The Admiral told them we were all heroes—to put the crown on the table, and that we would each have our share. This was done: he pulled out a sprig, which he placed in the buttonhole of his coat; we all followed his example—and the beautiful wreath soon became a complete wreck. The 'gentlemen in black'—apparently not half pleased with the result of their mission—then marched off, carrying with them the silken canopy and the salver—the Admiral jocosely observing, as they disappeared, that 'it would have been all very well if they'd only left us the piece of plate as well as the green leaves!'

As a disciplinarian, criticism might, perhaps, take the form celebrated in the case of Sir Roger's portrait, which was thought so closely to resemble the "Saracen's Head," when there was "much to be said on both sides." For example:—

"His idea as to the severity and frequency of flogging was, that, by being often beheld, it lost a great portion of its efficacy in point of warning and example; and that human nature is so constituted that custom makes us familiar with and indifferent to the sight of the most appalling punishments; and that when seamen are thus familiarized to such spectacles, they in some measure lose their terror, more particularly as—when the infliction is endured with fortitude—it is sure to elicit the approbation of their shipmates, who never fail to applaud the sufferer who has borne his punishment like a 'man.' Capt. Napier, on board the *Powerful*, endeavoured as much as possible to substitute other punishments for that of the lash; and justly thought that when ridicule, instead of sympathy was excited by punishment, it was likely to be attended with much more beneficial effects. One mode which I remember he adopted to effect this was, to have the neck of the culprit encased in a large wooden collar—such as is often placed on pigs, to prevent them from breaking through a fence—and make them in this ridiculous guise parade the quarter-deck for a certain number of hours, exposed to the jeers of his companions, who usually 'roasted' him well, when he was released from his uncomfortable and unseemly cravat. From the state of the political horizon at the time, Capt. Napier fully calculated on the probability of an approaching European war. He took every means to prepare for the event, by getting his ship into the highest state of discipline and fighting order, and took the greatest pains in the exercise of her guns, adopting, with his usual eccentricity, a system of his own to exemplify what might

happen in action, as men at the different guns were either disabled or killed. For this purpose when at general quarters, each lieutenant was provided with a basket of wads, which he occasionally threw indiscriminately at the men who were working the guns; and every man, on being struck by a wad, was supposed to be killed or wounded, and thus incapacitated from returning to his post. Such was Capt. Napier's plan for practising the men to take up quickly the places of their shipmates supposed to be killed or wounded, thus making the exercise appear like a real action; and he would often himself take a basket of wads, and kill or wound all those stationed at two or three guns, in order to see how quickly they could be re-manned from those adjacent to them."

From these extracts our readers will be enabled to gather a correct idea, we hope, of the biography compiled by the Major-General. It abounds in traits of character, of which we have afforded some sample, and there are details of love, marriage, and home-life which contrast very pleasantly with the more exciting scenes. The work is very honestly put together; without pretence, it accomplishes much; not adding considerably to the stock of our knowledge of the events of the Admiral's life, but bringing all the incidents together, so as to create a continuous story of great interest, with much that is amusing for the general, and more that is instructive to the professional reader.

Damascus and the Lebanon.—[*Damas et le Liban, Extraits du Journal d'un Voyage en Syrie au Printemps de 1860*]. (Jeffs.)

BUT a few weeks have elapsed since the Duc de Nemours congratulated himself that his nephews, the Comte de Paris and the Duc de Chartres, had been aroused by "the smell of powder" from beyond the Atlantic, to follow the instincts of their race and nation, by joining in the gigantic family quarrel which is raging among "brothers" in the States. Such a course, it was thought, if it had successful issues, might prove to their advantage on the recurrence of another revolutionary trouble in France.

Meanwhile, the elder of the two princes has left behind him, in Europe, a sample of his authorship, and a record of his experiences, "destined for a few persons only." This comes to us in the form of a volume of extracts from a journal of Eastern travel; and, like the Essayist who declared that he was never even dull without some design in it, this work has a meaning, and what the French call an "intention," in a political sense.

We must premise that it is printed for private circulation only; and though the British Museum possesses a copy, the name of the work, or that of His Royal Highness as the author, is not yet to be found in the Catalogue. How long this privacy will be maintained, it is difficult to say. Some hundreds—at least two hundred copies—have been exported to France, and freely admitted by the authorities, who were ignorant, at the time, of the name of the author. A second venture may not experience the same good fortune.

And yet, to all appearance, the volume is as harmless as the most despotic and fearful of governments could desire. The writer sets out by saying that "chance alone took him to the East," (*le hasard seul l'y avait amené*),—but His Royal Highness immediately explains what sort of chance it was, by adding that he went thither on purpose, as the only means available to him whereby he might gain some knowledge of his country, to which he is entirely devoted. "Thanks to his name and the memories of his family," the illustrious journalist was so cordially received by the Christian population, as to enable him to "learn all the extent of the

sympathy they bear for France, and the confidence which they place in her support."

Thus the book becomes, in fact, a "*Transaction*," and France is thereby informed how the grandson of Louis-Philippe is looking after French interests, and showing himself worthy of future consideration in any troubled time to come. The arrangement of the work is simple and its style effective. Under the heading "*Damascus*," the royal author shows up Turkey as effete, treacherous, powerless and cruel. Under the title of "*Lebanon*," he sets down his convictions that the Christian population is in every way superior to all co-existing races, and that these Christian communities will be annihilated if Europe do not interfere for their preservation. Subsequently, a European mediation assumes a useless aspect in the writer's eyes, and he thinks it would be very well if France took the principal—that is, of course, the sole—lead in the matter, and settled the vexed question by sending the "breath of her civilization" over the land, and, though as much is not expressed in so many words, making a French province of the mountains and the plains, and thus add another item to the glittering mass of Gallic glory.

This recommendation or suggestion is tantamount to a censure on the late Imperial policy which shrank from the task. The princely writer, or his Mentor for him, tacitly but significantly estimates that French interests in the East would not thus have been neglected had a son of Orleans been at the head of the humanizing bayonets of France. This is the sum of the whole book; and it will not fail to keep the writer's name on men's lips, and rescue it from the oblivion or indifference which is so perilous and unpleasant to pretenders.

The author sketches character well, describes scenery naturally and intelligibly, and rides a simile with the safety and assurance of a perfect horseman in that difficult branch of the art. He is skilful, too, in condensation, and in a few words conveys as much meaning as some writers could with difficulty express in as many pages. At his touch the desert burns, the city glows in the bright sunshine, the figures live and remain on the memory, and the reader feels the influences of the scene described, as if he were one of the travelling party. In short, nothing could well be more agreeable were it not for the conviction that, skilful and simple as it all seems, it is not a record made to keep up pleasant reminiscences, but a sort of professional testimonial, got up to indicate the author's fitness for future business when France may require him. And this is often done with some craft, as may be seen where the writer, exposing the venality and corruption of the Turkish administration, contrives to smartly hit those French Imperial ministers who have, to the amusing wonder of the people, realized such a vast amount of wealth as well as honour.

It is hardly necessary to say that the Comte de Paris has small respect for the four powers who, some twenty years ago, so thoroughly deceived M. Guizot, and, acting in spite of France, drove the Egyptians from Syria, and restored that province to Turkey. Since then the condition of Syria has been so aggravated that nothing can save the Christian tribes from the fury of the infidels, but a European intervention. The Prince closes his book with an expression of this conviction; but he can see nothing but failure in an intervention of several European powers combined, and the suggestion of the "breath" of France being alone employed in the work is clearly traceable in the final passage, in which the illustrious author says, that to attain the end in view "efficacious and even energetic means

must be employed, if necessary, and that Europe must not allow herself to be seduced by projects too ingenious to be practicable, nor to be stopped by respect for an authority which no longer exists but as a veil for assassination." In this form does the heir of Louis-Philippe recommend himself to the friendly consideration of his countrymen. The latter will probably think favourably of his views, as they undoubtedly ought of his merits as an author.

Forest Creatures. By Charles Boner. (Longman & Co.)

ALTHOUGH we prefer Mr. Boner's previous volume, 'Chamois Hunting in the Mountains of Bavaria and the Tyrol,' to the present, as being fuller of adventure and marked by more stirring interest, yet all sportsmen who desire or are addicted to the exciting sports to which Mr. Boner is devoted will find these pages sufficiently pleasing and practically serviceable to them. The Wild Boar, the Roe, the Stag, the Fallow Deer, the Capercaillie or Cock of the Wood, the Black Cock, and the Golden Eagle, all successively come before the reader and receive due disquisitions. How the Golden Eagle can be properly included as a forest creature is not perfectly apparent, seeing that he haunts quite other regions, as we shall presently note.

To the Stag Mr. Boner devotes his principal attention, and on all the natural knowledge which the pursuers of that noble animal acquire in the course of years of observation, the author is a clever discusser. The antlers, with their growth and points, and the slot which the stag leaves as its impression wherever it walks or runs, are very congenial to Mr. Boner's taste and talents. Whoever desires to be skilful in detecting the age and character of this beast, from the slots or footprints which he leaves as indications, will find help in these pages and in the four or five drawings on stone of what the stag has printed on the earth.

The chapter on the Golden Eagle, though brief as to the author's doings, is the most generally interesting in the volume, partly from the attraction of the subject itself, and partly because the author seems to take a flight upward with the royal bird, and to describe it in a style which reminds us of the graphic and graceful hyperbole of Christopher North when soaring in the same company. "Not one fowler in fifty thousand," says old Christopher, "has in all his days shot an eagle," and, we may add, not one man in fifty thousand, perhaps, has ever seen one in free flight—especially a golden eagle. Not gregarious, but moodily solitary, are these majestic birds. Like kings and queens, they keep apart from the common company of their fellows, and not being birds of a feather, they do not flock together. The eagle's haunt is not in the neighbourhood of the haunts of men. He chooses a rock for his eyrie, a rock suspended far above our pathways, and where no human eye beholds him. Scarcely ever, indeed, does a human eye behold him, unless while he is diminishing in aerial distance thousands of feet above us, and speeding his resistless way on mighty pinions, until he finally evades sight altogether, and enters clouds of dimness, or the sunlight that dazzles us, but not him. He has been seen higher still than the highest mountains of the Bernese Oberland,—for what are twelve or thirteen thousand feet to him, whose strong pinions sweep through the air like a rushing wind? Heights that human climbers can only, with extreme toil and daring, attain in hours this bird surmounts in minutes. He is on the summit while man looks towards it,

—and, in another minute, may be soaring immeasurably higher on his way to cloudiest heights, or to the far sea of deep blue ether, or the flaming neighbourhood of the sun!

The ease of his ascents is no less remarkable than their altitude. When it so pleases him, he can remain long and easily suspended as if without a single beat of his extended wings; or he can suddenly sail forward in a perfectly horizontal direction for more than a mile of distance, without apparently the slightest turn of his feathers,—his outspread wings then seeming rather like sails than wings, and he himself being upheld or borne along by the mere exercise of volition. How forceful the impetus he can then give himself! how strong yet how light the mechanism of his mighty frame! how majestic his calm and quiet buoyancy—how sudden his horizontal sail, instantaneously succeeding his upward flight! how sudden, too, his reversal and the immediate fall of the bird, like that of a rock, through the cloven air, when from a great height he voluntarily seeks the earth! Equally remarkable is the power he is declared to possess of instantaneously arresting himself while dropping through the air at a certain spot, with folded wings, even when descending from a height of 3,000 or 4,000 feet:—

"When circling so high up that he shows but as a dot, he will suddenly close both wings, and, falling like an aërolite, pass through the intervening space in a few seconds of time. With a burst his broad pinions are again unfolded; his downward progress is arrested, and he sweeps away horizontally, smoothly, and without effort. He has been seen to do this when carrying a sheep of twenty-six pounds' weight in his talons; and from so giddy a height that both the eagle and his booty were not larger than a sparrow. It was directly over a wall of rock in which the eyrie was built; and while the speck in the clouds was being examined, and doubts entertained as to the possibility of its being the eagle, down he came headlong, every instant increasing in size, when, in passing the precipice, out flew his mighty wings; the sheep was flung into the nest, and on the magnificent creature moved, calmly and unfurried, as a bark sails gently down the stream of a river."

No less powerful than the eagle's wing for flight is his organ for vision. What an eye is his, even as you gaze at it in the poor captive in his barred prison, where he sullenly disdains the hurrying, vulgar, staring crowd! He could outstare them all, if he were so disposed. He could look as steadily at them as at the sun, and a small ellipse of flame seems to be playing even now in the centre of that eye,—a flame that could at any moment flash out in burning anger, as it now glimmers dully in sleepy scorn. Set the bird free, and you shall for one moment see that eye kindle into its full lustre. Were it imbedded in yonder cloud, still it could penetrate far downward and upward, and discern what is doing or flying very far off. A mere fledgling eagle can descry its parent when high and far away, and will utter cries of welcome upon recognizing its provider as a mere speck wheeling like a circling point above. What, then, will not the parent recognize with his fierce, keen and piercing eye? Furnished with such powerful organs both of vision and motion, it might be thought that this bird would never want a meal, and that no prey could escape him. But his instincts and his fear of foes often prevent his descent and depredations, and so preserve the weak from his rapacity; for, dreading as he does the common populated earth, he will only carry off such objects as he can seize while sweeping by them. His familiar home is the air, his strange place the ground, and he will not descend to any spot below, unless he can quit it speedily by describing a curve as bold and sudden as that which brought him there.

An open field is essential to his warfare, and his prey must be fully or frequently exposed before he will attempt to secure it. He is royal even in his rapacity, and though his deeds are evil, he loves light rather than darkness. He comes down and returns like the whirlwind, ever rushing, never resting in his predatory visits. It is for other birds to settle and sing, it is for him to sweep and soar.

A certain Count Arco seems to be a notable eagle slayer and seeker, and a long yet attractive story of the ways in which the Count manages to shoot the male and female eagle, and to capture their eaglet in his nest, forms that portion of the book which will interest those who are not sportsmen. Having determined to shoot the parents first, and then to capture the coveted eaglet, the Count, albeit that he has thirteen of his own offspring in his own nest, set out with determination and daring in his heart to an estate thirty miles from the Lake of Constance. A regular siege was laid to the "Wand," or wall of rock, 400 or 500 feet high, in a recess of which the eyrie was built, and half way up which was a narrow chamois-path, sufficient for a good climber's progress. This was the nearest approach to the still-distant eyrie, and here the sportsman built a little bower of fir and pine branches. He occupied this post of observation at half-past one on a morning when there was such a hoar frost that he was almost frozen. At four the parent eagle returns homeward, and perching on a dead tree about 200 yards off, never ceases gazing at the Count for two full hours. Two painful hours are passed, the Count half frozen, and the eagle wanting to get home; but at last the bird spreads his large pinions, and with a single rush shoots away from the rock and disappears over the ridge. Five long hours pass away, and the Count is still at his post. Now a rush of wings announces the returning eagle, who, thinking to elude his enemy and feed his offspring, as yesterday, rushes past the eyrie flinging in the food, and then makes two quick strokes with his pinions, in hope of dropping, with folded wings, below. But the Count is prepared for him to-day, and aiming doubtfully without seeing him yet at the spot where he was expected, at last pulls the trigger at the moment when the bird rushes past the eyrie. This quick movement is successful, and down tumbles the great bird who for eight days had succeeded in feeding his young one and escaping his foe, though in ambush just below him.

And now how to get at the orphan eaglet is the next question. Ten woodcutters are set to work, and fourteen woodcutters carry up ladders and necessary tools to the half-way bower; the ascent of these ladders is thus described:—

"The first was so slender that it rocked with my weight very considerably, and I was glad when it was passed. When I now came to the perpendicular one, and saw the position of that at top, I cannot deny that as I mounted, I commended my soul to my Maker; but I was calm, and as full of confidence in the strength of my arms, and in my bodily activity, as though there was not the least danger present. The perpendicular ladder was now ascended. Although I had not the least giddiness whatever, I could not but see, on looking upwards, and then down below, that to mount the third ladder was a feat for a rope-dancer, rather than for any one else; and, thinking of my wife and thirteen children, I turned it over in my mind whether it would not be better to go back. Meanwhile, it occurred to me that as long as the upper part of the ladder did not project more outwards, it would, by reason of its own perpendicular weight, bear the weight of my body hanging backwards without toppling over. Trusting therefore to this, I now began to mount, my body hanging down.

and away from the ladder, which, as the men afterwards told me, was a really fearful sight. I now was at that part of the ladder where it leaned against the straggling branches of the eyrie, and had ten or twelve rounds still above me. I discovered that the eyrie instead of being two feet high, as we had supposed when viewing it from below, was composed of branches which had been accumulated by the eagles for years, and was nearly eight feet in height. The ladder was, therefore, about eight feet too short, in order to enable a person to step off it into the nest. What was to be done? To turn back was not at all to my taste, and the hope to be able at least to look into the eyrie carried the day. With all heed I mounted higher; putting my hands through the ladder and holding on by the branches of the eyrie, and with my feet pressing the ladder as closely as possible against it. I had now the last round of the ladder in my hand, but there was still five feet to the nest; so that I was obliged to trust all my weight to the branches that composed it. Boring my hands and arms as far as I could into the immense fabric of boughs and branches, I carefully tested them all till I found one that I could neither snap in two nor drag out: grasping this firmly, I thus got on the topmost round of the ladder—110 feet high; but even now I could only lean my chin firmly against a stick on the outermost edge of the nest, while with both arms I held fast on its surface."

The bold Count contrives to peep into the nest, and discovers that the young bird was sitting in the very hindermost corner, four feet away from him. The nest itself was a veritable carrion-pit, and disgusting when its odours came between the wind and the Count's nobility. He picks a long stick out of the nest and pokes the eaglet until the latter becomes furious and seizes the stick with his talons. Now his tormentor draws the stick towards himself, and with his right hand seizes the bird's back. The capture was not accomplished without great difficulty, and then, says the Count,—

"Victory having been achieved, I began to think of effecting an orderly retreat. So, with my right hand, I let my prisoner hang suspended behind me, in order that he might not incommode me while descending, and then tried to find the holes in the eyrie which I had bored with my hands when climbing up. This was a difficult and fatiguing affair, and lasted terribly long; because, my head being pressed close up against the side of the nest, I could see nothing, and was only able to feel my way with my hands and feet. The top of the uppermost ladder inclined backwards more and more as I descended, making full two feet at each round. It was only after a long search, and after snapping many a dry branch, that I succeeded in finding again the holes in the nest; but I found them at last, and thus, by care, perseverance, courage, and presence of mind, I descended the three ladders and came back again to my men; and, except that my hands were much torn by the brambles, quite unhurt. Those below believed that they had seen the accomplishment of an impossibility: and they confessed that several times they were unable to look up, so giddy had the sight made them. As long as I was standing on the ladder I was in a complete perspiration; so that literally the moisture ran down into my shoes; and, on coming below, I for a long time was unable to hold my hand and arm quiet, so much did they tremble from the great exertion. But now all was happily over, and the whole troop—those above as well as those below—burst forth into a loud and long 'Hurrah!' making the surrounding mountains re-echo with their shout. When the others came down and saw the ladders standing, they would not believe what they saw, and looked on the affair as miraculous. It was not a miracle; but I think myself that no eagle had ever been taken from an eyrie in like manner."

The tale is exciting enough in one way, and instructive enough in another, but it is not for us to point the moral. As for the eagle, he is hearty and comfortable enough at the Königs-See, placed opposite

a comrade taken from a nest on the Untersberg, by the Count, who let himself down to the spot by a rope. "Whoever would like to see them can do so and welcome." Another similar story is told of the same eagle-seeker, but its interest is inferior to the one already told. If to shoot old eagles and capture young ones be the noblest end of man's being and the highest use of his faculties, then Count Arco is noble by nature as well as by rank; and if to pursue and slay wild boars, roe, red deer, fallow-deer, and game birds be the reader's dearest wish and highest purpose, he will find Mr. Boner's book pleasant reading, while his concluding hints to sportsmen will be of service in the forest. They are those of a practised beast and bird pursuer.

A Compendious History of English Literature and of the English Language, from the Norman Conquest. With numerous Specimens. By G. L. Craik, LL.D. (Griffin, Bohn & Co.)

THE size of a book lies neither in bulk, weight, nor number of pages: but in the comparison of these with its subject. This little work, of not quite twelve hundred pages in all, treats a subject which is growing so fast, large as it is, that if only one in a hundred aspirants gains a first instalment of immortality, it must be doubled in less than fifty years. Dr. Craik has already written on this subject, in a smaller work known to many of our readers. This augmented effort will be, we doubt not, received with decided approbation by those who are entitled to judge, and studied with much profit by those who want to learn.

Encyclopædic works are, for different reasons, both early and late literary enterprises: at first because there were so few copies; at last because there are so many books. It was once a labour of love for the zealous friend of some local class of pupils, or even of some one pupil, to bring together the fruits of wide reading into a condensed manual: for the original works were scarce and scattered. The same thing is now done because the originals, no longer scarce nor scattered, require such a space as that under the dome of the Museum to bring them all together.

The first Englishman about whom we sought information at Dr. Craik's hands was his own founder: and we were rather disappointed at not discovering his name in the index. The earliest literary encyclopædist was an Englishman, Walter Burley by name: he died in 1337, aged sixty-two, and is said to have been tutor to Edward the Third. Brucker acknowledges the character we claim for him; and his book 'De Vitâ et Moribus Philosophorum' lived to be printed many times: there were at least twelve editions in the fifteenth century—the first as early as 1473—and nobody knows how many after. This work is indeed literary history, for we find among the philosophers Homer, Ovid, Horace, Demosthenes, &c. The book is not very big: one stamp would carry the edition which lies on our table, if half of one of the boards were torn off. For ourselves, we find that nothing sends us to a recent book with a keener appetite than a previous examination of the same kind of book as written before the revival of letters: we are thereby taught the meaning of "revival" to some purpose. For those of our readers who have the same taste,—and we doubt not that they are many,—we shall devote a few lines to Walter Burley.

It is fortunate for Dr. Craik that he lives in an age of more discriminating power in criticism than those which consigned Burley to literary oblivion with some expressions of contempt. Moreri discovers that Burley "n'avait

point de connoissance des belles lettres." Vossius convicts him of confounding Horace the poet with Horatius Pulvillus, Livius Andronicus with Livy the historian, Pliny the younger with Pliny the elder, and, worst of all, taking the poem 'De Vetula' for a genuine work of Ovid. Now as it is well known that the mistake about Ovid was the common property of the middle ages, the rational suspicion is that all the other mistakes were the same. Hence a peculiar value is stamped upon Burley's work: we see in it a mirror of the age. It is not likely that such errors were peculiar to the man; he being noted for learning, author of a vast number of works, a pupil and afterwards an opponent of Duns Scotus, and the friend and class-fellow of Occam. The critic should have read in Burley, not about Ovid and Pliny, but about the knowledge which the fourteenth century had of these classics: and he should have thought for a moment about the rate of progress, as indicated by the fact that Burley's book was keenly sought after, even in the sixteenth century, and was translated both into German and Italian.

It is true that the contents of our original history of literature provoke a smile. We take Homer for an instance. The greater part of a short article is occupied with an account of the poet's death, drawn from the first book of *Policratus*, to which we refer our readers. It seems to be doubtful whether the old man was killed by some fishermen because he could not answer a riddle, or whether he did justice on himself with a rope for the same crime. The fishermen, who, it seems, had sold their fish but had worms—for bait, no doubt—still about their persons, saw the poet looking up to heaven on the sea-shore, and laughed. When he saw this—for Burley seems to have been ignorant that he was blind,—he asked why, and was answered by the invitation to solve a deep question:—"What we took [fish] we have not; what we did not take [worms] we keep." Homer, says Burley, turned his thoughts towards the fish, and "cogitabat qualiter hoc esse potuisset, ut videlicet nondum captos pisces haberent, et captos pisces non haberent." And so he died as aforesaid. There is a family likeness in all rude ages: our readers will be reminded of Samson's riddle, and its deadly consequences. It would have been a very useful addition to Dr. Smith's Dictionary if to each name, Burley's account of the bearer had been appended as a comparison of our literature with that of the middle ages. And Dr. Craik would have augmented the value of a very valuable book if he had given us a plain view of those differences between our foregoers and ourselves which now provoke laughter. Not merely for fun, though we hold fun to be in itself a very good thing: but for increased perception of truth. We should make the same remark on Mr. Wright's *Biographia*, and on most other collections of the same kind. The grotesque element is either eliminated, or introduced in insufficient proportion. Herein, we admit, lies a great difficulty: the ever-recurring question of quantity out of mathematics and beyond measurement. Dr. Craik and ourselves are, no doubt, agreed about the necessity of making such introduction, so far as it is necessary for true history: but when premises are agreed upon, the *tantum* which answers to the *quantum* remains unanswered, and unanswerable. We may be biassed by love of amusement, and may slip in a larger allowance than logically follows, as did the writer of the song:—

True virtue lies in golden mean,
And man must wet his clay, Sir!
Join these two maxims, and 'tis seen
He should drink a bottle a day, Sir!

Dr. Craik, on the other hand, may be too much

restrained by that dreadful dry dignity in which historians delight. But this we know: that we never walk back into the old centuries without feeling that the guide-books do not fully show us the features of the country. Some of these features, indeed, the laws of decorum require to be softened in all cases, and entirely concealed from the young. But, all necessary exception made, there is a character which ought to be given, and which can only be given by specimens. Dr. Craik has much enhanced the value of his work by the specimens which are already in it: we suggest an augmentation of their number, and extension of their character, in the next edition.

The work consists of three distinct parts, intermixed: namely, the accounts of writers; the dissertations on points of language and literature; and the specimens aforesaid. On the first point, the length of the articles must vary excessively, from a few lines to hundreds of paragraphs. In this matter Walter Burley and Dr. Craik are quite at one: the first gives Eudoxus in three lines, and Seneca in thirty-three pages; the second gives Matthew of Westminster in three quarters of a page, and Chaucer in sixty-three pages. This is quite as it should be: there has been sometimes a tendency towards average length, cutting off space from the strong to add it to the weak. Of the dissertations we shall not speak: for each one is matter for an article. We prefer to catch a point or two from the mass before us, in every page of which we might find a question to ask, without blame to Dr. Craik: such is literature.

We observe, as before noted, that the specimens are perhaps fewer than they might be with advantage. This is a defect which will diminish in successive editions. We admit the distinctions which Dr. Craik has drawn between the humour of Jonson and of Shakspeare: but what a force would have been given by a short extract or two from the man of the learned sock. Perhaps a quotation from Bacon might be omitted, as not necessary even for the young student: but we cannot say the same of Hooker. Might we not suggest many points in which the learner expects a reasoned opinion? For example, Dr. Craik mentions Hallam's remark, that the authorized version of the Bible is not in the language of the time of James the First: that it is not the English of Raleigh or of Bacon. Here arises the question whether Raleigh and Bacon are the true expositors of the language of their time; and whether they were not rather the incipient promoters of a change which was successfully resisted by—among other things—the authorized version of the Testaments. We are not prepared to concede that we should have given to the English which would have been fashioned upon that of Bacon by imitators, such as they usually are, the admiration which is forced from us by Bacon's English from Bacon's pen. On this point we have a notable parallel. Samuel Johnson commands our admiration, at least in his matured style: but we nauseate his followers. It is an opinion of ours that the works of the leading writers of an age are seldom the proper specimens of the language of their day, when that language is in its state of progression. We judge of a language by the colloquial idiom of educated men: that is, we take this to be the best medium between the extreme cases of one who is ignorant of grammar and one who is perched upon a style. Dialogue is what we want to judge by, and plain dialogue: so we choose Robert Recorde and his pupil in the 'Castle of Knowledge,' written before 1556. When Dr. Robert gets into his altitudes of instruction, he differs from his own common phraseology as much as probably

did Bacon when he wrote morals and philosophy. But every now and then we come to a little plain talk about a common thing, of which we propose to show a specimen. Anything can be made to look old by such changes as *makes* into *maketh*, with a little old spelling. We shall convert these changes, using the newer form of inflexion, and the modern spelling; with no other variation whatever.—

"*Scholar*. Yet the reason of that is easy enough to be conceived, for when the day is at the longest the Sun must needs shine the more time, and so must it needs shine the less time when the day is at the shortest: this reason I have heard many men declare.—*Master*. That may well be called a crabbed reason, for it goes backward like a crab. The day makes not the Sun to shine, but the Sun shining makes the day. And so the length of the day makes not the Sun to shine long, neither the shortness of the day causes not [*sic*] the Sun to shine the lesser time, but contrariwise the long shining of the Sun makes the long day, and the short shining of the Sun makes the lesser day: else answer me what makes the days long or short?—*Scholar*. I have heard wise men say that Summer makes the long days, and Winter makes the long nights.—*Master*. They might have said more wisely, that long days make summer and short days make winter.—*Scholar*. Why, all that seems one thing to me.—*Master*. Is it all one to say, God made the earth, and the earth made God? Covetousness overcomes all men, and all men overcome covetousness?—*Scholar*. No, not so; for here the effect is turned to be the cause, and the agent is made the patient.—*Master*. So is it to say Summer makes long days, when you should say: Long days make summer.—*Scholar*. I perceive it now: but I was so blinded with the vulgar error, that if you had demanded of me further what did make the Summer, I had been like to have answered that green leaves do make summer; and the sooner by remembrance of an old saying that a year should come in which the summer should not be known but by the green leaves.—*Master*. Yet this saying does not import that green leaves do make summer, but that they betoken summer; so are they the sign and not the cause of summer."

We have taken a whole page of our author, without omission, that the reader may see that we do not pick out sentences convenient for our purpose. We have done nothing but alter the third person of the verb and the spelling: but great is the effect thereof. We say "the Sun shining makes the day": Recorde, "the Sonne shynynge maketh the daye." These points apart, we see a resemblance between our English and that of three hundred years ago, in the common talk of educated persons, which will allow us to affirm that the language of the authorized Bible must have been very close to that of its time. For we cannot admit that much change can have taken place in fifty years: and the language of the version represents both our common English and that of Recorde with very close approximation. Take sentences from Bacon and Raleigh, and it will be apparent that these writers will be held to differ from all three, Recorde, the version, and ourselves, by differences of the same character. But we speak of Recorde's conversation, and of our own. We conclude that it is the plain and almost colloquial character of the Authorized Version which distinguishes it from the English of Bacon and Raleigh, by approximating it to the common idiom of the time. If any one will cast an eye upon the letters of instruction written by Cecil and the Bishop of London to the translators themselves, or to the general directions sent to them in the King's name, he will find that these plain business compositions differ from the English of Bacon and Raleigh by the same sort of differences which distinguish the version itself.

Dr. Craik has worthily commenced a work which he can never lay down. A writer of

a mere history, a work of narrative annals, may end his task after the manner of Matthew Paris, who happened to finish in a year of jubilee (1250):—

Terminantur hic Matthæi
Chronica. Jam jubilæ
Anni dispensatio
Tempus spondet requiel.
Detur ergo quies ei
Hic, et cæli solio.

But the writer of an account of literature in our day must needs continue in harness: never knowing when the call for a new edition is to come. Such works as that before us would be an unmixed source of good, if it were not for a feature of our age the blame of which does not lie on authors. Few of our readers will seriously ponder what the examination system, as now conducted, is doing for—or rather against—the mind of the country. Such a book as Dr. Craik's will be seized with avidity by the school of *crammers*, who are engaged in converting education—the drawing forth of the faculties—into an induction of masses of knowledge too great for digestion. We live in a day in which boys, when examined in *English* history, are asked, because the Spaniards tried to invade England in 1588, for biographies of the principal Spanish authors who were then in existence. The time is not yet come for a struggle against this melancholy perversion of a good intent. We must wait until the increased frequency of epilepsy and other disorders among the young begins to attract the attention of philanthropists. Those who really know what education is are not strong enough to attempt anything with effect, on the side of intellect. In the mean time, if our young readers will give healthy perusal to Dr. Craik's work, they will greatly benefit by the wide and sound views which he has placed before them. But if they be compelled by the necessities of an approaching examination to gorge lists of chronicles, or metrical romances, or book-clubs, they will get no more harm from the work before us than they would have got from another.

NEW NOVELS.

The Cloister and the Hearth: a Tale of the Middle Ages. By Charles Reade. 4 vols. (Trübner & Co.)

WHATEVER Mr. Reade writes is sure to have some good substance in it—"plenty of weft," as weavers say. Mr. Reade never grudges his labour; indeed, he seems to love it for its own sake. In this present work he gives his readers plenty for their money,—and those who like to have a book which they may read in peace, without any prospect of coming too speedily to the end, and without any possible prevision of what the end will turn out to be, may here find a story to their mind. 'The Cloister and the Hearth' is full to overflowing of adventures of the most marvellous and heart-thrilling description, dangers so imminent and escapes so hair-breadth, that the reader will feel almost as nervous as if they had ended fatally. The time is in the middle of the fifteenth century; the scene is laid in many places, for there is a great deal of travelling both by land and water,—but Holland and Italy are the places where the people most concerned in the story transact the chief part of their affairs. The description of the little town of Tergou, in Holland, where Elias and Catherine, the father and mother of the hero, Gerard, reside, and the account of their domestic life, are like an old Flemish interior brought into action. Catherine, the kind-hearted, honest, prejudiced, thrifty housewife, with her harsh rind and tender core, is charming and life-like;—Elias, with his sternness, silence and love of justice, is equally good:—both are

true to their own nature, and look like a pair of portraits by Cranach. Mr. Reade has caught the spirit and colour of the age he has selected. In all the conversations, actions, manners and customs the reader is taken back to the everyday life of that age. It was the very eve of the Reformation; the printing-press had just become an accomplished fact, and was beginning to send abroad its first winged sheets. Luther was not born, but the time was fast ripening for his appearance. It is a period full of interest to us. We are familiar with it; and in Mr. Reade's pages it wears the kindly aspect of an old-remembered time, instead of being a stiff imitation of a bygone state of things. The characters are all warm; the descriptions are vivid; the tone of thought and the turn of speech are consistent and probable. The first volume is the best; there is more action—the story moves briskly: and the foundation of it is well laid, giving no indication of its future course.

The loves of Gerard and Margaret,—their danger,—the fatality that hinders their legal marriage when on the very steps of the altar,—their cruel separation,—the escape of Gerard,—are all told well and rapidly. The description of the German inn where Gerard takes refuge on the first night of his wandering has the air of being an interior drawn from the life; but the details are far more coarse than was necessary, and are enough to disgust fastidious readers:—there was not the least need to *préciser* all the horrors of the dirt and close confinement of an over-crowded lodging. There are touches of human kindness and good feeling put in which redeem them; but Mr. Reade might have done this, and yet left the other undone, with advantage.

As the story proceeds it begins to drag heavily. Mr. Reade is more anxious to show forth his own reading and research in the records of the life and times of the age than to attend to the business of the story. Indeed, his characters for awhile become mere pegs on which to hang the incidents he has gathered from books; and the pedantry spoils the interest. The knowledge he has obtained is not sufficiently assimilated; it is given too much as he found it, as though he had copied whole pages of an itinerary. Throughout the whole of the second volume the story stagnates. The style itself, being quaint and deliberate, aids this effect. From time to time the reader comes upon a flash of melodramatic adventure that quickens his interest; and these portions are effective, and well told; but though the danger incurred may be great, the reader, as he proceeds, feels sure that the escape is proportionately certain. There is an attack by robbers in an inn, which is really exciting; but when all is over, the reader pauses to observe that the bottle of phosphorus, with which Gerard smeared the face of the dead robber, and so scared back the surviving ruffians, is farfetched, and as improbable as that a traveller in these days should, if attacked by robbers, find himself provided with a complete photographing apparatus to take their likenesses, and so aid the police detective in his search after justice. Gerard's letter to Margaret is good, but far too long; it is however an excellent panorama of travel as performed in those days. The burning of the mill and destruction of the banditti is a fine piece of Surrey or Victoria Theatre melo-drama. The scenes where Margaret enters are the quietest and best in the work. Her reconciliation with the parents of Gerard has some true and touching traits. The plot of the two brothers of Gerard is well indicated, and it is all the more effective for being intimated, and not detailed. There are some good scenes in Gerard's life in

Rome, but all are too long, and want coherence. There is a drawl both in the style and in the story. We object to the effect produced on Gerard by the false tidings of Margaret's death,—it is arbitrary, and not in accordance with any previous indication; it is patched on, not developed from the character. The effect on the reader is painful, and does not impress him as true in any way. The recognition of Margaret is a strongly marked situation, but it is too violent; and the subsequent portion of the story drags painfully. The reader's sympathy is thoroughly excited for both Margaret and Gerard, from the force of circumstances; but Mr. Reade protracts this portion without judgment or mercy. The death of Margaret is very touching; and the intimation, given quite at the end, that this story is the history of the parents of the great Erasmus, gives the reader a sense of belief and reality in all that has gone before, which is highly satisfactory. In summing up our judgment on this work, we must say that it has many merits; but that there is a coarseness of workmanship which takes away both from the value of the story and the pleasure of the reader. The work contains materials enough for half-a-dozen ordinary novels; but they need a thorough supervision and compression to make the book as good as, with the labour and research bestowed to gather those materials together, it ought to be. We have not mentioned the character of Denys, the French soldier. He is amusing, and assists the story in important difficulties;—he, however, fades out of sight as though the author had forgotten him, or found him troublesome; and his re-appearance is contrary to any doctrine of chances. Readers will accept the novel, and read it, with omissions, according to the measure of their patience.

Joseph Alleine: his Companions and Times.

A Memorial of "Black Bartholomew," 1662.

By Charles Stanford. (Jackson & Hodder.)

IN this memoir of Joseph Alleine, the Taunton Puritan, Mr. Charles Stanford has committed two faults: he has written a book for which there was no need, and has, moreover, written it from a wrong point of view, and in a reprehensible spirit. In the first place, Joseph Alleine in no respect whatever merits especial notice at this date, the few particulars that may be learnt about him by a reference to well-known biographical collections being all that any intelligent person of the present day wants to know about him. That he was born in 1634, and died in 1688; that he was educated at Oxford, and for some time assisted as an officiating minister at the parish church of Taunton; that, in consequence of his refusal to consent to the Act of Uniformity, he was ejected from his post, and subsequently became the victim of vexatious prosecution and illegal imprisonment for discharging the functions of spiritual ministrations to his pious adherents; that he wrote 'Counsels and Cordials for the Converted' and other religious works, which have long since been forgotten; and that, after dying in his bed surrounded by friends, he was buried in the same church from which he had years before been ejected, are the main facts of Joseph Alleine's life of meritorious obscurity,—a life closely resembling the careers of hundreds of his own party, and hundreds of every religious sect into which the country was at that time divided. Mr. Charles Stanford adds nothing to the stock of information relating to this honest minister's career. Yet he writes a volume about him, the book being made up of extracts from registers, old newspapers, and those rather out of the

way, but by no means rare works, for which bookworms, in the milder and incipient stages of bibliomania, have invariably a strong affection. The consequence of this mode of treatment is that the reader of the memoir lays it aside with only a very vague notion as to the achievements of its subject. All the *known facts* are in the volume, but they are so buried in clippings from the author's commonplace books that they are, for any practical purpose, as good as lost. Into this fault Mr. Stanford has fallen, partly through measuring the knowledge of others by his own want of information. In sketching the life of a Non-conformist minister of Charles the Second's reign, he appears to labour under the misapprehension that he is dealing with a dark and unexplored period of history. But Mr. Stanford's worst fault is his narrowness. Sectarian prejudices and provincial predilections seem to have aided in contracting the range of his sympathies. For the persecutions exercised by the Puritans in their day of power he can find an abundance of palliative considerations, but for the persecutions endured by them he is at a loss how to express his abhorrence in sufficiently strong terms. Glancing at the treatment the University of Oxford received at the hands of the Parliament in the July of 1648, Mr. Stanford expresses his respect for the victims of military violence, "those stout Carolist doctors, with their romantic devotion to the King, their high chivalry, and their noble stand for conscience"; but he adds, "yet, if we admit the University to be a national institution, it will be difficult to show why the actual Government of the day, assuming it to be the organ of national opinion, and the grand executive of the national will, *should not have demanded its submission to Governmental authority.*" But this tolerant and charitable view of State action is no longer taken by Mr. Stanford when he comes to consider the Act of Uniformity and the ministers ejected by it. It was all well in "the actual Government of the day" to "demand submission to Governmental authority" when the recusants were nothing more than stout Carolist doctors, but for "the actual Government of the day" to eject Puritan preachers for refusing "submission to Governmental authority" was—religious persecution. "Norman and Alleine," says Mr. Stanford, "were as truly martyrs as were Ridley and Latimer. The only difference visible is this, that the two former were put to death by Romanists, the two latter by Protestants; the former died in a fire lighted by a torch—fire that wrapped the body in its waves, and did its work in an hour; the latter, in fire lighted by a legislative enactment,—the fire of sickness and sorrow that stung both body and soul—a slow, silent fire that lasted for years. Mr. Alleine's hour was not yet come; but, as Dr. Annesly said of him, 'it was impossible that anguish like his could continue long, and at last his sufferings for Christ hurried him to heaven in a fiery chariot.'" The delightful confusion of this passage, which represents Ridley and Latimer as dying a slow death under the persecution of a legal enactment, and Norman and Alleine as being burnt at the stake, is an example of the way in which Mr. Charles Stanford sometimes takes a lofty flight, only to drop suddenly down into a jungle of misconstruction. Writing in 1692, Samuel Annesly might be excused for adopting an exaggerated strain; but it sounds very droll coming from one of our own generation. It is pleasant to know that the ministers ejected by the Act of Uniformity had in their troubles the consolation of being able to mag-

nify themselves as martyrs for Christ's sake; but it is also certain that, if they were martyrs at all, their martyrdom was undergone for political rather than religious principles. The fact is, they were persecuted, just as their party persecuted in return when they had the chance, from considerations of State policy rather than spiritual doctrine. They lived in times when religion was identified with politics, each great party in the public dissensions having amongst their insignia a particular variety of opinion on matters ecclesiastical. The body of the public were still uneducated; and even for the few who could read there were no newspapers sufficiently powerful or well managed to instruct them on the course of public events. Under such circumstances, the country congregations took their political opinions in a great measure from the pulpit, and were satisfied or discontented with the existing order of things just as their pastors counselled them. When, therefore, revolution and counter-revolution brought first the one and then the other of the great parties to power, it was an object of the highest importance to the leaders of the dominant interest to take the ordinary organs of public intelligence out of the hands of their determined enemies. Their friends being known by one set of opinions and their antagonists by another, they required the holders of pulpits to adopt *pro tem.* their views, or to surrender their places to ministers better affected towards "the actual Government." As a rule, they made no very searching scrutiny when they met with the appearance of ready obedience. Men of lax, easy principles could trim their sails and go on smoothly with any party, like the Vicar of Bray. But men of another temper, like Joseph Alleine, stood true to their colours, and, on their party losing power, experienced all the discomforts of being uncompromising members of "the opposition," who refused "submission to Governmental authority."

Travelling Letters of Felix Mendelssohn-Bartholdy—[*Reise Briefe von Felix Mendelssohn-Bartholdy aus den Jahren 1830 bis 1832*]. (Leipsic, Mendelssohn; London, Dulau & Co.)

THE years which have elapsed since untimely death put an end to the career of the youngest of the great German musicians of the last century have brought with them no diminution of admiration for the artist, nor of affection for the man, so far as England is concerned.—We have not followed the example of Mendelssohn's countrymen, who began to disparage the value of him whom, when living, they had borne to the skies, almost ere he was cold in his grave; and many of whom compassionate our constancy as an amiable lunacy—one of the inconsistent and unphilosophical freaks by which the Briton earns an unenviable reputation on the Continent. The interest among the many, the affectionate recollection cherished among the few gathered round his name, have increased and intensified themselves with time and comparison. We have more and more clearly come to see how complete was the artist, how good and gifted the man. We regard his life as one of those few fortunate histories of merited success and healthy enjoyment which mankind have been permitted to read—an example delightful to regard and precious to hold up, to those about to breathe the feverish air and to thread the perplexed mazes of the world of Art. Such being our faith, our sympathies and our convictions, the desire has naturally been earnest and strong for some complete and copious record of a life so remarkable and so full of matter.

Generally, the great musicians of Germany have fared ill at the hands of their biographers. The lives of Bach, Handel, Gluck, Haydn, Mozart, Beethoven, hitherto executed, make up a library of weariness. Their writers have been contented to amass facts without studying those humours and characteristics of individual nature and society which are reflected on no artist more strongly than the musician, whether he be creative or executive. The other day, when Spohr's autobiography appeared, it was found mainly an egotistic record of his early labours and concert-tours. Weber's story, one full of vicissitude and interest, has still to be written.—Here the survivors of the youngest and brightest of the company of master-singers—unable, it would seem, to cope with the biography of one over few of whose words or days the slightest shade of reserve or concealment need have been thrown, and inattentive to the fact that much material of value is perishing as the generation of those who saw Mendelssohn's youth and his early manhood is rapidly passing away,—offer merely a few materials for some one to come. They are to blame, should a portrait so full of lights and traits be inefficiently painted by stranger hands who may one day attempt it,—should the real truth of a happy, virtuous, intellectual and glorious life be inefficiently told, and its high morals be so incompletely drawn out as to lose a portion of their authority and instructiveness.

What makes such reticence less explicable is the fact that the larger part of the delightful letters collected in this volume are written to Mendelssohn's father and mother, and his sisters Fanny and Rebecca—all gone!—To these he wrote with such perfect intimacy and unreserve that the happy household circle addressed is in part revealed to us by him. It is tantalizing, then, for the memorialist to have begun so late as with that Italian journey taken by him in 1830, which followed the previous year's visit to England,—an event to which he always recurred with delight, and which laid the foundation of affectionate friendships not yet closed, though their object is past the reach of human ministrations.—Why have withheld all details of his early years—beginning with his birth-time, 1809? He was not himself chary of adverting to the influences which formed his character, of recalling the many privileges of the happiest childhood ever lived by boy of genius. His parents were not of that commonplace order of persons in whose hands misconception, or suffering, or false indulgence is sure to be the lot of the gifted child. His mother, especially, a cordial, serene, accomplished lady, whose sympathies were given to all that is best and most honourable, and whose genial cultivation was accompanied by an absence of pretence or affectation, rare indeed in the keen and critical circles of the Prussian capital, was a person too sterling and too distinguished to be forgotten by any one who came within the circle of her hospitality.—Thanks, in no small part, to her calm sense and full appreciation of the rare nature intrusted to her for training, the education of the boy was as complete, yet as clear of anything like force or stimulus (or aught that goes to make that unhappy character, a prodigy), as education could be. In music, minutes with him did the work that hours hardly effect for those less happily organized. His hands were apt in no common degree. His memory was amazing in retentiveness. If a new player or singer crossed his way, if anything unfamiliar in form of composition came before him, he did not merely enjoy, he possessed it, there and then, and for ever. And in music he had the excitement of an affectionate playfellow, only one degree less

quick and brilliant than himself—his sister Fanny. He used to tell with infinite humour how, when Kalkbrenner passed through Berlin, and was prevailed on to improvise (which, in the good days of old, was held to be an essential part of every pianoforte-player's duty), the boy and girl were astounded by a wonderful and new left-hand passage, which seemed to them, indeed, a stroke of inspiration, and which they laboured with a merry rivalry to reproduce. The thing proved an "*Impromptu fait à loisir*," since the passage figures at the close of one of its player's most elaborate published works—his "*Effusio Musica*."

The harmless yet precious details of those early years, when the boy, as Shortreed said of Scott, was "making himself," being unaccountably withheld,—let us make the most of these bright records of the young man's travelling time, entered on when his character was formed, and the peculiar direction of his powers could no longer be mistaken.—The volume begins with a visit to Weimar, in 1830. The notices which they contain of the pleasures of the old Archimago of German literature, in the very last years of his life, are full of interest. Mendelssohn writes to his sister Fanny, with an artless vivacity, how the patriarch was charmed into sitting up till twelve o'clock at night to hear him play—how, resolved to make the utmost of his young guest, he commanded a sort of historical concert, at which he sat in a dark corner "like an old Jupiter Tonans, with his eyes flashing," while the pianist went on from master to master, winding up with an extract from Beethoven's *d minor* Symphony; which last the old poet digested with a certain reluctance.—It was a delight, writes Mendelssohn, to be with Goethe at table, he was so lively there, taking part in all that was passing,—or to hear him discourse on some engraving, or about 'Ernani' and De Lamartine's 'Elegies,' "or the theatre, or pretty girls!" It is evident that Goethe thoroughly enjoyed the vivacity and the versatility of his guest—and that touch of good-natured humour, so often misread by the stupid as sarcasm, which must needs belong to one so full of life and so keenly observant as Mendelssohn. The two, we fancy, met seldom after this visit, if ever again.

The next letters are dated from Munich, with bits of musical news, and a short song without words for Fanny—from Linz to his mother—from Presburg to his brother—then from Venice, the delights of which city, St. Mark's Place, and Titian's 'Assumption' and 'St. Peter Martyr'—made him forgive the horrid organ-playing. In truth there was little in Italy for any one to learn in the article of music. Decay had already got hold of the country. Italian opera was to be better heard in Paris and in London, than at home. The Sistine music at Rome, however, with its traditions, still held on;—and he noted the same minutely in his letters to his master, Zelter (the most exclusively devoted to musical subjects in the collection): but the influence of the land, which stirred the poetry within him, were those of scenery, buildings, pictures and Italian life. It is delightful to follow such a record of perfect happiness and genial activity of mind.—He loved to speak of those charming days in Italy, as of a happy gathering—time the preciousness of which no other course of experience could have superseded.—Yet, with the exception of his *A major* Symphony, some few pieces of Catholic music (among which his "*Ave Maria*" must be instanced—a work, up to this time, not decently performed in England), and a Gondola dream or two among his small pianoforte pieces,—there is small direct trace of Italian influence in Mendelssohn's writings.

He was essentially of the North, Northern. At Rome, he was mending his 'Hebriden' overture,—setting the 'Walpurgis Night' of Goethe—and however alive to the softness and glow of Italian colour, to the risings of the sun, and to the marvels of the moonlight—pondering for his own work of Art, that "Bad Weather" overture, which, among picture-music, is as definitely graphic as the "Storm" in 'The Pastoral Symphony' of Beethoven, or its writer's own wondrous bars of sea-prelude, broad and deep in their harmonious calm, to his 'Meerestille' overture.—Then, always in search for the opera-book, which never came during his lifetime, so as to enable him to plant his feet firmly on the boards of the theatre,—it is remarkable and characteristic that his fancies for what was weird and grotesque did not melt into some temporary dream of the Southern life and beauty which he enjoyed to his very heart's core. The notion of 'Shakespeare's 'Tempest' was always uppermost with him as an opera subject. Many years later when, in the course of the transactions of the manager of a London theatre, he was not only taken at his word, but compromised by announced engagements to which he had never assented, Mendelssohn may perhaps have found his mistake, and perceived how limited is the scope which Shakespeare's exquisite dream offers to music, unless the dream be vulgarized by such amplifications and intrusions as Scribe (that most adroit but unscrupulous of carpenters) forced into the story. But in Mendelssohn's early days, and in the time of his Italian harvest, when an opera was the question, his inquiry seems always to have been for 'The Tempest.'

The Paris Letters, dated 1831, which close the volume, are written in a less happy mood than those from Italy. Some of the shrewd remarks they contain would have been tempered had they been put on record some years later. It then became Mendelssohn's wish (to use his own phrase) to "reconcile himself" with Paris. There were treaties in consideration betwixt himself and the Grand Opéra for the great stage work which was never to come. But in 1831 there was apparently something antagonistic to him in the air of the French capital. Meyerbeer's 'Robert' pleased Meyerbeer's townsman little. Cherubini (no uncommon matter) was sharp and bitter, complaining that Beethoven's last compositions "made him sneeze." Ballot's Quartett was delightful to him, however.—The instantaneous change of mood on his touching English ground is curious and remarkable.

If we have discussed these Letters rather than offered extracts from them, it is because there is no link in the manner of their publication which connects them with the domestic and artistic life of their writer; and because every hint towards a biography now supplied may have future value as testimony. The volume is sure to be in the hands of every one who cares for Mendelssohn and for late German music—sure to be translated into every language; but it does not stand instead of a character and a picture. We suppose it may be followed by others; but the reserve of those who have put it forward is as strange as its reasons are hard to divine.

Eastbourne, and the Advantages which it possesses as a Resort for Invalids; with General Remarks upon Sea-Bathing, Sea-Air, and Exercise.
By Wm. Abbotts Smith, M.D., and Charles C. Hayman, M.D. (Stanford.)

THAT there may be no doubt as to the authorship of this brochure, the title-page announces in large letters the names of its joint-producers, and the Preface is subscribed in even more

imposing style by the authors—their respective addresses being placed beneath their signatures. Dr. Charles Hayman lives on the Grand Parade, Eastbourne; and William Abbotts Smith, M.D., resides at 38, Doughty Street, London, W.C. It is to be presumed from this juxtaposition of addresses, and from the style of their literary labours, that Dr. William Abbotts Smith, of Doughty Street, and Dr. Charles Hayman, of Eastbourne, "correspond," and do their best to forward each other's professional interests. When Dr. Moore's Wiltshire clothier went for change of scene and air from Bath to Bristol, he took in his pocket a note from a leading Bath physician, introducing him to a learned brother of the faculty, who sheared his sheep in the commercial town. Fortunately for the invalid, he on the road opened this note, and read that which was not intended for his eye. "Dear sir," ran the epistle, "the bearer is a fat Wiltshire clothier—make the most of him." We would not insinuate that letters of this brief and piquant character pass between Dr. Hayman and Dr. Smith; but it is not unfair to them to suppose that, when "a fat clothier," consulting the Eastbourne doctor, states his intention of proceeding to town, Dr. Hayman speaks a good word for the distinguished physician who resides at 38, Doughty Street, W.C.; and, in like manner, that when an invalid consulting Dr. Abbotts Smith expresses a wish for sea-air, the doctor says, persuasively, "You cannot do better than go to Eastbourne, and put yourself under the care of the celebrated Dr. Hayman."

It is often a difficult question to decide, whether a medical treatise, addressed by a physician to the general public, violates those rules of etiquette and decorum, on the jealous observance of which by its members the dignity of the medical profession greatly depends. There is, however, no doubt that the present work may be classed amongst "trade literature." A glance is enough to discern its nature. "Eastbourne," say the friendly doctors, "is the most healthy town in the kingdom." There is no place like Eastbourne for health. This announcement made, the learned teachers of their fellow men proceed to enumerate the diseases which will derive benefit from a residence in that pleasant town. Ague, asthma, bronchitis, influenza, cardiac affections, consumption, debility, dyspepsia and its concomitant affections, diseases of the eye, gout and rheumatism, nervous disorders, scrofula, and one or two other affections the names of which it would be unfit to transcribe in this page, will all be benefited by a residence at Eastbourne—under the superintendence of Dr. Hayman. Beyond this, the volume contains hardly anything that could not be learnt from an Eastbourne Guide Book or a Post-Office Directory. It has not a single quality that raises it above the ordinary rank of the trade circulars, sent round by those puffing druggists who endeavour to clothe their ignorance with allusions to Hippocrates and quotations from Humboldt's works. Under ordinary circumstances the correction of a professional indecorum is left to those journals which specially concern themselves with the affairs of the profession immediately affected; but unfortunately, as those journals do not usually enjoy a circulation amongst the general public, they are powerless to inflict adequate punishment on the offenders it is their duty to castigate. We feel, therefore, all the more bound to express our disapprobation of Drs. Charles Hayman and Abbotts Smith, whose conduct is likely to bring the noble profession of which they are members into contempt with the more intelligent classes of the community.

OUR LIBRARY TABLE.

History of Wesleyan Methodism. Vol. III. *Modern Methodism.* By George Smith. (Longman & Co.)—This volume completes a work of no common interest—henceforth belonging to every library of church history, as the account of Wesleyan Methodism carried up to the present time, and sanctioned by the members of the sect. It must have been found more difficult to write than the two preceding volumes;—since controversies and schisms, belonging to a period during which the historian has been living, can hardly be treated with unshaken steadiness of hand and calmness of temper. Mr. Smith, however, on the whole, is meritoriously free from partisan heat;—and tells the story of difficulties which will recur to the end of time, so long as private judgment and private ambition stir humanity, with a moderation greatly to be commended.—He is confident in the future of Methodism, and in the solidity of the basis on which it rests, to an extent which some of his readers will not reach; but he would not, perhaps, have been fit for his task of delegated historian had it been otherwise.

Memorials of the Rev. Joseph Sortain, B.A., &c. By B. M. Sortain. (Nisbet & Co.)—Mr. Sortain, as a persuasive and eloquent pulpit orator, was known, beloved and followed in his lifetime by persons of many different creeds and humours. We believe him to have been a conscientious and earnest man, who preached well because he was convinced that it was his vocation to preach.—It is but natural, then, that his relict should have felt it a duty, and found it a melancholy pleasure to offer a memorial of one so popular and so influential; but she has fallen into an error too common in such cases. From his early youth, her husband kept a record of his spiritual misgivings and experiences, one too intimate and personal to be published with any profit. There may be something morbid in the perpetual resolution to write down symptoms; if not, the cases are rare in which the confessions of a tender and earnest spirit, doubtful and self-discouraged because of its purity of feeling and loftiness of aim, should be revealed to general perusal. This, we know, is not the prevailing taste or fancy of the biographers of religious men; for ourselves, however, the veil is too frequently lifted. In their diaries, again, how many men are scrupulously true to themselves, or do not write with some intention or covert hope that one day the eye of some sympathizing friend will peruse the tale of their struggles and sorrows? If it be so, the record must become more or less unreal. In Mr. Sortain's case, there is nothing of mark which will make his early day-books interesting or useful to other students who have a vocation to preach.—He was a good man, whose life and power were in his sermons.—Of these we have few notes. The book, in short (though prompted by wholesome and devout affection), is a poor contribution to the literature of the modern pulpit.

General and Descriptive Anatomy of the Domestic Animals. By John Gamgee and James Law. With numerous Illustrations. (Edinburgh, Jack.)—Veterinary education, which has no existence in Ireland, and seems here to need the aid of subsidies for its prosperity, is vigorous enough in Edinburgh. They have no veterinary college in Dublin—a fact to which the profession and its clients there appear to have only just awakened. At Camden Town we have the Royal Veterinary College, with Principal and Professors of great ability and reputation, who annually equip a considerable body of students, by the aid, among others, of the Royal Agricultural Society of England. In the northern capital, however, both old and "new" veterinary colleges are prosperous and vigorous, though not endowed or subsidized, or helped by aught but the ability and energy of their teachers and professors. Competition proves in their case as efficient a guarantee for industry and activity, and, therefore, for success, as wealthy patronage or endowments prove elsewhere. Of both industry and ability we have a remarkable illustration in the literary as well as the more strictly professional labours of Mr. Gamgee, the Principal of the younger veterinary institution. A new 'Monthly

Veterinary Record'—a 'Veterinarian's Vade-Mecum'—a book 'On Dairy Stock'—and 'Our Domestic Animals in Health and Disease'—all from the same pen, have appeared during the past twelve months; and the book entitled above is now issued, as a student's text-book of its subject, just as the winter classes of veterinary students are about to meet. The book is very fully illustrated with drawings. The first part, on general anatomy, relates in great detail to the various animal tissues; the second part—descriptive anatomy—is confined to the osseous system, which is very fully described in the cases of the different domestic animals. The work ought to have been provided with index and table of contents. Unfortunately for its usefulness as a book of reference, it has neither.

The Spirit of the Hebrew Poetry. By Isaac Taylor. (Bell & Daldy.)—It is the religious spirit which is here illustrated: and the work is, therefore, not easily to be treated of at length by us. The whole is aimed at the religion of our age by Mr. Taylor, who thinks, and even says, that all departure from the theological phraseology of the Hebrew poets is almost always a step towards atheism. Mr. Isaac Taylor rides his hobby for the time being as if he had never ridden another; and David and Isaiah are the indispensable guides of all theistic thought. Those who feel inclined towards the subject will find in this work a worthy accompaniment to the others of the same author. And those who, with him, are disposed towards the idea that Hebrew poetry will be an effective opponent of the rationalizing spirit of the day, will find all the arguments of their case, and many forcibly put. For ourselves, we are strongly inclined to suspect that the theism of the Hebrew poetry is precisely the part of the Bible which has nothing to fear from rationalism; but we must not go into the argument.

True Blue; or, the Life and Adventures of a British Seaman of the Old School. By William H. G. Kingston. (Griffith & Farran.)—In this latest and most ambitious production of his pen, Mr. Kingston by no means sustains his reputation as a writer of children's stories. 'True Blue'—for so the hero of the story is named—is a sailor in the navy, who, born at sea during a storm, and reared to manhood on the salt waves, in due course fulfils Mr. Kingston's ideal of the British tar. Brave, modest, simple-hearted, vivacious and religious, True Blue is equally ready to fight a Frenchman, to blush at hearing his own praise, to refuse the proffered promotion that would put him over the heads of his mates, to dance a hornpipe, and to say his prayers. But exemplary character though he be, Mr. True Blue will not win the hearts of juvenile readers. His achievements are not those of "honest Jack." The positions in which he is placed are sometimes ridiculous from their unfitness or impossibility; and even when he is represented as pursuing a not improbable course of action, the narrative still wants that tone of reality which ought to characterize children's sea-stories. But what Mr. Kingston lacks in quality he makes up in quantity. Even a purchaser may make a bad bargain by getting too much for his money. 'True Blue' is such an interminable yarn, that no child endowed with only ordinary patience will get through its pages. It might perhaps prove agreeable reading to some of the old pensioners at Greenwich Hospital.

The Stokesley Secret. By the Author of 'The Hair of Redclyffe,' &c. (Mozley.)—One of Miss Yonge's famous family histories, containing as many little boys and girls as 'The Daisy Chain.' It is rather confusing and difficult at first to distinguish one of the nine young Merrifields from the other, but they grow upon us by degrees, and their various characteristics stand out clear and distinct towards the end of the book. There is something very natural and true in the picture of school-room life: the little naughtinesses, the petty teasings, the small vexations, will be familiar to every member of a large family party. Miss Fosbrook, the young governess, is a delightful personage, and we heartily wish she could serve as a model for all governesses. Capt. Merrifield, the rough sailor-father, and the overworked, delicate

mother are supposed to be absent in London, having left their nine children in the charge of the new governess. Sam and Hal, great boys of twelve or thereabouts, are at first inclined to rebel against her authority; but, with perfect good humour and quiet firmness, Miss Fosbrook at once takes the upper hand, and the boys, admiring her courage, or "pluck," as they call it, are compelled to submit, in spite of themselves and of all their ancient prejudices against governesses and "London-bred young ladies." There is a good, rough, honest, unselfish girl, called Susan, "a good deal like a nice comfortable apricot in a sunny place, or a good, respectable Alderney cow,"—and a tiresome, whining, peevish girl, called Bessie, who is in a fair way to grow up "une femme incomprise,"—and a sturdy, impulsive, single-minded boy, called David, who is, surely, supernaturally forward for five years old,—and a naughty little boy, called Johnnie, and ever so many more children in the background. The great secret is this: a poor widow wants a pig to help to pay her rent, and the young Merrifields agree to save up their money and buy her one; and for all sorts of little crimes and misdemeanors fines are exacted in the Stokesley school-room, and the struggle to escape fines and to resist the temptation of spending the small weekly allowance in other things brings out the character of each individual child in many unexpected ways. Those who seemed at first sight the most pleasing, prove selfish, deceitful and weak; those who are rough and surly, come out of the trial honest, kind and true. Bessie bears a real misfortune bravely and well, and the rest see her true value and cease tormenting her for her finery and affectation. Though she is Miss Fosbrook's favourite, however, and is evidently intended to be the *prima donna* in a small way, we must own Bessie rather provokes us with her sentiment and "love of refinement," and, in real life, it would require a vast deal of snubbing to make her an agreeable child, or to turn her eventually into a sensible woman. There is much interest maintained throughout the whole story, and the catastrophe is almost affecting in its pathos. There is a good deal of fun sprinkled up and down in the course of conversation. Little David, a juvenile political economist, anxiously inquires, "'How can a pig pay the rent?'"—'I'll tell you, Davy, man,' began Henry; 'the pig is a very sagacious animal, especially in Hampshire, and so he smells out wherever the bags of money are sown, underground, and digs them up with his nose. Then, he swings them on his back and gives a curl of his tail and a wink of his eye, and lays them down, just before the landlord's feet; and he's so cunning that not an inch will he budge till he's got his receipt, with a stamp upon it, on his snout.'" This is Hal's version of the case; but, of course, the governess explains it all correctly afterwards. To add to the merit of the book, there is a very clever frontispiece of a tribe of little pigs and their mother, etched by J. B.

The Soldier's Sorrow: a Tale of True Love. (Houlston & Wright.)—A foolish little book, professing to be the work of "an admirer of soldiers," and "affectionately inscribed" to a Captain E. It opens in the true G. P. R. James style, with a dark and stormy night, torrents of rain, claps of thunder, &c., and "a horseman might have been seen wending his lonely way," when he "was startled by a slight noise, which seemed to proceed a few paces from him; clapping his hand on his belt, he drew forth a pistol," (in these sort of books people always carry pistols about them!), "exclaiming 'come on, my brave fellows, I'm quite prepared for a visit!'" However, there were no robbers to be seen, but only a beautiful young lady, of noble birth, who was lying by the roadside, having been dropped out of a runaway carriage and lost in the dark. Of course she is soon wrapped in the horseman's travelling cloak (he was so sure to wear a great travelling cloak out riding!), and carried before him on his "steed" to Nifton Hall, a modern country-house, where the young ladies put the fair unknown to bed, while the reader is entertained with "a slight sketch of the Raieley family." The next morning Constance Raieley goes to visit her patient, and the following specimen of polite con-

versation ensues between them:—"I wish you would call me Emily," says the interesting visitor.—'I will, on one condition.'—'What is it?'—'That you will call me by my Christian name.'—'Oh! but you are so tall; I don't think I dare.'—'Then, I am sure, I dare not you.'—'Now, you are making fun of me!'—'Well, if you won't promise to call me Emily, I shall not tell you my other name, and then you will be obliged to.'—'If people can not take the trouble to write sense, they might at all events try to write English before they launch into authorship. The end of the story is worthy of the commencement. Alfred Raieley goes into the army, and is desperately in love with Emily Clifford, who returns his affection, but is not allowed to marry him. He goes to the Crimea, believing her false, and Emily runs away from home one day, and turns up at the Battle of the Alma. She finds her lover dying of his wounds under an oak-tree by the river-side. An explanation ensues, forgivenesses are exchanged, and they are seen by one passer-by, some time afterwards, lying dead in each other's arms. We fear it will require a person to be a very ardent "admirer of soldiers" in order to appreciate this "tale of true love."

Snatches of Song. By W. S. Passmore. (Richardson & Son.)—Mr. Passmore, in a modest preface, states that his effusions "neither profess to dive to any profound depths, or to soar to any exalted heights of thought or fancy; they are simply a gathering of songs and ballads." They are songs and ballads which might have done for music, but which we cannot recommend for perusal.

The End of the World and of Rameau's Nephew—[*Le Fin, &c.*, par M. Jules Janin.] (Paris, Hetzel.)—It is possible that this book may be very clever. It is not unlikely that it may contain portions of other books, or favourite passages from past criticisms by its writer.—But it is necessary, for safety's sake, to speak dubiously—since to keep the attention to its pages and to ascertain the writer's drift are tasks of no common difficulty. This is not the first volume of heavy light reading under which we have suffered from the hands of the author of 'L'Anée Mort,' and the adapter of 'Clarissa Harlowe.' The profound impression of ponderosity made by a hysterical Christmas book, some dozen years ago, recurs to us as we write; but this 'End of the World' is more unreadable still.

Of publications of a religious nature we have to notice:—*Notes on the Epistle to the Hebrews, with Analysis and Brief Paraphrase*, by the Rev. E. H. Knowles (Rivingtons).—*A Critical Examination of the 'Essays and Reviews'*, by an American Layman, edited by the Dean of Carlisle (Hatchard).—*Tracts for the Thoughtful on Matters relating to the Religious Condition of the Age*.—1. *The Strife of Sects* (Simpkin).—*An Examination of what Roman Catholics really Believe on their Own Showing; being a Conversation occasioned by the Rev. W. H. Anderson's Tract, entitled 'What do Catholics really Believe?'* edited by a Clergyman of the United Church of England and Ireland (Hodges, Smith & Co.).—*Sabbath Evening Readings on the New Testament: St. James, St. Peter, St. John, St. Jude*, by the Rev. J. Cumming, D.D. (Hall, Virtue & Co.).—*England the Remnant of Judah and the Israel of Ephraim*, by the Rev. F. R. A. Grover (Rivingtons).—*Voices from Heaven to the Sojourners upon Earth: a Sermon*, by the Rev. A. B. Evans (Skeffington).—*Milton's Prophecy of 'Essays and Reviews,' and his Judgment of Prosecution of Them*, extracted from the 'Areopagitica, a Speech to the Parliament of England for the Liberty of Unlicensed Printing,' to which is added, an extract from the Charge delivered to his Clergy by the Bishop of Salisbury, on 'Unity with the Bishop of Rome' (Westerton).—*Sunday Cab-Driving: an Essay*, by J. Cockram (Seely),—and the First and Second Series of *The Pilgrim's Staff and Christian's Daily Walk*, by Henry Smith (Houlston & Wright).

LIST OF NEW BOOKS.

Addison's Crow's Nest Farm, cr. 8vo. 10s. 6d. cl.
Ahn's New Method of Learning French, Second Course, 1s. 6d. cl.
Archbold's Criminal Statutes, with Notes, &c., 12mo. 21s. cl.
Armstrong's The Frigate and the Lugger, 3 vols. cr. 8vo. 31s. 6d. cl.
Beaumont's Concise Grammar of the Arabic Language, 12mo. 7s. cl.
Bell's Aunt Alice, 12mo. 2s. 6d. cl.
Bohn's Eng. Gent's Lib., Walpole's Correspondence, Vol. 8, 9s. cl.

Bohn's Stand. Lib. 'Heine's Poems, transl. by Bowring,' 3s. 6d. cl.
 Broad Shadwell, Life's Pathway, 12mo. 5s. cl.
 Brown (Alex.), Memorials of, by his Father, or. 8vo. 5s. cl.

 Watson's Life of Sir William Wallace, Henry the Minstrel, 10s. 6d.

APPROACHES TO THE INTERNATIONAL EXHIBITION.

If we take a map of the western and south-western part of London and examine the character and disposition of the streets leading to the great centre of attraction at South Kensington, we shall find the prospect of the future anything but pleasant to those who do not like to be stopped by a "block" of carriages from their journey's end, be that end business or pleasure. The closer we examine the approaches in question, the worse the matter seems, and the absolute need of something being done with all speed becomes obvious. It is no use attempting to disguise the fact—there is but one tolerable approach to the Great Building, that past Hyde Park Corner, along the Kensington Road and down the Exhibition Road. Even this is subject to the terrible "narrows" of Knightsbridge between William Street and Wilton Place, where the going and the coming crowds will meet in indescribable confusion. Moreover, this route is out of the way, and can only be used, to any advantage, as a return-path for carriages, subject to the inconvenient gorge above named.

The main route for visitors will, unquestionably, be that by the top of Sloane Street, and down the Brompton Road. Here the narrows of Knightsbridge, as, for distinction sake, we shall call the perilous passage just referred to, having been passed in safety, the traveller comes upon a tortuous roadway, in few parts more than 80 or 90 feet wide; as it stands at present, irregular, crowded with loitering foot-passengers, the pavement encumbered with cheap and dirty book-stalls, multitudes of baths of every imaginable use and form, stalls of vegetables and fruit, flaunting streamers of cotton prints, here and there a costermonger's barrow, and almost invariably a heap of stones for mending the road, to say nothing of the muddy deltas our ingenious scavengers construct in the kennels with Nilotic bars of cabbage-stalks and straw. Now, a space of 80 or 90 feet may suffice for the display of the "Little Dustpan," or even of the glories of "The Golden Tea-Kettle," and "Commerce House" may flaunt its splendours therein at will; but really this small western imitation of the Mile End Road is not the best and handsomest face that might be put upon the greatest and most important approach to our International Exhibition Building. Thus much for the appearance of this dubious spot. Against its convenience as a means of access there is much to be said. It is as irregular in width as it is tortuous: here a wide, and if unencumbered, handsome foot-way enough will be found, but elsewhere this is

suddenly pinched in by some bold shop front that has started out from the house it belongs to, and covered the "front garden" of its original suburban days. At the corner of New Street this occurs, after which, going westwards, we navigate an encumbered footway that gradually closes itself in to about fifteen feet wide as far as Yeoman's Row, and then as suddenly opens again at Michael's Place. The roadway needs widening all along this space, and this might be done at small cost if a portion of the gardens on the north side were appropriated. We learn with great satisfaction that the owner of thirty-six houses on this spot is willing to give up his ground, and that action will be taken by the Kensington Vestry in a short time upon the subject. It is time such was done. The footway on the north side of this road needs repair—widening and straightening. Just before we come to Brompton Square a projecting shop needs to be set back a few feet, which with the alteration of the roadway would secure a handsome entrance at a small expense in this portion of the Brompton Road.

It may be presumed that an immense deal of traffic will find its way through Eaton Square; and here again a handsome roadway is spoilt by a few small but obtrusive shops, which abut upon the very footpath. The road is nipped in at the end of Westbourne Street, after traversing Eaton Square, with its gardens on either hand. A few years ago fire destroyed one of the impediments at this spot, and it has not been rebuilt. The opening is 22 feet from house to house (!), to widen which it would be only needful to set back three shops on the north side, which, as there are no houses above them, might be done at the cost of about 1,000*l.*, half of which, we believe, the Metropolitan Board of Works would be willing to expend if the parish would supply the remainder:—a thing very much to its interest, and we believe fully in the feeling of the Chelsea Vestry, which deserves great credit for its successful negotiation with Government to obtain space for widening the eastern portion of the King's Road, now in progress. The parish of Chelsea, having its main eastward approach therein, is deeply interested in the improvements so imperatively demanded in the Brompton Road, seeing that the immensely enhanced value of the land at South Kensington cannot but affect that of the property in the neighbouring parish. We look to see the small-housed and squalid district south of the Fulham Road rebuilt, with residences of larger rate-producing power.

Before we leave the consideration of these eastern approaches, we may take leave to point out a new route which would, at a comparatively small expense, make an opening into the whole district of South Kensington, Chelsea and Brompton, affording an opportunity of constructing a handsome street of first-class houses over an open space of market-garden behind Hans Place. By opening a roadway from Sloane Street, on the west side, immediately opposite Pont Street, across the vacant space of market ground, in a direct western line until it reached June Street, in a line with the opening of Ovington Square, a broad route would be obtained, giving access at once from Belgravia into South Kensington, Chelsea and Brompton, with the advantage of utilizing a now waste space in a quarter where house property is rapidly rising in value. The traffic might proceed along this route from the westward towards Piccadilly, and, traversing Pont Street, Belgrave Square and Halkin Street, into Grosvenor Place, would reach Hyde Park Corner, where a most desirable improvement, indeed, one of more importance than the westward extension just proposed, might be made by making a short carriage-way where is an ascending foot-path at present, opposite the end of Halkin Street in Grosvenor Place. Let a short tunnel be made at this point, under the extreme north-western end of the Queen's Gardens, opening on a rising gradient to Constitution Hill, where a roadway might cross on the level, and be carried in a direct line to Piccadilly, immediately opposite to the southern end of Park Lane. If it were thought not desirable to have a tunnel here, an open roadway in the same position would not cut

off more than a quarter of an acre, at the utmost, of the Queen's Gardens, in a neglected corner of no great value. Her Majesty has ever shown so great a willingness to add to the accommodation of the public in these matters, that we feel sure her consent has but to be asked. The cost of this immense improvement could not amount to many thousands; and, if such energetic contractors as Messrs. Kelk & Lucas undertook its formation, there is no doubt whatever but it might be ready for public use long before May next. The carrying out our last suggestion would furnish an escape from the dangers of the crossing at Apsley House, where, even in ordinary seasons, there is always great confusion and risk, the latter especially to foot-passengers. The adoption of the first proposition would settle the question of widening the Brompton Road as well as the Knightsbridge Road (at Albert Gate), and take the traffic by a handsome and wide route from South Kensington, &c. to Piccadilly. Now, or at a convenient time, by setting back the railings of Ovington Square and removing some out-houses standing at the corner of the Brompton Road, the last erections being of very little value, a wide entry might be made in this direction.

How the inhabitants of Tyburnia, Bayswater, Paddington and St. John's Wood are to get to the Great Exhibition seems at present left entirely to their own discretion in choosing Kensington or Park Lane, either of which is simply two miles round about, taking the northern end of the Serpentine for a centre. For years, complaints and remonstrances have been made upon the want of a carriage-road across Hyde Park: and, when we consider the accommodation afforded by the former passage, we cannot call it a street, with its turnings and varying levels, it will be easy to imagine what these remonstrances will become next year. Park Lane is a mere gorge of the most dangerous order. Either of these eastern approaches will but precipitate the north-western traffic upon the already over-crowded Knightsbridge and Brompton Roads. Kensington Turnpike, a nuisance that ought to have been long ago removed, lies like a lion in the path for vehicles coming by Kensington. The long-continued outcry might be satisfied, and a great boon conferred upon the public, by the construction of a road from Kensington Gore northwards to the angle of Kensington Gardens, where it might pass under Rotten Row by an elevation of the latter to no greater extent than 5 feet, owing to the difference of level between the Kensington Road and the famous ride itself. This would be no disfigurement to the Park or the Gardens. Between the carriage-way now existing, which leads to the bridge over the Serpentine, there is a deep and exceedingly useless ha-ha: let this be utilized for the new road, so that the vehicles traversing it would not be seen from the general level of the Park or Gardens. It would be a handsome road, shaded with fine trees,—indeed, such a one as does not exist for general use in all London. Let the Serpentine be crossed by a bridge in juxtaposition to that now existing, but on a lower level; continue the road proposed in the ha-ha on the north side, cutting off the projecting bastions of the Gardens, and carry it on in a straight line northwards to Victoria Gate, where a fine entrance already exists, or following the course of the ha-ha to Buck Hill Gate, let it debouch over against the south end of Westbourne Terrace, which constitutes in itself a splendid feeder from the extreme north-western parts of London, or by its broad branch on the east, called the Grand Junction Road, would draw to this new route all the enormous traffic of the Edgware Road, St. John's Wood, Marylebone Road, Euston Road, even from utmost Islington, Holloway and the thickly settled districts in that quarter. All the north, north-eastern and north-western parts of London would be thus accommodated, and their traffic find its way to the Exhibition by the Exhibition Road, the least crowded of the nearer means of access. If this be not done, a glance at the map will show that these crowds must inevitably come by the Kensington and the Brompton Road, and render the confusion there worse confounded.

It is understood that the Commissioners of the Woods and Forests are in favour of opening the ends of the middle walk in Kensington Gardens, which passes equidistant from the Serpentine and the Round Pound in a straight line, across Rotten Row to the Kensington Road on the south side. If this plan be adopted a new gate will have to be made, and the entrance will not be opposite to any road on the south, but almost midway between Exhibition Road and Prince Albert Road. At the north end of this proposed road there is no opposed road going east or west, but an awkward right angle would be formed by all vehicles entering the Uxbridge Road. To say nothing of these objections, the strictly north and south direction of this road would be in itself a fatal error, seeing that the main direction of the traffic, not only during the Exhibition, but at all times, is from north-east to south-west, and *vice versa*: that is, directly between the largest masses of habitations respectively so situated. The number of inhabitants on the direct west of the officially proposed route, who might be benefited by the direct north and south line of the road, is not a fiftieth part of those whose convenience would be subverted by leading it in the direction we have proposed. Neither Kensington Gardens nor the Park would be affected in an appreciable degree by our plan, while that last described would ruin the former, without making so pleasant a tree-shaded track.

Our readers will see the peril of Kensington turnpike when they learn that the great railway companies are even now constructing a large station at the point where the West London Railway crosses the Kensington-road. Here the multitudes, coming from north, south, east and west, will be deposited from monster trains, and by an arrangement not needful to enter upon here, and the visitors must find their way as best they can to the Exhibition Building. What hundreds will take care, and how the narrow pass to the east and west of Kensington Church will be beset, we need not say; how the now crowded flagged ways will hold the jostling country-folks eager for the sight any one can guess. Something ought to be done here, but to do it by direct means is quite hopeless. Happily, a far better plan may be proposed, which is to allow a company to lay down a double horse-tramway from the station along the already existing roads to the Earl's Court Road, and then entering the open fields, either direct, or by widening the old footpaths to the Gloucester Road, crossing which last and passing along the Cromwell Road to the very door of the Exhibition itself; the trains of omnibuses might deliver their loads and return without the slightest confusion. A small fare would bring in a revenue far beyond the cost of such a simple convenience. It is well known that in the last session an Act was obtained for the construction of a railway in this direction. For some reason or other nothing has been done towards carrying this out, and it is imperative that some one or some company should perform the office so neglected.

One more element of confusion remains to be examined. It is not known, we believe, whether the Government will or will not lend again the triangular piece of ground in Hyde Park, which was at the disposal of the Exhibition Commissioners of 1851, for the parking of the carriages of visitors. Everyone recollects that this triangular space was between the Queen's Drive and Rotten Row—a spot rather distant from the Exhibition Building as it now stands, but still the only available space, by appropriation of which confusion and discomfort can be avoided.

SCIENTIFIC NOMENCLATURE.

Kensington, Oct. 31, 1861.

HAD Milton lived in our days, and studied the "ologies," I think it would have been to them, and not to the clannish names of the North, that he would have gone for illustrations in his Sonnet on the book called 'Tetrachordon.' Surely, that hard names are the curse of modern science, must be admitted alike by the ignorant and the learned.

Science is not for the idler. No man who has the industry and ambition to become a scholar will grudge reasonable pains bestowed on the language and classification of his subject. Much force, however, lies in the word *reasonable*. In many branches of study, but especially in the sciences of observation, the demands made upon the student exceed, as I think, all reason. Mineralogy, organic chemistry, zoology, and physiology are all overdone with technical words, while botany (the ladies' science) is the very abyss of hard names. This might be tolerated if the names were final. But no systematic nomenclature, which is to conform to theory, ever can be final; for the theory itself must change with advancing knowledge. It seems to me that this common character of all theories has been much lost sight of by the inventors of names. Hence it is that to make ourselves acquainted with the results obtained by previous observers, we have to master in each science, not one set of names, but many systems. In botany, it would appear, that no one thought he had done useful work unless he had added something to the already overwhelming mass. As an example of what the evil amounts to, I quote a passage from a little book on British Ferns, written by an author not at all disposed to overburden a popular work with unnecessary scholarship:—

"BRITTLE BLADDER FERN.—This fern, generally known among botanists as *Cystopteris fragilis*, has a host of other names. Some of these are *Cyathea fragilis*, *C. cynapiifolia*, *C. anthicifolia*, *C. dentata*; *Cystea fragilis*, *C. angustata*, *C. dentata*; *Polypodium fragile*, *P. cynapiifolium*, *P. anthicifolium*, *P. dentatum*, *P. rheticum*; *Aspidium fragile*, *A. dentatum* and *A. rheticum*."

In chemistry, the researches of previous years have led to the substitution of name for name, and symbol for symbol, one after another, so many deep that one does not know the "right" appellation of wood-naphtha, or how to ask for a liquid which used to be sold as "spirits of salts," and was *sometime* (as the epitaphs say) muriatic acid, hydrochloric acid, chlorhydric acid, and lately, according to a chemical reformer, hydra-chloro. Sulphates are called thionates by the organic chemists, who run up the Greek numerals until they get to pentathionates, and I certainly thought that the acme of descriptive nomenclature had been reached in "methylethylamlylophenylammonium," until I found a recent author proposing to substitute for it a word three syllables longer, by way of simplification: I forget exactly how he spelt it.

Is systematic nomenclature a necessity of systematic investigation? I think not. But as the consent of authorities seems to be, in practice at least, against me, I can only venture to propound the question for discussion, and to state reasons for my own opinion. The present opportunity is a particularly favourable juncture for this discussion, because most of the sciences of observation show symptoms of a change in fundamental ideas.

The applications of mathematical physics to chemistry—of chemistry to the functions of animal and vegetable life—the use everywhere of improved optical methods, among which I may mention spectral analysis and examination by coloured or polarized light,—and, more than all, the increasing tendency to view nature as one whole, and the increasing power to perceive universality in her laws—are threatening a complete and immediate disruption of all our existing theories.

And what is a theory? Our lexicon tells us it is a way of seeing—a mode of viewing. No mathematician, no accurate reasoner, ever thinks of a theory as being true, even potentially. It is a mode of viewing the truth, changeable with our point of view, and falling short of the truth by just so much as our limited reasoning falls short of the infinite variety and complexity of the universe, which we can no more grasp in its material than in its abstract form. The finite cannot comprehend the infinite.

These observations are trite; but it is just for the want of noting them that we are encumbered with the flood of names. These have been invented, and grouped, and changed, and re-grouped, and systematized, by each new theorist as if his theory not only embraced the truth, but were the

truth. Here and there some great man, like Linnaeus, saw the real meaning of his doctrine, as a guide to generalization; and of his system, as an index to his facts. But he wrote only for the learned, and those who explained his system popularly inflicted his nomenclature on the student, but failed to render his idea.

As a proof of the bad scientific habit of the botanists, I will instance what they call "the botanical census" of a country. The physical geologists have somewhat unwarily followed—or, perhaps, lazily quoted—them here, as if the enumeration were real rather than artificial. This so-called census does not give the slightest clue to the chance of finding a plant: it counts species, not individuals; and a nook in a hedge with a dozen different sorts of ferns or mosses counts for more than mile upon mile of brake or moorland. It tells of the system, not of the country. As if to confirm my view, Darwin's hypothesis, which seems now the favourite, looks upon species as transitory distinctions, and therefore makes all enumeration of them unreal.

It is a good thing for an objector to be able to point out a remedy. A good thing, I say, but not a necessary thing. A cook who has spoilt the dinner cannot expect his master to tell him how he should dress it; and an instructor, whose teaching is obviously bad, cannot expect a student to show him his business. Improvements can only be carried out by those who are thoroughly conversant with the details. An outsider can only indicate general principles, and give general advice. I shall content myself with suggesting the following negative rules:—Never invent a name for a thing which already possesses an exclusive one. Never alter an individual name to accord with any theory. Even if a name be not exclusive, do not distinguish, until absolute necessity arise. Look upon individual names as subjects for certainty and fixity; but upon systems as provisional modes of grouping them. Never treat as fact what is merely the consequence of a theory.

I do but ask of the botanists and chemists to follow an example already set them by mathematicians on the one hand, and by men of business on the other. What is an old treatise on botany or chemistry worth now? But the old mathematicians are still profitably read by rising men—indeed, a man can do but little unless he does read them. One has certainly heard of libraries so neatly packed that, like a new plant in a botanical genus, a new book revolutionized the whole arrangement.

The Whigs and the Tories are not guided by the same principles; yet one does not hear that the public offices are remodelled upon every change of administration. Business could not proceed upon such principles; neither can botany.

C. W. M.

HAMILTONIAN LOGIC. (No. 3.)

October 29, 1861.

No reply having appeared to my two letters [*ante*, pp. 51 and 222], I assume that my assertions are undeniable. Those assertions are, 1, That Hamilton has affirmed logicians in general to mean "possibly none" when they say "some"; 2, That he has given a system of syllogism which contains paralogisms. I shall now proceed to extenuate the faults which I have pointed out. For reasons of convenience, I take the second matter first in order. This is, in brief, that Hamilton, having introduced the word "some" as signifying that what is denied of part is affirmed of the rest, and *vice versa*, proceeds to lay down, as valid, a system of syllogistic forms, some of which, under this meaning of "some," are absolutely invalid. As for instance, a form under which we may reason as follows:—All lawyers are men; no lawyer is stone; therefore some men are not stone (*i.e.* the rest are). This I called the *Gorgon* syllogism.

The plain truth is that Hamilton halted between two systems. This I shall proceed to show in a manner wholly independent of the phenomena which I have to explain. In two passages—omitted by his editors as useless; to be restored in the next edition—of his Prospectus of 1846 he speaks of his system as "long adequately tested and matured";

and also as "gradually matured" in "an academical experience as long at least as the Horatian term [nine years]." His academical experience began in 1836: his exposition of a system of his own began in or about 1840: his two descriptions were published in 1846. In the first quotation he speaks of what he began to teach in 1840: in his second quotation he speaks of all he had on hand in 1846. In 1840, he began to teach the quantified predicate upon the common, or non-partitive, definition of "some"; that is, "some at least, possibly all"; or, at furthest, upon the singly partitive definition, "some-not-all, without any implication about the rest." On either of these definitions all his syllogisms are valid. In 1846, he had adopted the doubly partitive definition of "some"; that is, "some-only, and the rest the other way": and on this definition, as shown in my last, some of his syllogisms are invalid. In 1844, he was attacked by the bodily infirmity under which he suffered for the rest of his life. And I have no doubt that, when he returned to his studies after the seizure, he imagined that he had tested the whole system of syllogism upon his most recent definitions of the quantifying words. Every person who has been suddenly interrupted by illness knows how apt one is in such a case to forget the extent to which work on hand had been carried. As to his passing what I have called the Gorgon syllogism as valid inference, after actual examination, there is no need to say that it was impossible he should have done it.

Speaking subject to correction—and very desirous of it, if it can be made—I say that nothing was published before the 'Discussions' (1852) from which it could even be suspected that Hamilton had departed from the Aristotelian meaning of "some," except two sentences in Dr. Mansel's review of me and others in the *North British Review* for May, 1851. From these it cannot be ascertained whether the partitive system which seems to be intended be of the single or double character. Of these two sentences, followed in a year by the 'Discussions,' I could make nothing conclusive: and until the posthumous publication of the 'Lectures' I never felt justified in assuming that there was any departure from common meaning. On this point I shall have to enter further elsewhere.

There is one question which I cannot decide. Did Hamilton mix up and confuse the two partitive systems? He never alludes to the distinction. Did he discuss the doubly partitive system when treating of the proposition, and slide into the singly partitive when he arrived at the syllogism? It will be asked who ever did such a thing?—and the answer is, that scores of logical writers have done more—have spoken of the word "some" in their preliminary explanations as if it were doubly partitive, and have been strictly and uniformly non-partitive in their subsequent use of the word. I repeat that on this point I can find nothing decisive; and I suspect that no settlement will be arrived at unless some of those who heard Hamilton's Lectures can produce, from their notes, a clear account of his use of the word "some" in the system which he taught as his own from and after 1840.

A. DE MORGAN.

THE CAREER OF A NORWEGIAN PROFESSOR.

Christiania, October 25, 1861.

THE venerable and learned Hansteen, Professor of Mathematics and Astronomer Royal, having sent in his resignation, a large procession, consisting of old and present students, repaired, on the 23rd of October, to the Observatory, to bid farewell to their time-honoured instructor and friend. Speeches were made and answered, and a cheerful chorus was cheerfully sung by the "Students' Singing Club," as an appropriate conclusion to the ceremony. The procession then filed by, with lowered flags, and returned to the town.

Perhaps a few words about this talented and well-known gentleman may not be deemed out of place. When the Norwegians succeeded in getting the consent of Denmark, in 1811, to establish a University of their own, Mr. Hansteen was selected

to fill the post of Professor of Mathematics and Astronomy. He was at that time twenty-two years old, and was master at a school in Fredericksburg, near Copenhagen. As it was not requisite for him to commence his duties before 1814, he preferred remaining abroad, in order to acquire a further insight into the practical part of his profession.

"In 1814," he writes, "when it was necessary that I should enter upon my duties at Christiania, I was obliged to purchase a lugger, and engage the services of a skipper and a score of Norwegian sailors, who had just escaped from a six years' imprisonment in England. At this time all Norwegians were compelled, under penalty of imprisonment for life, to travel to Norway only through Sweden. This I determined not to do. Accordingly, on July 14, I set out from Copenhagen, accompanied by my young wife and a younger brother, in an open boat. During the night we were chased by a Swedish privateer, and I had to encourage my men with draughts of *brændevin*, to pull their hardest. The following morning we sighted the coast of Norway, and also at the same time an English frigate. Hoping that they had not observed us, we continued our course, but were forced to bring-to after three shots had been fired, astern, ahead, and over us. After an anxious half-hour's waiting, Capt. Mackenzie, with great politeness, allowed us to proceed, and wished us a prosperous journey. My asseveration that I was going to Christiania to fill a professorial chair at the new University, and the presence of my young wife amongst the boat's crew, induced this kind-hearted gentleman to let us proceed on our journey."

Soon after his arrival at the Norwegian seat of learning, Prof. Hansteen found that there was an error of three-quarters of an hour in the time; it was, therefore, his first care to rectify the geographical position of the capital. Accordingly, in 1815, the University erected an octagonal wooden building, of six yards' diameter, near the walls of the fortress, which was fitted up with an old three-foot transit instrument, a reflecting telescope, a six-inch sextant, &c. Such was the first Norwegian Observatory. "I could not help feeling ashamed," remarks the Professor, "when strangers came and inquired after the Norwegian Observatory, to direct them to the little wooden building, which looked more like anything else than a temple of Urania."

Moreover, as the Professor's house was situate at a distance of 1,875 yards from the Observatory, it was often difficult in winter time to arrive there at the proper moment—and "it often happened that the door was frozen so fast to the door-post that I could not get it open, and had to return home with my object unaccomplished."

In 1828 the Professor undertook a journey into Siberia, where he remained two years, making those magnetic observations which have rendered his name so familiar to every scientific man in Europe. On his return, in 1830, a new observatory had been built, on the western side of the town, which is now, perhaps, better arranged than any in the whole of Scandinavia. His principal work was 'Untersuchungen über den Magnetismus der Erde.' He also wrote 'Souvenirs d'un Voyage en Sibirie,' translated by Madame Colban. It is expected that a more voluminous account of his experiences in Siberia will shortly appear.

M. R. B.

MUSIC; SCULPTURE; THE STAGE.

Munich, October 23, 1861.

RATHER more than a year ago, I read a statement in the *Athenæum* that Haydn's long-absent oratorio, 'Il Ritorno di Tobia' was shortly to be performed in Munich. Since that time, however, it has given neither sign nor sound till now, when it is promised for the opening concert of the Advent series. I trust this time the promise may be fulfilled, and that the year's interval may be fruitful as regards the execution of the work. Strangely enough, the same time has elapsed since another work of Art was mentioned in your columns, which also has just now been exhibited. I speak of Mr. Randolph Rogers's gate for the Capitol of Wash-

ington, which was cast in October, 1860, and has required the labour of a full year before it could be shown to the public. Some people complain that the works cast at the Bronze Foundry should require so much filing and elaboration, instead of issuing perfect from the actual process, and we must all wonder that so long a period should be needed. But I presume the immense amount of fine work on the panels and round the borders must be taken to justify the delay, and the satisfactory result is too evident to be disputed. I hear that the gate is to figure in the Exhibition of 1862, and its attractiveness in Munich is well shown in the fact, that 4,000 people went to see it the first day. It will easily be supposed that many of these were travelling Americans; and North and South met peaceably, admiringly, before the gates of that Capitol that one is defending against the other. I heard a pretty young lady observe that with such ornaments Washington would look like "some pumpkins,"—a national figure of speech which I quote for its smack of the soil.

There are nine panels on the gate, four down each side, and one crowning the top. In the first, Columbus is represented before the Council of Salamanca, endeavouring to prove the existence of another hemisphere, but vainly. In the second, he takes leave of his friends, mounted on the mule purchased with the money given by Queen Isabella; and in the third, he is pleading his cause before her and King Ferdinand. In the fourth, he sails from Palos; in the fifth, he lands at San Salvador, and takes possession of the newly-discovered country in the name of his king; in the sixth he gains the friendship of the Indians by releasing an Indian maiden made captive by one of his sailors; and in the seventh, he enters triumphantly into Barcelona. The eighth and ninth show us his degradation and his melancholy end. In addition to these groups, in which there is throughout much character and great animation, Rogers has marked the time of the discovery by placing statues of all the chief contemporaries of Columbus round the door, the reigning monarchs, with Cortes, Pizarro, Balboa; and between the panels are heads of the writers on Columbus and his successors, among whom Washington Irving, Robertson and Prescott are conspicuous. In other places are heads of American beasts, and festoons of fruits and flowers. On each side of the gate stands a statue destined for the Richmond monument to Washington,—Nelson who was Governor of Virginia at the breaking out of the American Revolution and afterwards a general under Washington, and Lewis in the picturesque costume of a Virginian sharpshooter.

The mention of these great works leads me naturally to speak of an inane statue King Ludwig has placed in the Promenade Platz, just in front of the "Baierischer Hof," and therefore in full view of all English travellers, to Max Emmanuel, Elector of Bavaria. The statue is erected to him in his character of stormer of Belgrade; but to readers of English history he occupies a more important position, as father of the prince chosen by the Partition Treaty to govern Spain, and as sharing with Tallard the honour of being defeated, at Blenheim, by the Duke of Marlborough. In his account of the Congress at the Hague in 1691, and of the French caricatures of it, Macaulay says, "In another, William appeared taking his ease in an arm-chair, with his feet on a cushion and his hat on his head, while the Electors of Brandenburg and Bavaria, uncovered, occupied small stools on the right and left." I have not seen the caricature, but I am sure the Elector cannot be more ridiculous there than he is here on his pedestal. There he stands, with uplifted sword, on an exploded shell, without an atom of motion in face or body, his face resembling that of a sheep, and his attitude that of an awkward fencer. Many suppositions were started to account for this tameness; some would have it that King Ludwig wished to typify that remarkably mild and gentle heroism of Gæsta, which he is said to admire. I think, however, that the true meaning must lie in the result of the storming of Belgrade under the Elector, for a German authority says that garrison and inhabitants fell under the sword of the conqueror. He is evidently supposed to be quietly cutting them down.

When I add, that this statue is flanked by four of the finest heads and most expressive figures in Munich, Gluck, Orlando di Lasso, Kreitmayer and Westenrieder, you will have an idea of the inappropriateness of its site.

Considerable progress has been made this summer on some of the buildings of both Kings, in particular the National Museum and the Propylæa Thor are fast approaching completion. A sitting figure of Bavaria has been placed over the former, and there are various reliefs towards the top, which are very amenable to Mr. Ruskin's criticism, expressed in his Edinburgh Lectures; they are placed so high that a powerful glass would be needed to examine them. There is a talk of making the Pinacothek more useful to artists, and of checking the system of restoration, which was lately exposed in one of the Munich papers. Hitherto, copying has not been allowed in any of the rooms where the pictures are hung on account of the floors, but now a wooden flooring is to be laid over the stucco, so that scaffoldings can be set up without damaging the floor or endangering the pictures.

The most amusing result of the trade question in Munich has been an *à propos* piece produced at the Court Theatre, and honoured with royal approval. The name of the play, 'Ansässig,' is taken from the laws affecting trade,—a word which means "established," for which privilege each one has to petition. Though written by a noted humourist of Munich, the play was more amusing for the novelty and realism of its characters than for its situations or its dialogue. And its characters are, strictly speaking, variations on familiar figures—old friends with a new face. Instead of the hard-hearted uncle, we have the master-tailor; for the dashing young lover, the head apprentice; for the young lady, the *demoiselle du comptoir*; for the intriguing middle-aged woman who is to seduce the lover from his allegiance and the uncle from his respectability, the widow of a tailor, possessing the house and business of her deceased husband. These are only slight changes of the type of old high comedy, but in their present aspect they are new to the stage, and they are the necessary growth of monopoly. The master-tailor, rude and overbearing, insulting his customers, telling them it is an honour to have anything from him, whether it fits them or not, and that he cannot alter his own handiwork, turning away his apprentice of eighteen years' standing because he has applied for a concession to open a business, and abusing the liberal party in terms borrowed from the late debate in the Chambers: the apprentice, who has been engaged for years to the shop-girl, but proposes to a widow in order to qualify himself in the only way open to him for master-tailor: the widow, who has had two husbands, and can command any further number by virtue of the Right which she has inherited:—given the system of trade, and such characters are predictable. If they are not actually drawn from the life, at least, it is said that the King recognized many traits of his own tradesmen among them.

E. W.

OUR WEEKLY GOSSIP.

Shakspeare's Gardens have had a most lucky escape; for we understand that among the persons who went down to Stratford to bid for the property, at the expected sale, was Mr. E. T. Smith, lessee of Drury Lane and Cremorne, and late lessee of the Alhambra. As this gentleman warmly congratulated Mr. Halliwell on the success of his labours, we have only to approve the sentiment, and to congratulate the public also. Let us add, that the newly-found Shakspeare portrait, of which we have before spoken to some purpose, has been placed by Mr. Hunt, the owner, in a room at the back of that in the house in Henley Street, in which Shakspeare was born. So much regard has been evinced on this occasion for the preservation of this "home of the bard," that in the room where this questionable portrait is suspended, an *opening has been made in the ceiling to throw light on the face!* A droller way of showing respect for the integrity of the shrine, as we find the house called occasionally, we have rarely met with. The fund

requires 600*l.* yet to make it complete. Mr. Halliwell declines guarantees, and will only accept subscribers of 100*l.* each.

The obituary of this week records the death (at the age of ninety-one) of Mrs. Pye, the widow of an ex-Laureate, whose name is hardly known to the readers of the present generation. Pye, who was "fixed a rhymist for life" by reading Pope's 'Homer' when a child, succeeded Tom Warton, in 1790, not in the enjoyment of the tierce of Canary, but of 27*l.* a year, substituted for the old and pleasant guerdon. Pye held the laureate crown, or was supposed to hold so magnificent a symbol, during three-and-twenty years, when much more fun was made of him than he deserved, and "Pindar, Pye et Parvus Pybus" was a phrase with which our sires were familiar. Pye had an honest admiration for Thomson, who would have been glad to have been Laureate, and whose 'Rule Britannia' shows how worthy he would have been of such an office. When Pye died, in 1813, the vocation had increased of dignity conferred on it by the appointment of Southey, who did not disdain it, as Gray proudly did, because the office had been enjoyed by mediocre men. Mrs. Pye lived to see three successors of her old master and husband, Southey, Wordsworth and Tennyson. Gray was not the only poet who refused the crown. It was alike refused by Hayley, Moore and Scott. Campbell applied for it, for the sake of the pension, when Southey died, but Peel gave it to Wordsworth. Leigh Hunt would willingly have worn it when Wordsworth passed away, and his verses written in acknowledgment of the pension conferred upon him by the Queen prove that there was the stuff of a true courtly poet in him, but the office was assigned to Mr. Tennyson. He was the first Laureate appointed under the present reign, and it may be remembered that, considering a Queen was reigning, the *Athenæum* suggested the propriety of naming a poetess to wear the crown, and pointed to Elizabeth Barrett Browning as one who would confer honour upon the nomination. We have spoken of crowns and crownings; and the phrase is not yet a mere figure of speech. In March 1855, the present Queen of Spain crowned Quintana, the Spanish poet, with a gold crown, in the Senate House, at Madrid.

When Walter Scott was last at Holland House, Kensington, he said of it:—"It will be a great pity when this ancient house must come down, and give way to rows and crescents." The ancient house, built by Thorpe for Sir Walter Cope, in 1607, still stands, but "rows and crescents" are already defacing the grand old Park on the north, or Notting Hill side; and certain indications of marked allotments show that the isolated and secluded mansion will soon be shut out from public view on the south, or Kensington side. The latter suburb will then lose one of its most attractive features. The house passed, by marriage with the heiress of the Copes, to the Rich family, and thence to the Edwardes, whose chief bore the title (in the Irish Peerage) of Baron Kensington. The domain was subsequently purchased by Henry Fox, the first Lord Holland of that name, and father of Charles Fox. It is now the property of Lady Lilford, sister of the late and last Lord Holland. The house will probably disappear, as the domain is gradually covered with Scott's dreaded "rows and crescents," or, if left standing, will perhaps be converted into an "establishment" or an "hospital," as was the case with one of the old mansions at the "Bayswaterings," which some of us may remember as Queen Charlotte's Lying-in Hospital. At all events, the character of the place will be extinguished, and will live only in men's memories, where incidents will be treasured of the gallant Earl of Holland, of the Rich family, who is said to have been the devoted admirer of Henrietta Maria; of the legends which give the green sward here as the scene of conferences between Cromwell and his most trusted generals; of the gay scenes enacted there in the great Republic time, and, indeed, of a later period, when the house was the rendezvous of the wits among the Whigs, and Lady Holland made the boldest of them stand in awe of her, except Sydney Smith,

who was fearless in the presence of the most audacious of women. The journals of Moore will be of use to the future historian of the house, around which so much is perishing. The avenue down which Sheridan used to walk unsteadily into the town, is no longer recognizable; and the "Adam and Eve" tavern in Kensington, where he used to tarry and get a little "more drunk" on his way, is as changed also, for the finer and the worse. Of all the good things uttered in this now departing house, the first Lord Holland of the Fox line gave expression to one, perhaps the most genuine for its quiet humour. When the Earl was dying, George Selwyn, who so loved to see executions, left his card. "If Mr. Selwyn should call again," said the moribund Lord, "show him up. If I am alive, I shall be glad to see him. If I am dead, he will be glad to see me." In the last century, the north side of the Park was the only pleasant portion of the long and dreary walk from Tyburn to Shepherd's Bush. It was a promenade which began and ended in any but a lively manner; for in Tyburn Field stood the permanent gallows, and at the east corner of Shepherd's Bush Common two ghastly gibbets reared their disgusting height, and held, rocking in the wind, the rattling bones of murderers "hung in chains."

"Hang educational purposes; let us amuse ourselves!" is said to have been the exclamation of a writer growing old and very weary in a pursuit which he found of small profit. His suggestion seems to have been widely acceptable; and amusement takes precedence of instruction. That great educational temple at Sydenham has discovered its most attractive professor in Blondin, and that renowned Funambulist pockets, as his *honorarium* for a single performance on the rope, as much as a hard-to-live curate, or an anxious Keeper of Manuscripts in the British Museum, earns in a year. The question is, on what resource will the Directors of the Crystal Palace rely when the marvels of M. Blondin cease to attract? They must look for something "sensational," and will probably find what they look for. Again, that part of the public who amuse and do not instruct themselves at home, are conscious of increase of appetite for highly-spiced and remarkably startling romances; and we observe, that their appetite is very well attended to, albeit with great peril to all that is pure, natural and healthy, and to the reputation of the author himself, whose book, once read, is laid aside for ever. It can hardly be said to be as bad as this on the stage, since two large bodies of the public are nightly resorting to see the traditional and the non-traditional 'Othello.' At Drury Lane, boast is made of keeping to "the text of the Immortal Bard," that being of English theatres the one where Cibber's text has the oftentimes shut out Shakspeare's. But there must be a public of lower tastes than these; for a London theatre, whose pieces are duly licensed by the Lord Chamberlain, announces this week three attractive but, we should say, not educational dramas, for performance, namely—"The Last Words of Bill Jones; or, the Spectre by Sea and Land"; to be followed by 'The Brigands' Haunt'; the whole to conclude with 'Horsemonger Lane Joe; or, the Child of the Hempen Widow.' Are not these dainty dishes for the intellectual sustenance of a public, to admit whom to a National Gallery on a Sunday afternoon would be set down as wickedness, with a very forcible adjective in front of it?

Having recently referred to the saving of the Crown Jewels in the fire at the Tower twenty years ago, we add a line to render justice to an active public officer on that occasion, the late Fitzmaurice Pierce, of whom Mr. E. Swifte, Keeper of the Crown Jewels, thus wrote to the Commissioners of Metropolitan Police:—"His services were of much importance to me in the necessary measures (which, as Keeper of Her Majesty's Jewel House, I took) for the preservation of the Regalia. He was entrusted by me, alone, at the inside, and he remained there until the last, handing to me the several articles, with the greatest steadiness and care, while the heat and the danger were rapidly increasing around us."

A visitor to the Dresden Gallery has a word to

say for Henry the Eighth:—"I do not know," he remarks, "whether it has occurred to any one since the publication of Mr. Froude's 'Henry the Eighth' to notice the singular confirmation afforded by Holbein's portrait of that monarch in the Dresden Gallery, to the views maintained in Mr. Froude's work. I was by no means predisposed to accept this, unexpected testimony, but on a recent visit I could not resist the impression produced by that pale, careworn face, full of thoughtful sadness, gazing at me with grave, but kindly eyes. The lips are colourless, and slightly parted, but capable alike of wrathful or of gentle utterance; the cheeks furrowed, every crow's-foot, wrinkle and line of thought exquisitely delineated, and very suggestive. It was totally unlike the bluff and brutal countenance with which I had been familiar. It was eminently a presence which might inspire affection as well as fear. Repeatedly turning to this wonderful picture, to me next in interest after the 'Madonna,' I came away feeling that, after all, Froude may be right."

Mr. Turner, the London agent to Messrs. Hachette & Co., the French publishers, sends the following correction of a statement respecting Doré's *Dante's Inferno*:—"Your statement in the *Athenæum* of the 19th inst. respecting Dante's *Inferno*, illustrated by Gustave Doré, is totally at variance with truth. Your Correspondent states that, having purchased for 5*l.* a copy of the book, which was subsequently advertised for 100 francs, his remonstrance drew from the publishers an admission of the original overcharge, and an offer of 3*s.* in compensation for a difference in price amounting to 20 per cent. or 20*s.* The assertion is untrue. No complaint has ever been made to me by any purchaser of the work at 5*l.*; nor have I ever offered, on the part of Messrs. Hachette, 3*s.* for a claim of 20*s.*"

Arrangements have been made at Naples, as in other parts of Italy, for sending works of Art to the Great Exhibition, to be held in London next year. The Italian Government has already decided to accept exclusively, all works produced after 1777. The principle on which they proceed is this:—Towards the end of the last century the Fine Arts in Italy, after a long decadence, assumed a new form and life; and dating therefore from this time, the wish is to illustrate a period which was distinguished at its commencement by the genius of a Canova and of the Appiani. A commission has been chosen by the Institute of Fine Arts in Naples for the reception of works presented by the inhabitants of those provinces, and the following persons compose it:—Cav. Smargiassi, landscape-painter, President; Enrico Alvino, architect, Secretary; Cav. Aloisio Invara, engraver; Cav. Tito Angelini, sculptor; Achille Catalano, architect; Teodoro Duclerc, landscape-painter; Cav. Mancinelli, painter; Francesco Piscenti, engraver; Gennaro Rico, painter.

A Correspondent writes from Florence:—"Sebastiano Pennisi, a Sicilian gentleman, whose powers of thought and extent of acquisitions are indeed extraordinary, considering the misfortune he has suffered, I believe, from birth—total blindness—published at Aci Reale, a few years ago, a work small in scale but pregnant in ideas, 'On Human Knowledge in regard to the Subjectivism of Sensations and to the Subjectivity of Ideas,' certainly worthy of notice for intrinsic merits, irrespective of the circumstances under which it was produced, and the early age of the author (not yet much past twenty), who gives such high promise of intellectual activity. The comprehensive grasp of the history of metaphysics in modern Europe, and the familiarity enabling to appreciate philosophic schools, whether of Italy, France or Germany, that these pages display, would be creditable to mental powers cultivated under the most favourable circumstances—in the case of a very young writer afflicted with blindness, might be called marvellous. Suffice it here to observe, that the philosophic views Signor Pennisi adopts for himself have the decidedly eclectic character,—steering a just course between extremes, and neither leaving too much to materialism or idealism,—opposed, in regard to some propositions, to Gioberti, and generally admitting the conclusions of Kant. He sees

the harmony between the essential principles of religion and the deductions of philosophy; and exemplifies that preference for the clear and rational, the healthful atmosphere and lucid argument, by which the leading minds in Italian metaphysics have eminently, indeed almost invariably, been distinguished. His conclusion is an earnest appeal to the intellectual ambition of his countrymen, in the desire of stimulating to progress in these speculative walks; and his last recommendation is, that profoundly meditative study be given to the works of Machiavelli, Galilei, Vico, and, above all, St. Thomas Aquinas, a writer evidently studied and thoroughly appreciated by him. In an appendix we have an interesting notice of another extraordinary man, alike instancing the mental energies that triumph over depressing calamity, Vincenzo Tedeschi, Professor of Philosophy at the Catania University, who became blind in boyhood, yet when still quite young was familiar with mathematics, physics, astronomy, natural history, physiology, and the social sciences in general; surpassed all competitors in the *concorso* at that University for the professorship of Physics, but, on account of his misfortune, was postponed to another candidate, as naturally incapacitated for this chair, though immediately appointed to another, which he continued to occupy till his death, a septuagenarian, in 1858. Signor Pennisi, his disciple and friend, pays eloquent tribute to the memory of this gifted and admirable professor, whose most remarkable work was the 'Elements of Philosophy,' one of many productions, among which his 'Grammatica Generale' is here eulogized as 'alone sufficient to display the wonderful profundity of his genius.'"

By a letter recently received from Sir R. Schomburgk, it is evident that the royal family of Siam is determined not to vegetate like their predecessors, but to see the world. Sir Robert says:—"A steam fleet, consisting of two screws belonging to the Prime Minister and one of the First King's, the latter having two sons of His Majesty on board, paid a visit recently to Singapore, Penang, and Malacca. They were much pleased with their reception, and the King requested me to return 'his heart-felt thanks' to the authorities. The Second King is building a fine steam-frigate, and he says as soon as she is ready he will go in her to Singapore. The First King has signified his approval of a proposition, emanating from the Protestants at Bangkok, to build a church, and has promised to contribute towards its erection from the royal treasury." Sir Robert Schomburgk adds, that it is intended to make a promenade and drive for the residents at Bangkok, and that efforts are also making to erect lighthouses at the entrance of the river on which Bangkok is situated, the navigation of which is extremely intricate.

Major Count Berlichingen-Rosebach has just published a 'History of the Knight Götz von Berlichingen with the Iron Hand, and of his Family.' This comprehensive work contains for the first time the complete documents, with the deposition of the witnesses and the sentence, of the legal proceedings against Götz, on account of his participation in the Peasants' War. These documents, which would fill a decent volume of themselves, form only the fourth part of the work. It begins with the autobiography of the knight, after the best manuscript, which is preserved in the castle Neuenstetten, in Suabia. Then follow 180 records, mostly all hitherto unprinted; and, as an addition, the history, description and copy of the celebrated Iron Hand. The history of the family of Götz von Berlichingen, from the most ancient times to our days, concludes the interesting book.

SCIENCE

SOCIETIES.

NUMISMATIC.—Oct. 24.—J. Williams, Esq., Librarian, in the chair.—Mr. Sharp exhibited an ancient British coin of one of the sons of Comius, a variety hitherto unpublished, the ring ornaments being on the obverse instead of the reverse.—Mr. Williams exhibited the first volume of a series of electrotypes of Roman first and second brass, taken

by himself, and when complete to consist of six volumes.—Mr. Evans read a communication from M. de Koehne, Conseiller d'État of St. Petersburg, 'On the System at present in vogue in cataloguing Coins for Sale,' in which he advocated giving further description of the coin, and distributing them into smaller lots.—Mr. Williams read a paper, communicated by W. B. Dickinson, Esq., 'On Chinese Knife-Money,' in which he suggested that the origin of the Chinese copper money was the gradual diminution of the blade and handle of the knife till only the suspensory ring was left, which exactly represents the present coinage of the country.—Mr. Madden read a paper, communicated by R. S. Poole, Esq., 'On a Coin from the Cyrenaica, presented to the British Museum by—Crowe, Esq., H.M. Vice-Consul at Ben Ghazee.' It bears the two letters K K, and one of them, no doubt, stands for KYPANAION, whilst the other, according to Mr. Poole's suggestion, probably represents KOINON, which form occurs singly on the coins of the Cyrenaica of the Ptolemaic period. Some interesting remarks on the above word followed; and Mr. Poole concluded his paper with the remarks, "that the coin was very rare; that there was only one other, engraved, from the French Collection, in MM. Fallé and Lindberg's work; and that there the letter (of which only one is given) was represented as a X, and not a Καππα, which error the Museum coin would correct."

MEETINGS FOR THE ENSUING WEEK.

- Mon. Entomological, 8.
— Architects, 8.
Tues. Photographic, 8.
Wed. Geological, 8.—Bone Caves of Lunel Viel, Hérault; Marcel de Serres; Petroleum Springs, N. America; Dr. Geiser; Volcanic Phenomenon, Manila; Mr. Velch; Land Animals, Coal Measures, Nova Scotia, Dr. Dawson.
Thurs. Linnæan, 8.—W. African Tropical Orchids, Dr. Lindley; 'Structure of the Anther,' Prof. Oliver; Gentianæ, Dr. Grisebach.
— Chemical, 8.—'Action of certain Gases on Alkaline Peroxides,' Mr. Harcourt; 'Results of Analyses of Coppers,' Messrs. Abel & Field; 'Occurrence of Bismuth in Copper Minerals,' Mr. Field.
Fri. Astronomical, 8.

FINE ARTS

'INTERVIEW BETWEEN WELLINGTON AND BLÜCHER AFTER WATERLOO.'

WE have the satisfaction of being able to announce the rapidly-approaching completion of the grand painting upon which Mr. MacIse has been engaged for about eighteen months past. Finding that the process of fresco-painting was imperfectly adapted for subjects requiring multiplicity of details, Mr. MacIse proceeded, in the autumn of 1859, to Germany, to make researches as to the practice of the stœchœrome, or water-glass method of painting. Fully satisfied with the peculiar adaptability of the new system for his purpose, he adopted and has wrought it with even greater success than could have been anticipated.

We need not describe the process itself; but refer our readers to papers formerly published in the *Athenæum* on the subject, and to Mr. MacIse's recent letter to the Commissioners on the Fine Arts, and appended to their last Report. Mr. MacIse is perfectly satisfied with his experiment, and more than one of the artists now painting at Westminster express the same conviction, and are adopting the new material. If no other advantage was afforded by the new process that of dispensing with the preliminary cartoon is immense. Mr. MacIse considers such a preparation unnecessary.

The picture in question is executed upon one of the large compartments, which are forty feet long, of the Royal Gallery in the New Palace at Westminster. Nearly in the centre of the work is placed the Duke, mounted upon Copenhagen; Blücher, also mounted, grasps the hand of Wellington with characteristic force and fervour,—his eager, resolute face, with his grizzled moustache, his grey hair and keen grey eyes—hard, strong and grim—show beneath the Prussian travelling cap he wears. He has just moved his horse to go, and yet again pulls him up to clasp the victor's hand, whose work he is now about to finish, for it has been settled between the Generals that the pursuit should be taken up by the Prussians, while

the tired and war-worn English rested upon the field of battle. Tired and war-worn is the Duke, calmer, more resolute and still than the demonstrative Prussian. The composition forms itself into great masses, very skilfully designed to emphasize this central group of the Duke and General, and without obviously declaring the art employed to that end, resolving itself into sections which are subservient to a grand whole. We see along the back of the picture the English cavalry pursuing the flying French artillery and waggon-train down a hill and upon its rising crest. Immediately behind the heads of the Generals is the name of the inn, "*La Belle Alliance*," appropriately written upon a board fixed against the side of the house. The ruined roof, the torn walls, the slow wreaths of smoke that rise through the denuded rafters, the deserted dove-house, whose inmates the war has frightened away, are all signs of the havoc that has been going on, and even yet not ceased, as the flying artillery shows.

Like two wings of the composition, on either side of the Generals is grouped the Staff of each, characteristically different in expression;—the Prussians are intelligent, absorbed in the interview before them, or impressed by the great event which has taken place, and very eager to pursue and revenge their country upon the French, for many cruelties and wrongs,—but they look hard and fierce from that very cause; while the English, although grave enough, seem glad and joyful without sternness or ferocity, their fresh, ruddy faces contrasting strongly with the grey sallowness of the others. On the Prussian side, next to Blücher, ride Gneissau, the commander, to whom the pursuit was given, with white plumes in his hat, Nostitz, Bulow—an old, yellow man, in a blue coat loaded with orders,—Ziethen, and others; amongst them a Brunswick officer, with the skull and cross-bones on his shako, and nearest to the front, mounted upon a magnificent white horse, rides Sir Hussey Vivian (Lord Vivian) in a hussar's dress. On the Duke's side is a group of officers, few, indeed, of note, seeing that most of the heroes of the fight had been rendered *hors de combat* before the meeting took place. Just behind the Duke are General Somerset and Lord Arthur Hill (Lord Sandys), and between them is seen the face of the Hon. Henry Percy, who bore home the despatches and the captured eagles. A few of the 2nd Life Guards and Royal Horse Guards Blue, in the blue or red uniforms of each corps, such as the fortunes of the day had left in their saddles, to form the Duke's escort, make up this wing of the composition. Some of them cheer, waving their sabres; one bears an eagle, and another the shot-torn banner of his regiment. The shakos, helmets and bearskins worn by each body respectively, have been grouped and got together by the artist with wonderful skill, so that they fall into harmonious masses of fine composition.

No part of this extraordinary picture deserves more unqualified admiration than the grouping of the horses, with the immense variety of their actions, and even their expressions. Solid, alive, vital, as it were equine, and magnificently drawn and grouped are these animals. The steed Blücher is mounted upon is full of the fire of his fierce master, and seems bent upon dashing off. Wellington's famous animal, Copenhagen, stands with gingerly delicacy and grace amongst the slain; his glossy flank seems to twitch and his grave eye to look commiseratingly about. Hardly inferior to these are the black horses of the English Guards, which form a mass of solid colour gravely contrasting with the lighter bays mounting the Prussians on the other side, to which last the most magnificently painted white horse ridden by General Vivian forms a luminous central point of brilliant colour, that will win the admiration and delight of every spectator.

This horse of General Vivian's is a very important element of the composition, not only by centralizing and illuminating the whole of that side of the composition by its colour and brilliant treatment, but by its action connecting the upper group of riders with the line of wounded and slain men lying upon the ground athwart the front of the picture. The animal snuffs at the face of a

Carabineer, whose breath has gone for ever. Beside this Carabineer lies a wounded Englishman; next is a French Cuirassier, and then a Highlander, who, having been wounded in the arm, has had a tourniquet applied to it. He is a piper, and has blown his instrument with his latest breath; for the surgeon, who left the tourniquet upon his limb, will find, indeed, more pressing cases to attend to, seeing that he is going beyond the reach of human ministrations. There he is left, with outstretched arm and fingers strained and rigid; beside him, fallen from his grasp, lie the pipes he will never blow more and the steel-hilted claymore, that failed to save him from the winged Death. Above are two Irishmen, frantically cheering their victorious countryman the Duke, and waving their caps; these are Connaught Rangers. Next, beyond this, is a group about a captured gun, over which lies a French Artillery officer's body, just as he died to defend his command, and a Cuirassier dead upon the ground before the muzzle; the gun-carriage has been shattered and the gun itself indented by English shot. Below lies an English colour-sergeant, disabled by a wound in his leg, which an hospital orderly bandages up. This is an Englishman, and his face, confessing but not succumbing to pain, is finely expressive.

On the other side of the composition, behind the Duke, are several groups; a Highlander, a Foot-guard and a Fusilier carry off the body of a youth of twenty-two years of age;—this is the "young, gallant Howard," mentioned with grief by Byron. He has been struck down just at the end of the battle, and leaves a young widow and unborn child to mourn the terrible war. The faces of his attendants, full of tender commiseration, are perfectly expressive and apt. Upon the ground lies an English general officer, wounded in the breast, attended by a Light Dragoon, a Foot-guard and a drummer. Nearer the centre, three of the Life Guards, whose contorted faces show the pain the effort costs them, brandish their sabres and cheer. Their trumpeter lies dead in the front, his silver instrument battered by a musket-ball, its embroidered, beard-like banner across his knees. Quite in the centre, and seen between the horse's legs, lie more of the wounded and the dead. Removed from this, and at the extreme left of the picture, is the wounded white horse of a Cuirassier, madly striving to rise from under his master's body, which, thrown almost from the saddle, lies athwart the carcass of another horse, whose eyes are just glazing in death. Against the margin of the picture lies a tall Enniskillen Dragoon, badly wounded, his helmet off, attended by a comrade. On a gun above these lies a dying Hanoverian, to whose lips a priest holds the crucifix, with wondrous earnestness of expression,—a companion holds up the heavy head. A Sister of Mercy and a *Vivandière* regard the scene; the last, hardened but commiserating, holds a glass of spirits for the dying man, taken from her barrel. Behind her and upon the frame of the gun is placed a knapsack filled with crosses, jewels and gew-gaws torn from the slain; these a round-headed infant, the woman's child, plays with. All about the field are scattered arms, stoven-in drums, broken musical instruments, spent shot and shattered shell. Behind, the flying French artillery, ambulance waggons, and ammunition carts tear along in a fearful rout, hotly attacked by English cavalry. This, like an arch, binds in the whole composition, that has in itself all the finest qualities of Art, especially well applied to its purpose here of architectonic decoration.

A certain sculptural character of design and grouping has been wisely adopted by Mr. MacIise, which gives a singleness of look to the whole, however broken up it may be by the groups we have attempted to describe. With perfect judgment, the artist has carefully abstained from introducing any personages or incidents which do not pertain to his design; even so rigidly has this been done, that all the great men who were wounded in the early part of the engagement, and not, therefore, at this time present, have no place here.

It remains but to speak of the execution of this magnificent picture in some of the qualities which

constitute its technical value. It may appear supererogatory to refer to a certain hardness and want of atmospheric gradation or even clearness of grouping in design, which in one or two minor points renders it difficult to account for the action of certain figures. These points are few indeed. Mr. MacIise has produced phases of isolated colour which are beyond praise. Subdued as his work necessarily is by its architectonic character and the nature of the material employed, it is nevertheless surprisingly strong and vigorous and delightfully harmonious to an artist's eye. In this respect we need not say it far transcends anything Mr. MacIise has yet produced. In imitative power, nothing can be more satisfactory. Finished, but not frittered into littleness, every portion keeps its place, while the peculiar character and quality of every substance and every texture represented are given with perfect fidelity.

FINE-ART GOSSIP.—Mr. E. M. Ward has obtained from the Liverpool Society of Fine Arts the prize promised by them for the best picture contributed to their current Exhibition, the work so distinguished being '*The Last Moments of Charles the Second*,' recently in the Royal Academy. This artist's fresco of the '*Flight of Charles the Second with Jane Lane*,' to which we alluded last week, has been placed in its proper position in the Commons corridor of the new Houses of Parliament. Considerable as had been Mr. Ward's success in the works previously executed in the series of national commissions entrusted to him, he has made a great advance in executive power in that last produced. A greater depth of tone and more complete mastery of the material have followed advanced practice, so that the work is unusually vigorous and broad in treatment, admirably kept together, and a more perfect whole than almost any painting with which it can be compared. The colour is warmer, softer and richer, notwithstanding an excess of coldness in the blue of the sky background; even this, however, is less in degree than it strikes the spectator at first sight, for we have to make full allowance for the appropriate autumn effect, the glow of the foliage, with which the sky contrasts, and the warmth of colour judiciously employed in the costumes of the figures. After a little study we become familiarized with this peculiarity, and, it may be, error. The great attention to nature Mr. Ward has given in developing his design is more than enough to make the spectator overlook a far greater shortcoming than that alluded to: from this faith in nature it probably arose that this slight want of balance strikes the eye. Such fidelity is well rewarded by the artist's success in dealing with the design itself, the effective power of the two figures, which tell with admirable solidity, and the great variety and beauty of the colour in many parts of the picture. Every one knows the story of how the fugitive passed through the ranks of a detachment of Parliamentary soldiers, who were actually on the look-out for him, he being disguised as a well-to-do rustic, conveying the lady upon a rough farm-nag. Mr. Ward has overcome the technical difficulty of composing the two figures on horseback, with great power. The half-humorous expression of Charles and the terror of his companion are excellently given. The former sits well in his saddle: a partly-suppressed air of military horsemanship and training is cleverly hinted at as something different from the slouch of a rustic rider. The horse itself is capitally designed, drawn and modelled; its air of hesitation on first stepping into the water—it is at the ford of Stratford-on-Avon the scene is supposed to have taken place—tells well: this is expressed by the drag forwards of the beast's hoof, feeling the stream, as it were, before he ventures well into it. An old tree, its leaves tawny with autumn tints, overhangs the bank with brawny arms and rugged trunk. Behind are the troopers above named, the spire of the church wherein Shakspeare is buried, the banks of the Avon and a few trees growing upon them; the river fills up the foreground.

Mr. Foley has a commission to execute a bronze

statue of Mr. John Fielding, of Todmorden, near Manchester, a gentleman well known through his active benevolence in obtaining a remission of the hours of factory labour, and by other public services. This work, which has been liberally subscribed for, is to be placed at Todmorden, the residence and birthplace, we believe, of the person in whose honour it is erected.

Tourists in Yorkshire will find Seamer Church, about five miles from Scarborough, well worthy of a visit. A good deal of mischief has been done to the exterior by miserable restoration and the erection of a tower, the design of which is poor to the last degree. A notable feature of the old building remains in the turret, holding the Sanctus-bell, placed, as usual, outside, over the chancel arch, and rung to this day for ordinary services, by a rope within. The bell itself remains. Within the church some matters of interest present themselves: the Norman clerestory windows on the south and half of the north side; in the remainder of the north side a window of decorated character has taken the place of the clerestory and side lights. There is a late decorated screen with some paintings; coarse modern restorations of shields of arms, of the Leeds family, we believe, upon them. Above the central opening of this screen, giving access to the chancel, is a stump of wood peering over the topmost moulding. From its situation we conclude this to be the foot of the rood or cross which was anciently placed there. A disused vestry, leading off from the altar, has its high pointed stone roof and fireplace of early date; on the exterior of this portion of the church may be seen the original chimney belonging to this fireplace. Some indents for monumental brasses and less important matters may be seen also. The old vestry is greatly neglected. It is damp, with slimy dirt upon the floor, with tall ferns actually growing by the fireplace and between the stones of the pavement.

MUSIC AND THE DRAMA

ROYAL ENGLISH OPERA, COVENT GARDEN, under the Management of MISS LOUISA PYNE and MR. HARRISON. Continued Great Success of HOWARD GLOVER'S RUY BLAS.—On MONDAY, November 4, 1861, and during the week, to commence at Seven o'clock, GEORGETTE'S WEDDING. Miss Thirlwall and Mr. Henry Corri. After which, at Eight o'clock, on MONDAY, TUESDAY, WEDNESDAY, THURSDAY, and SATURDAY, the New and greatly successful Opera of RUY BLAS. Supported by Miss Louisa Pyne, Mesdames Susan Pyne, Thirlwall, Jessie McLean; Messrs. Santley, A. St. Albyn, Patey, and Mr. W. Harrison.—On FRIDAY, at Eight o'clock (first time), G. A. MACFARREN'S latest great Operatic Work, entitled ROBIN HOOD. Supported by Messrs. Santley, George Honey, C. Lyall and Henry Haigh; Miss Susan Pyne and Madame Guerbelli (her First Appearance on the English Stage).—Conductor, Mr. Alfred Mellon.—The Box-Office open Daily, from Ten till Five. Commence at Seven o'clock.

DRURY LANE.—On Monday Mr. G. V. Brooke appeared for the first time in London, after an absence of eight years, in the character of *Othello*. Mr. Brooke is, perhaps, little aware of the alteration effected in theatrical tastes during his residence in the colonies; but in no long time the difference will force itself upon his attention. He will find that he can no longer depend on declamation, however finely or musically intoned, nor on the ordinary stage-expedients to which he had been accustomed. An original view of character will be demanded, and an abandonment of, rather than an adherence to, old traditions. Nor will the public be any longer satisfied with a play being supported by one performer, and the inferior parts intrusted to nobodies. Yet this is the condition in which the management have placed Mr. Brooke, who stands alone in his *Othello*, unsupported by any actor capable of impersonating either *Iago* or *Cassio*;—with an exceedingly feeble *Desdemona* and an extremely boisterous *Emilia*. Mr. Brooke suffers from this want of completeness in the appointments, and the consequent want of attractiveness in the general performance. In its general style and execution, his *Othello* is much what it was; but it is no longer attended with the same interior life and feeling. All the points are made mechanically, as well as ever they were, but they are no longer accompanied with the same electric influence. There is manifest a want of aim, of intellectual perception, and of moral insight. He has become heavy, too; disproportionately pon-

derous in his delivery, and he loads his sentences with emphases which are exaggerated as well as too frequent. This is to be the technical elocutionist rather than the actor. Of genuine acting, indeed, there is but little;—action and attitude are forthcoming at stated intervals, but no spontaneous motion as the index to thought and feeling awakened at the moment. Mr. Brooke must modify all this, if he would regain his ascendancy. But human life has no second spring, and he will find it hard to recover the inspiration of his youth. It is true, that it was as an executant that he won his earliest laurels, and a brilliant executant he still remains;—but he must be something more, in these days of invention and competition. He must also insist on having justice done to his efforts by the management, if his present engagement is to eventuate either to his profit or honour.

HAYMARKET.—Mr. Booth appeared on Monday in 'Richard the Third.' It is scarcely to the credit of his taste that he preferred Cibber's version to the Shakspearian tragedy. The quiet tone that he adopted would have better fitted the poet's idea than that of the playwright. As usual, he reserved himself for the traditional points, and got over the level ground as rapidly as possible. Owing to this unseemly haste many a phrase escaped the emphatic utterance to which it is entitled. As on former occasions, he was badly supported—so badly, that portions of the fourth and fifth acts were received with laughter. In these days of theatrical reform managers should not permit Cibber's *Richard* to be substituted for Shakspeare's. The original tragedy, as produced by Mr. Phelps, at Sadler's Wells, some years ago, commended itself to the taste of judicious audiences, and was perfectly successful. Every such step in the way of theatrical reformation should be accepted as "an accomplished fact"; and no respectable management ought to go back to the old fashion, but rather should persevere in an onward and upward direction. In that direction, too, lies the only real path to profit; and it is one wherein ambition and duty may be reconciled,—wherein, in fact, they are identified.

OLYMPIC.—'A Legal Impediment,' a new farce, by Mr. John Oxenford, was produced on Monday, in which Mr. Robson performed the eccentric hero. It was the actor's first appearance since his illness, and he was received with acclamation.

PRINCESS'S.—M. Fechter's performance of *Othello* commands full houses, and occasions interminable controversies in the journals. This is partly caused by the fact that M. Fechter has published his version of 'Othello,' with the stage directions at full, which are observed in the representation at this theatre. The work is presented, too, as the instalment of a design on which M. Fechter has bestowed nearly twenty years' study. This adds fresh importance to his present attempt; and some critics and players are up in arms in defence of threatened tradition. M. Fechter has, in fact, and in plain terms, provoked the combat. In his Dedication to Mr. Richard Lane, he calls upon such coadjutors as he can enlist in his cause, "to press forward, to sap the foundations of that worm-eaten and unwholesome prison where dramatic art languishes in fetters, and which is called Tradition!"

To the credit of M. Fechter, it may be stated with truth that his stage-appliances have not excluded histrionic talent, but, on the contrary, have brought it out. The tragedy of 'Othello' is well cast and well acted; and the directions of his book have conducted to the end of a better representation than could have been accomplished without them. All his directions, however, are not equally good, and some have been found impracticable. For instance, in the fifth act, we find that the book directs Desdemona to quit her bed, and fall on her knees in agony, while Othello, in "mad fury, whirls round his sword over the head of Desdemona, who sinks to the ground as struck by the lightning of his blade. He turns to throw away his weapon, and Desdemona seizes the opportunity of rushing again to the door; but he stops

her passage, carries her to the bed, on which he throws her; then stifles her cries with the pillow, which he presses with both hands." Something like this is certainly done in the opera of 'Othello'; but such melo-dramatic action would certainly not be acceptable in a poetical tragedy, and M. Fechter has reason to congratulate himself that he listened to good counsel, and did not attempt this piece of business on Wednesday week. We are not, therefore, to accept M. Fechter's book as one having authority beyond its approved utility; but simply as a well-meant effort on the part of a foreigner to introduce improvements in the mode of representing great dramatic works on the stage of his adoption.

MUSICAL AND DRAMATIC GOSSIP.—For the season just opened, and which will virtually last till the Exhibition of 1862 closes, artists are already arriving or announcing themselves.—Herr Reichardt is here again.—Among total strangers, we are apprised, from Leipzig, that M. Davidoff, principal and *solo violinello* of that excellent orchestra (the fact of itself an introduction), intends to come to London early in the spring.—The sisters Marchisio are advertised to appear at St. James's Hall in January.

Since our last publication a note has been published, by Signor Costa, in reference to the report to which we gave currency last week; requesting any who may be concerned in the testimonial scheme to forbear from carrying it out, and stating that he has received the utmost testimonial which he could desire, in the regard of which he has been for many years the object.

Among other announcements of the week is Mr. Martin's, who, on behalf of the National Choral Society, states intentions of giving concerts at Exeter Hall during the winter to audiences exclusively composed of military officers and soldiers, who must all appear in regimentals—the explanation of the step stated being a desire to promote a taste for choral music in the army.

The disturbed state of American affairs is—as was inevitable—telling on public amusements. There is, however, to be an attempt at foreign opera in New York during the winter,—and one singer who may appear there, Miss Kellogg, is said by the *Musical Review* to be in negotiation with Mr. Gye, of our Royal Italian Opera.

A letter from that persevering letter-writer Signor Rossini, published in the French papers, confirms the rumour of the coming 'Titan.' The composer addresses M. Royer, the manager of the Grand Opéra, and begs for the loan of four bass singers—MM. Belval, Cazaux, Faure and Obin—who are to execute the composition in unison. Signor Rossini describes it as a simple chant, "with a Titanic rhythm," out of the common style,—and pledges himself that it contains neither trill, *arpeggio*, chromatic scale, nor roulade. No one need be surprised should the affair prove to include some piece of mystification.

The following requires no comment:—"You have fallen into a slight error in referring certain expressions attributed to Beethoven to Paer's opera entitled 'Leonora.' In the *Musical World* of the 7th of July 1860 I endeavoured to show that it was impossible for Beethoven to have known anything of Paer's opera previous to his having commenced his labours upon his 'Fidelio.' It is true Beethoven might have seen the score before Paer's opera was publicly performed; but it is an unquestionable fact that Paer's 'Leonora' was never performed in Vienna until 1809, four years after Beethoven had seen the *fiasco* which his opera had made.—I am, &c., JOHN TOWERS."

A new ballet-opera, 'Le Neveu de Gulliver,' by M. Lajarte, has just been given at the Théâtre Lyrique of Paris,—without success. M. Jules Lefort, the well-known singer of French romances, made his appearance on the stage, after having left it many years ago. He seems to have returned too late.—The *début* of M. Morère, at the Grand Opéra, a young tenor, laureate of the Conservatoire, has been apparently more fortunate.—There 'La Reine de Saba' has been put in rehearsal.

M. Pougin's monograph on Campra, which has been appearing in the *Gazette Musicale*, pleasantly lengthens the series of similar studies by him, to which any historian to come of French music will refer, as containing material and minute details overlooked elsewhere.

Herr Ernst, whose health continues in the melancholy state which has long been a matter of grave concern to his friends, has, nevertheless, it is said in the *Gazette Musicale*, composed a small opera, which is to be produced next season at Baden. —Mdlle. Artot, who has taken the place of a first opera favourite in Germany, is about to sing a part at Prague in the Czech language. —At Berlin the coronation operas have been 'Armida' (always performed with great splendour in the Prussian capital) and Spontini's 'Nourmahal.' The other operas of the pompous time were 'Les Huguenots,' 'Die Zauberflöte,' and M. Von Flotow's 'Miller of Méran.'

The effect produced by 'Alceste,' which has surprised those most sanguine on the subject, has naturally stirred up retrospect as to other Greek operas worth reviving. Sacchini's 'Edipe,' which had a vogue in its day, has been talked of:—as compared with the Greek music of Gluck, his predecessor—Sacchini's music is feeble, faded, antiquated. What is more new, composers are furnishing up their ideas of Electras, Medeas, and other antique heroines, with an eye to future triumphs.—We hold with some sensible remarks in the *Gazette Musicale* on the subject, fancying like their writer that such researches will hardly have a happy issue. Among the old operas on classical subjects, formerly extant by hundreds, none have stood the test of time, except Gluck's. Where are 'La Clemenza' and 'Idomeneo'? Where is 'Gli Orzi'? With Madame Pasta *Medea* left the stage—for the one tragedy on the subject which might be still tried with some hope (Cherubini's, of course) is made all but inaccessible by the fatiguing nature of the principal part. Even 'La Vestale' of Spontini may be said to linger rather than to live on the stage.—Nor have more modern efforts been felicitous. The great beauty of 'Sapho,'—the third act of which is probably the best third act of a first opera ever written—has been till now imperfectly felt by the many, owing to their want of sympathy in the story, or because there is too much or too little of the antique in the music.—The conclusion towards which these speculations tend is far too much lost sight of by those who are occupied in Art. It is too much forgotten that, in music at least, when absolute perfection has been attained, in any style, the risk of repetition and comparison amounts to a mighty drawback.

MISCELLANEA

Storm Signals.—I find on inquiry at this place [Ramsgate] that it is not the custom here to hoist the storm signals of Admiral FitzRoy. It may be of importance at the present season to draw attention to this circumstance, as the continued omission of such act may lead in some case or cases to loss both of life and property. The situation of Ramsgate as a tidal harbour of refuge, and for the small craft mainly, points to the expediency of early warning being afforded to them whilst passing. The master of any crazy or worn-out craft could then, in case the tide should be favourable, at once avail himself of the shelter of the harbour. Now, from lack of any such notice, he proceeds on his voyage, brings his vessel to an anchor when overtaken by contrary, bad weather, loses anchors and cables, and then, after enduring anxiety and distress, runs for this most difficult port, to the danger of life and ship. Altogether, the exhibition of these signals is not only a necessary, but a very easy matter, at this place. By simply fitting the mast on which the harbour-depth of water is announced with a cross-jack-yard, a most capital machine would be arranged for publishing far and wide the storm signals. J. C. G.

received.

THE FOLLOWING NEW WORKS WILL BE PUBLISHED IN NOVEMBER:—

UNIQUE GIFT-BOOK FOR THE APPROACHING SEASON.

EGYPT, NUBIA and ETHIOPIA. Illustrated by One Hundred Stereoscopic Photographs, taken by FRANCIS FAITH for Messrs. Negretti & Zambra, and numerous Wood Engravings. With Descriptive Letter-press by JOSEPH BONOMI and SAMUEL SHARPE, Author of 'Egyptian Antiquities,' &c. In 1 vol. small 4to. elegantly bound.

The EARLY ITALIAN POETS. From Ciullo d'Alcamo to Dante Alighieri (1100, 1200, 1300). In the Original Metres; together with Dante's *Vita Nuova*. Translated by D. G. ROSSETTI. Part I. Poets chiefly before Dante. Part II. Dante and his Circle. Post 8vo.

The LADY'S GUIDE to the ORDERING of her HOUSEHOLD, and the ECONOMY of the DINNER-TABLE. By a LADY. Post 8vo. price 10s. 6d. cloth.

SELECTIONS from the WRITINGS of JOHN RUSKIN, M.A., Author of 'Modern Painters,' 'Stones of Venice,' 'Seven Lamps of Architecture,' &c. Post 8vo. 450 pp. with Portrait, price 6s. cloth.

The SOUL'S EXODUS and PILGRIMAGE. By the Rev. J. BALDWIN BROWN, Author of 'The Divine Life in Man.' Crown 8vo. cloth.

HISTORY of the FOUR CONQUESTS of ENGLAND. By JAMES AUGUSTUS ST. JOHN. 2 vols. 8vo.

NEW VOLUME OF FAIRY TALES BY HOLME LEE.

The WONDERFUL ADVENTURES of TUFLONGBO and his ELFIN COMPANY, in their JOURNEY with LITTLE CONTENT through the ENCHANTED FOREST. By HOLME LEE, Author of 'Legends from Fairy Land,' &c. With 8 Illustrations by W. Sharpe. Small post 8vo. price 3s. 6d. cloth.

BIRDS: how to Rear and Keep Them. Uniform with, and by the Author of, 'In-door Plants.' With Coloured Frontispiece. Price 2s. 6d. cloth.

EXPERIENCES of an ENGLISH SISTER of CHARITY. By MARGARET GOODMAN. Small post 8vo.

CHEAPER EDITION.

FRAMLEY PARSONAGE. By ANTHONY TROLLOPE. 1 vol. post 8vo. price 5s. cloth.

CHEAPER EDITION.

LAVINIA. By the Author of 'Doctor Antonio,' 'Lorenzo Benoni,' &c. Small post 8vo. price 2s. 6d. cloth.

The FOUR GEORGES: Sketches of Manners, Morals, Court and Town Life. By W. M. THACKERAY. Crown 8vo.

LOVEL THE WIDOWER. By W. M. THACKERAY. Crown 8vo.

NEW NOVEL BY HOLME LEE.

WARP and WOOF; or, the Reminiscences of Doris Fletcher. By HOLME LEE, Author of 'Against Wind and Tide,' 'Kathie Brande,' &c. 3 vols. post 8vo.

The CORRESPONDENCE of LEIGH HUNT. Edited by his ELDEST SON. With a Photographic Portrait. 2 vols. post 8vo.

HOUSEHOLD EDUCATION. By HARRIET MARTINEAU. A New Edition. Post 8vo. price 5s. cloth.

SMITH, ELDER & CO. 65, CORNHILL.

Ready this day, in One Thick Volume, 8vo. half bound, price Five Shillings,

WILLIS & SOTHERAN'S NEW AND ENLARGED GENERAL CATALOGUE OF BOOKS ON SALE BY THEM.

This Catalogue, which has been in preparation for nearly twelve months, comprises upwards of 15,000 Articles and nearly 60,000 Volumes of the best and most interesting Works, Ancient and Modern, upon every nearly subject, including GENERAL LITERATURE, SCIENCE, and the FINE ARTS. It contains also many RARE AND CURIOUS BOOKS, OLD BIBLES, POETRY, a good Collection of the best COUNTY HISTORIES, GALLERIES OF PICTURES, and other BOOKS OF ENGRAVINGS, EARLY MANUSCRIPTS, &c.

Among other Books in this Catalogue, with the Prices affixed, may be enumerated the following :—

County Histories and Topography.

- ATKINS' Gloucestershire, folio.
BAINES' Lancashire, 4 vols. 4to.
BAKER'S Northamptonshire, 2 vols. folio.
BEDFORDSHIRE Illustrations, extensive collection.
BLOMFIELD'S Norfolk, 5 vols. folio.
BORLASE'S Cornwall, 2 vols. folio.
BRAND'S Newcastle, 2 vols. 4to.
BUCK'S Views of Castles, &c. 2 vols. folio.
CAMDEN'S Britannia, 3 vols. folio.
COLLINSON'S Somersetshire, 3 vols. 4to.
DOMESDAY Book, by Ellis, 4 vols. folio.
DRAKE'S York, folio.
DUGDALE'S Warwickshire, folio.
— Monasticon Anglicanum, 8 vols. folio.
GREGSON'S Lancashire, folio.
HASTED'S Kent, 4 vols. folio.
HORSLEY'S Britannia Romana, folio.
HUTCHINS' Dorset, 4 vols. folio.
MANNING and Bray's Surrey, 3 vols. folio.
MORANT'S Essex, 2 vols. folio.
NASH'S Worcestershire, 2 vols. folio.
ORMEROD'S Cheshire, large paper, 3 vols. folio.
OWEN and Blakeway's Shrewsbury, 2 vols. 4to.
PLOT'S Oxfordshire and Staffordshire, large paper.
RUDDER'S Gloucestershire, folio.
SHAW'S Staffordshire, 2 vols. folio.
STOW'S London, best edition, 2 vols. folio.
STUKELEY'S Stonehenge and Abury, folio.
SUTREES' Durham, 4 vols. folio.
THORESBY'S Leeds, 2 vols. folio.
WHITAKER'S Richmondshire, 2 vols. folio.

Natural History.

- AUDUBON'S Birds of America.
— Quadrupeds of America.
CURTIS' Flora Londinensis, 5 vols. folio.
— Botanical Magazine, 74 vols.
CUVIER'S Animal Kingdom, 1 p., India proofs, 16 v.
EDWARDS' Botanical Register, complete, 34 vols.
GEOLOGICAL Society's Trans., complete, 12 v. 4to.
GOULD'S Birds of Asia, 3 vols. folio.
— Humming Birds, 20 parts, folio.
GREVILLE'S Cryptogamic Flora, 6 vols.
HEWITSON'S Diurnal Lepidoptera, 2 vols.
JARDINE and Selby's Ornithology, 3 vols. 4to.
KNIP'S Pigeons, folio.
LAMBERT'S Genus Pinus, 3 vols. folio.
LATHAM'S History of Birds, 11 vols. 4to.
LODDIGES' Botanical Cabinet, 20 vols.
MAERTIUS' Grand Work on Palms, 3 vols. folio.

WILLIS & SOTHERAN, ANCIENT AND MODERN BOOKSELLERS, 136, STRAND.

NEW GENERAL ATLAS.

DEDICATED BY SPECIAL PERMISSION TO
HER MAJESTY.THE ROYAL ATLAS
OF
MODERN GEOGRAPHY.IN A SERIES OF ENTIRELY ORIGINAL AND
AUTHENTIC MAPS.By A. KEITH JOHNSTON, F.R.S.E. F.R.G.S.
Author of 'The Physical Atlas,' &c.With a complete Index of easy reference to
each Map, comprising nearly 150,000
Places contained in this Atlas.Imperial Folio, half bound in Russia or Morocco,
price 5s. 15s. 6d.

"Of the many noble atlases prepared by Mr. Johnston and published by Messrs. Blackwood & Sons, this Royal Atlas will be the most useful to the public, and will deserve to be the most popular."—*Athenæum*, August 10, 1861.

"We know no series of maps which we can more warmly recommend. The accuracy, wherever we have attempted to put it to the test, is really astonishing."—*Saturday Review*.

"The culmination of all attempts to depict the face of the world appears in the Royal Atlas, than which it is impossible to conceive anything more perfect."—*Morning Herald*.

"This is, beyond question, the most splendid and luxurious, as well as the most useful and complete, of all existing atlases."—*Guardian*.

"There has not, we believe, been produced for general public use a body of maps and a completeness to the Royal Atlas just issued by Mr. A. K. Johnston."—*Examiner*.

"In comparing this beautiful and valuable atlas with previous collections, every one must be struck, not only by the immense advances in geographical knowledge, but by the greatly increased power of representing that knowledge to the eye in the course of the last thirty years."—*Economist*.

"An almost daily reference to, and comparison of it with others, since the publication of the first part, some two years ago, until now, enables us to say, without the slightest hesitation, that this is by far the most complete and authentic atlas that has yet been issued."—*Scotsman*.

W. BLACKWOOD & SONS, Edinburgh and London.
Sold by all Booksellers.

MR. SKEET

WILL PUBLISH IMMEDIATELY—

OLD VAUXHALL: a Romance.

By W. H. MARSHALL, 3 vols. post 8vo.

F. G. TRAFFORD'S WORKS.

NEW EDITION, 5s. bound.

TOO MUCH ALONE. By F. G.

TRAFFORD, Author of 'City and Suburb.' A NEW and
CHEAPER EDITION, in crown 8vo. price 5s. cloth.

"We can cordially recommend 'Too Much Alone' to any reader in quest of a thoroughly good novel. It is a well-conceived, well-wrought-out story; but we regard it less as a present success than the commencement of a successful career."—*Athenæum*.

"'Too Much Alone' is an exceedingly suggestive phrase, and what it portends is admirably realized in the novel of which it is the title. It is a thoroughly good novel, both in conception and execution, and ought at once to secure for its author an honourable popularity. Among the rare combination of qualities which distinguish it, is its downright reality, which yet does not preclude an infusion of ideal grace into a story of domestic life."—*Spectator*.

CITY AND SUBURB. By F. G.

TRAFFORD, Author of 'Too Much Alone.' A NEW and
CHEAPER EDITION, in crown 8vo. price 5s. cloth.

"This is a first-class work, and cannot fail to attract universal attention. It is one of the most interesting and instructive novels we have ever read."—*London Review*.

"In pathos, sentiment and vigour the author is almost equally at home, and we do not hesitate to say that he will be carried to a high status amongst the romance writers of the day."—*Press*.

"Sustains the author's right to hold a very high position amongst contemporary novelists."—*Spectator*.

"We feel assured that the author is destined to hold a high place in the ranks of English novelists."—*Literary Gazette*.

"Will repay perusal with interest. . . . Decidedly interesting."—*Athenæum*.

"Opens with great effect. Ruby reminds us of Thackeray's most successful female character—Frix."—*Globe*.

"Ruby the beauty will stand out as a distinct personage in the reader's memory when the *dramatis personæ* of half-a-dozen intervening novels have melted into chaos."—*Saturday Review*.

"Has more than common interest attached to it."—*Illustrated*.

"We can unhesitatingly recommend the novel to all dwellers in 'City and Suburb.'"—*Critic*.

"The author has given us a really pleasing novel. The story is replete with interest."—*Morning Chronicle*.

"The announcement of a new work from this author's pen cannot fail to excite curiosity, and arouse expectation of that which is so dear to a novel reader, a really genuine, good novel. In the present instance that expectation is fulfilled: 'City and Suburb' is more than equal in ability and finish to the author's preceding works."—*Morning Post*.

FORTY YEARS' MILITARY and

"Every gentleman who possesses or cares for horses would do well to keep this book in his house."—*Globe*, July 28.

London: Wm. H. Allen & Co. 7, Leadenhall-street.

LONDON SOCIETY:

AN ILLUSTRATED MONTHLY MAGAZINE OF LIGHT AND
AMUSING LITERATURE,

FOR THE HOURS OF RELAXATION.

CONTAINING

SELECT TALES—BIOGRAPHY AND ANECDOTE OF SOCIAL CELEBRITIES—TABLE TALK—OBSERVATIONS OF LIFE AND MANNERS—REMINISCENCES OF DISTINGUISHED LEADERS OF SOCIETY—THE ROMANCE OF LONDON LOCALITIES—LEAVES FROM THE HISTORY OF OLD ENGLISH FAMILIES—ORIGINAL CONTRIBUTIONS TO SOCIAL AMUSEMENT—POPULAR STUDIES: LITERARY, CRITICAL, ARTISTIC AND SCIENTIFIC—HOLIDAY NOTES AND INCIDENTS OF TRAVEL—QUESTIONS OF DOMESTIC INTEREST AND TOPICS OF THE DAY.

This New Magazine will offer a variety of matter and illustration fitted for mental recreation and quiet enjoyment. It will be a book for leisure moments and their changeable moods, sometimes suggesting salutary thought, sometimes provoking a smile and a lighter vein—blending, if possible, the racy vigour of originality and the sparkle of a clear, nervous style.

Vivid Sketches by Author and Artist, Spirited Discussions, and Lively Narratives, under due restraint of taste and temper, will be combined to produce a readable and popular periodical—diversified in its contents and marked by freshness.

Neither governed nor swayed by any clique—free from the incumbrance of a forced "mission," or the dead weight of a hazy generality, this Miscellany comes forward to occupy open, broad, and well-marked ground.

'London Society' will sustain its title—reflecting as in a mirror and arresting as in a picture, glimpses of the brilliant Panorama of Modern Society, caught from various points of view. In addition to the usual elements of an agreeable, well-conducted Magazine, supported by able Writers and Artists, it will deal in a special and genial manner with the Phenomena, Humours, and Curiosities of Society in Town and Country.

That combination of elegance and energy which is at once the grace and glory of our English Life at all its greater centres,—those characteristics which form the distinguishing attractions of Society in the Capital and lend to it a peculiar fascination, will be portrayed in this Magazine by pen and pencil. It will seek to trace the subtle powerful influences exercised in the assemblies of cultivated men and refined women; to exhibit the action and re-action of thoughtful intelligence and ambitious effort; to estimate the force and define the direction of the Spirit of Society.

While essentially cheerful in tone, and even gay, as best becomes its chief purpose, 'London Society' will draw no veil over the sterner features of that many-sided life which it essays to paint. A pleasant companion may be, at the same time, a true friend, and an earnest hint does not act less forcibly when it comes with a smile and not with a frown.

Although presenting hard realities, as well as gentler traits, it will yet be the chief aim, because good is contagious as well as evil, to search out and linger over the sunnier aspects of life—to dwell on its benign influences and refreshing hours—its higher aspirations and nobler endeavours. By such means the new organ will try to depict, move and interest the

RANK, WEALTH, WIT AND BEAUTY

which constitute the World of "LONDON SOCIETY."

Published MONTHLY, price ONE SHILLING.

The FIRST NUMBER will appear on FEBRUARY 1, 1862.

* * * All Literary and Artistic Communications should be addressed to the Editor, accompanied by Envelopes for their return, if necessary.

OFFICE: 49, Fleet-street, E.C.

NOTICE.

MESSRS. SMITH, ELDER & CO. have had for some time in preparation a NEW SERIES OF STANDARD WORKS OF FICTION, to be published uniformly, at ONE SHILLING EACH VOLUME.

They expect to be able to publish, in course of the present and the ensuing month, the first Twelve Volumes of the Series, which will be printed in clear type, on good paper, and in a conveniently portable form.

Other Volumes will be issued at suitable intervals. It will be entitled—

"SMITH, ELDER & CO.'S SHILLING SERIES."

65, Cornhill, November 1, 1861.

EQUITABLE ASSURANCE OFFICE,

NEW BRIDGE-STREET, BLACKFRIARS.

ESTABLISHED 1762.

DIRECTORS.

THE RIGHT HON. LORD TREDEGAR, *President.*

William Dacres Adams, Esq.
Philip Hardwick, Esq.
William Samuel Jones, Esq.
John Alldin Moore, Esq.
William Frederick Pollock, Esq.

Charles Pott, Esq.
Rev. John Russell, D.D.
James Spicer, Esq.
John Charles Temple, Esq.
Right Hon. Lord Tredegar.

John Charles Burgoyne, Esq.
Lord George Henry Cavendish, M.P.
Frederick Cowper, Esq.
Richard Gosling, Esq.
Peter Martineau, Esq.

THE EQUITABLE is an entirely MUTUAL Office. The reserve, at the last "rest," in December, 1859, exceeded three-fourths of a million sterling, a sum MORE THAN DOUBLE the corresponding fund of any similar Institution.

The Bonuses paid on Claims in the Ten Years ending on the 31st December, 1859, exceeded **Three Millions and a Half**, being more than 100 per Cent. on the amount of all those Claims.

The amount added at the close of that decade to the Policies existing on the 1st January, 1860, was **£1,977,000**, and made, with former additions then outstanding, a total of **£4,070,000**, on Assurances originally taken out for **£2,552,000** only.

These additions have increased the Claims allowed and paid under those policies since the 1st January, 1860, to the extent of 150 per Cent.

The Capital at this time consists of

£2,730,000—Stock in the Public Funds.

£3,006,297—Cash lent on Mortgages of Freehold Estates.

£300,000—Cash advanced on Railway Debentures.

£23,590—Cash advanced on security of the Policies of Members of the Society.

Producing annually, **£221,482**.

The total Income exceeds **£400,000** per Annum.

POLICIES effected in the current year (1861) will participate in the distribution of Profits made in December, 1859, so soon as Six Annual Premiums shall have become due and been paid thereon; and, in the Division of 1869, will be entitled to additions in respect of every Premium paid upon them from the year 1862 to 1869, each inclusive.

On the surrender of Policies, the full value is paid, *without any deduction*; and the Directors will advance *nine-tenths* of that value as a temporary accommodation, on the deposit of a Policy.

No extra Premium is charged for service in any Volunteer Corps within the United Kingdom, during peace or war.

A Weekly Court of Directors is held every Wednesday, from 11 to 1 o'clock, to receive Proposals for New Assurances; and a Short Account of the Society may be had on application personally, or by post, from the Office, where attendance is given daily, from Ten to Four o'clock.

ARTHUR MORGAN, Actuary.

UNITED KINGDOM LIFE ASSURANCE COMPANY,

8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.

CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to **£730,665 7s. 10d.**, all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

Deputy-Chairman—CHARLES LUSHINGTON, Esq.
John Bradbury, Esq. Charles Giffin, Esq. M.P.
Thomas Castle, Esq. Charles Good, Esq.
Richard Fall, Esq. Robert Ingham, Esq. M.P.
John Feltham, Esq. Charles Reed, Esq. F.S.A.
Joseph Freeman, Esq. Jonathan Thorp, Esq.
Charles Whitham, Esq.

Physicians.

J. T. Conquest, M.D. F.R.S. Thomas Hodgkin, M.D.
Bankers—Messrs. Brown, Janson & Co.; and Bank of England.
Solicitor—Septimus Davidson, Esq.
Operating Actuary—Charles Ansell, Esq. F.R.S.

MUTUAL ASSURANCE WITHOUT INDIVIDUAL LIABILITY.

Extracts from the Report of the Directors for the Year 1860:—

Number of new Policies issued during the year, 1860.	441,231	1	10
Assuring the sum of	16,063	15	7
Producing an Annual Income of	328,261	10	4
Making the total Annual Income, after deducting 50,112l. annual abatement in Premium	278,149	10	4
Total number of Policies issued, 33,573.			
Amount paid in Claims by the Institution	1,084,868	5	4
Amount of Accumulated Fund	1,996,895	14	11

The effect of the successful operation of the Society during the whole period of its existence may be best exhibited by recapitulating the declared surpluses at the four investigations made up to this time.

For the 7 years ending 1843 the Surplus was	222,074	11	5
.. 5 years .. 1847 ..	26,123	8	3
.. 5 years .. 1852 ..	332,061	18	4
.. 5 years .. 1857 ..	345,034	3	11

The next Division of Profits will be made up to the 30th of November, 1862. Policies effected prior to that date, if subsisting at the time of division, will participate in such profit for the time they may have been in force.

The Prospectus, with the last Report of the Directors, and with Illustrations of the profits for the five years ending the 30th November, 1857, may be had on application, by which it will be seen that the reductions on the premiums range from 11 per cent. to 24 per cent., and that in one instance the premium is extinct. Instances of the bonuses are also shown.

Members whose premiums fall due on the 1st of OCTOBER are reminded that the same must be paid within thirty days from that date.
Sept. 1861.

JOSEPH MARSH, Secretary.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY.—NOTICE OF REMOVAL.

NOTICE IS HEREBY GIVEN, that the BUSINESS of the above SOCIETY has been REMOVED from No. 14, WATERLOO-place to their new and more eligible premises, No. 101, CHANCERY-LANE, E.C.
C. L. LAWSON, Secretary.
Sept. 30, 1861.

THE MUTUAL LIFE ASSURANCE SOCIETY (A.D. 1834).

30, KING-STREET, Chancery, E.C., London.
Capital, from Premiums only, 355,000l.

SOLE LONDON AGENTS:
For the CITY—JOHN BENNETT, 63, Cornhill.
For the WEST—B. ARNOLD, 72, Baker-street.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective instrument in the treatment of HERNIA.

The use of a steel spring, so often hurtful in its effects, is here avoided: a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive Circular may be had, and the Truss (which cannot fail to be forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer.

Price of a Single Truss, 16s. 6d., 21s. 6d., and 31s. 6d.; postage, 1s. Double Truss, 31s. 6d., 42s. and 52s. 6d.; postage, 1s. 6d.

P. O. C. made payable to JOHN WHITE, Post-Office, Piccadilly.

ELASTIC STOCKINGS, KNEE-CAPS, &c.

For VARICOSE VEINS, and all cases of WEAKNESSES and SWELLINGS of the LEGS, SPLEENS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s. and 12s. each; postage 6d.

JOHN WHITE, Manufacturer, 223, PICCADILLY, London.

STOVES for ENTRANCE HALLS, SCHOOL

ROOMS, CHURCHES, &c. all made with fire-brick linings, and entirely free from the objections found to so many, which, from their liability to become overheated, are dangerous, and render the atmosphere offensive. These Stoves burn little fuel, may be heated with or without open fire, and to burn throughout the cold season, if required, without going out. Illustrated Prospectuses forwarded. FREDERICK EDWARDS & SON, General Stove and Kitchen Range Manufacturers, 49, GREAT MARLBOROUGH-STREET, W. For 20 years in Poland-street, adjoining.

THROAT AFFECTIONS and COUGHS are immediately relieved by allowing occasionally, one of Dr. LUGG'S PULMONIC WAFERS to dissolve in the mouth. They have a pleasant taste, and are sold by all druggists, at 1s. 1d., 2s. 6d. and 12s. per box. Beware of counterfeits.

STAINED GLASS WORKS, 44, CABBINGTON-STREET, Hampstead-road, London, N.W.

MORTLOCK'S CHINA WAREHOUSE, 250, OXFORD-STREET—SELLING OFF.—In consequence of the Marquis of Westminster's refusal to renew the Lease of the above Premises (in connexion with Park-street), JOHN MORTLOCK is anxious to decrease his RICH Stock, and is prepared to make a great allowance for Cash.—450, OXFORD-STREET, and 35, PARK-STREET, near Hyde Park.

LOCK-STITCH SEWING MACHINES, Manu-
factured by the WHEELER & WILSON Manufacturing Company, with Recent Improvements. Crystal Cloth Presser, new style Hemmer, Binder, Corder, &c. Offices and Sale Rooms, 130, REGENT-STREET, W. LONDON (late 408, Oxford-street). Instructions gratis to every Purchaser. The Lock-stitch Sewing Machine with a Hand, Foot, Bind, or Clutch, with great rapidity, answers well for ALL descriptions of work, is simple, compact, and elegant in design, the work will not unravel, and is the same on both sides; the speed is from 1,000 to 3,000 stitches per minute; a child 15 years old can work it, and the Machine is suitable alike for the Family or the Manufacturer. Illustrated Prospectus, with Testimonials, gratis and post free.

FOOTE'S PATENT UMBRELLA STAND,
preventing theft or mistake, simple, convenient, and inexpensive. Manufactured by the WHEELER & WILSON Sewing Machine Company. Offices—130, REGENT-STREET, WEST, LONDON. Illustrated Prospectus gratis and post free.

CAUTION.—SMEE'S SPRING MATTRESS.
TUCKER'S PATENT, or SOMMIER TUCKER. Comfortable, cleanly, simple, portable and inexpensive. Purchasers are respectfully warned against imitations and imitations, in which some of the general appearance of the SMEE'S SPRING MATTRESS is carefully preserved, but all its essential advantages are sacrificed.

WILLIAM SMEE & SONS, having now the entire of the Patent Right, are able to announce the following considerably

REDUCED SCALE OF PRICES.

Size No. 1 for Bedsteads 3 feet wide 25s. 0d.

" " " " " " 45s. 0d.

Other sizes in proportion. To be obtained of almost all respectable Upholsterers and Bedding Warehousemen.

SPECIAL NOTICE should be taken that each Spring Mattress bears upon the side the Label, "Tucker's Patent."

FENDERS, STOVES, FIRE-IRONS and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or excellence of workmanship. Bright Stoves, with ornamental ornaments of brass, 32. 15s. to 32. 10s.; Fenders, with standards, 7s. to 32. 15s.; Fire-irons, 2s. 15s. to 11s.; Ditto, with rich ornamental ornaments, from 2s. 15s. to 18s.; Chimney-pieces, from 11. 8s. to 80s.; Fire-irons, from 2s. 3d. to 4s. 4d.—The BURTON and all other PATENT STOVES, with radiating hearth-plates.

BEDSTEADS, BATHS and LAMPS.—WILLIAM S. BURTON has SIX LARGE SHOW-ROOMS devoted exclusively to the SEPARATE DISPLAY of Lamps, Baths and Metallic Bedsteads. The stock of each is at once the largest, newest and most varied ever submitted to the public, and marked at prices proportionate with those that have tended to make his establishment the most distinguished in this country.

Bedsteads, from 12s. 6d. to £30 0s. each.
Shower Baths, from 8s. 0d. to 25 0s. each.
Lamps (Moderateur), from 6s. 0d. to 45 10s. each.
(All other kinds at the same rate.)
Pure Colza Oil, 44s. per gallon.

CUTLERY, WARRANTED.—The most varied assortment of TABLE CUTLERY in the world, all warranted, is on SALE at WILLIAM S. BURTON'S, at prices that are remunerative only because of the largeness of the sales. 31-inch Ivory-handled table knives, with high shoulders, 12s. 6d. per dozen; dessert to match, 10s.; if to balance, 8d. per dozen extra; carvers, 4s. 3d. per pair; larger sizes, from 20s. to 27s. 6d. per dozen; extra fine Ivory, 32s.; if with silver ferrules, 30s. to 35s.; white-bone table knives, 10s. 6d. per dozen; carvers, 3s. 3d. per pair; black-bone table knives, 7s. 4d. per dozen; dessert, 6s.; carvers, 3s. 6d.; black wood-handled table knives and forks, 6s. per dozen; table steel, from 1s. each. The largest stock in existence of plated dessert knives and forks, in cases and otherwise, and of the new plated silver carvers.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY CATALOGUE may be had gratis, and free by post. It contains upwards of 400 Illustrations of his illustrious Stock of Sterling Silver and Electro-Plated Nickel Silver and Britannia Metal Goods, Dish-Covers, Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gasaliers, Tea-Trays, Urns and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room and Cabinet Furniture, &c., with Lists of Prices, and Plans of the Twenty large Show-rooms, at 30, Oxford-street, W.; 1, 1A, 3, 5, and 4, Newman-street; 4, 5, and 6, Fetter's-place; and 1, Newman-street, London.

THE BEST and CHEAPEST TEAS and COFFEES in England are to be obtained of PHILLIPS & CO., Tea-Merchants, 8, King William-street, City. Good strong useful Tea, 3s. 6d., 2s. 10d., 3s. and 4s.; rich Souchong, 3s. 6d., 3s. 10d., and 4s. Pure Coffee, 1s., 1s. 3d., 1s. 5d., 1s. 6d., and 1s. 8d. Tea and Coffee to the value of 40s. sent carriage-free to any railway station or market-town in England. A Price Current free. Superior quality and market-places. All goods carriage-free within eight miles of the City.

TEA.—DR. HASSALL'S ("The Chief Analyst
of the Sanitary Commission of the Lancet on Food") Report on the Teas and Coffees sold by Messrs. STRACHAN & CO. 36, Cornhill, London, E.C. Having purchased through my own agents, and in the ordinary way of business, a variety of samples of the several qualities of Tea and Coffee vended by Messrs. Strachan & Co., I have subjected the whole of them to Microscopical Examination and Chemical Analysis. The result of the examinations obtained was in the highest degree satisfactory. A full Report of the above Analysis, also List of Prices, can be had on application to Messrs. Strachan & Co. 36, Cornhill, E.C. London. Cards to all parts of London daily.

A MOST DESIRABLE BREAKFAST BEVERAGE.

EPPS'S COCOA,
(commonly called Epps's Homoeopathic Cocoa).

The delicious aroma, grateful smoothness, and invigorating power of this preparation, have procured its general adoption as a most desirable breakfast beverage. It is sold in 1 lb. tins, 1 lb. packets, at 1s. 6d. per lb., by Grocers everywhere.

SAUCE.—LEA AND PERRINS
beg to caution the Public against Spurious Imitations of their well-known

WORCESTERSHIRE SAUCE.

Purchasers should

ASK FOR LEA AND PERRINS' SAUCE,

Pronounced by Connoisseurs to be

"THE ONLY GOOD SAUCE."

* Sold Wholesale and for Export, by the Proprietors, Worcester, CRUSSE & BLACKWELL, London, &c. &c.; and by Grocers and Oilmen universally.

COCKLE'S ANTIBILIOUS PILLS for Indigestion, bile, sick headache, acidity, heartburn, flatulency, spasms, &c.—Prepared only by JAMES COCKLE, 18, New Ormond-street; and to be had of all Medicine Vendors, in boxes, at 1s. 1d., 2s. 6d., 4s. 6d., and 11s. each.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,
Prescribed by the most Eminent Medical Men throughout the world, as the safest, speediest and most effectual

remedy for CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DYSPEPSIA OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS. Is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., Physician to the British Embassy at Paris.—"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Sir HENRY MARSH, Bart. M.D., Physician in Ordinary to the Queen in Ireland.—"I consider Dr. de Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therefore agent of great value."

Dr. LAWRENCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.—"I invariably prescribe Dr. de Jongh's Oil in preference to any other, feeling assured that I am recommending a genuine article, and not a manufactured compound, in which the efficacy of this invaluable medicine is destroyed."

Dr. LANKESTER, F.R.S., Superintendent of the Food Collection, South Kensington Museum.—"I consider the Cod Liver Oil sold under Dr. de Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-Pints, 3s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE COMMISSIONERS:

ANSAR, HARFORD & CO. 77, Strand, London, W.C.

CAUTION.—Beware of proposed Substitutions.

E LAZENBY & SON respectfully announce to their customers the arrival of this Season's FOREIGN PRESERVED FRUITS—Apricots, Green Apples, Peaches, Strawberries, and other kinds, Crystallized and Glazed, Dried Cherries, Almonds, Muscatel Raisins, Figs, French and Elvas Plums, Normandy Pippins, Valencia and Sultan's Raisins, Currants, &c. They also take the opportunity of recommending to notice their Stances, Pickled Jam, Tart Fruits, Teas, Cocoa, Beans, Spice, Soaps, Colza, and other Oils, Candles, and General Groceries, all of which will be found of superior quality.

6, EDWARDS-STREET, PORTMAN-SQUARE, LONDON, W.

WHEN YOU ASK FOR GLENFIELD PATENT STARCH, SEE THAT YOU GET IT, AS INFERIOR KINDS ARE OFTEN SUBSTITUTED. WOTHERSPOON & CO., GLASGOW AND LONDON.

ALL FOREIGN MEDICINES, Medicinal
Plants, Chemicals, &c. may be obtained of AUGUSTUS WHITBURN (late Grignon), Foreign Chemist, 174, REGENT-STREET, opposite Burlington-street. Preparations of the United States, French, Italian and German Pharmacopoeias.—West End Agent for Mr. Jeffrey's Respirators.

CONVULSIONS IN TETHERING.

MRS. JOHNSON'S AMERICAN SOOTHING SYRUP.—This efficacious Remedy has been in general use for upwards of Thirty Years, for the preservation of numerous Children when suffering from Convulsions arising from painful Dentition. As soon as the Syrup is rubbed on the Gums, the Child will be relieved, the Gums cooled and the inflammation reduced. It is as innocent as effaceous, tending to produce the Teeth with ease; and so pleasant, that no Child will refuse to let the Gums be rubbed with it. Parents should be very particular to ask for JOHNSON'S AMERICAN SOOTHING SYRUP, and to notice that the Names of BARCLAY & SONS, 90, FARRINGTON-STREET, London (to whom Mrs. Johnson has sold the Recipe), are on the Stamp affixed to each Bottle. Price 3s. 6d. per Bottle.

BLAIR'S GOUT and RHEUMATIC PILLS.

Price 1s. 1d., and 3s. 6d. per box.
This Preparation is one of the benefits which the Science of Modern Chemistry has conferred upon Mankind; for, during the first twenty years of the present century, to speak of a Cure for the Gout was considered a romance; but now the efficacy and safety of this Medicine are so fully demonstrated, by unselected testimonials from persons in every rank of life, that Public Opinion proclaims this as one of the most important Discoveries of the Present Age.

These Pills require no restraint of diet or confinement during their use, and are certain to prevent the disease attacking any vital Organ.

Sold by all Medicine Vendors, and at 229, Strand, London.

METCALFE, BINGLEY & CO.'S New Pat-
tern Brushes, and Penetrating unbleached Hair Brushes, Improved Flesh and Cloth Brushes, and genuine Smyrna sponges, and every description of Brush, Comb, and Perfumery. The Teeth Brushes search between the divisions of the Teeth—the hairs never come loose. M. B. & Co.'s New and Delicious Perfumery. The quality of the Perfumery is such, that it can be used in bottles, 3s., 3s. 6d., and 5s. each. Metcalfe's celebrated Alkaline Tooth Powder, 2s. per box.—Sole Establishment, 130a and 131, OXFORD-STREET.

FOR DEAFNESS, arising from the accumulation of Cerumen, SAVORY & MOORE'S PATENT EAR DOUCHE is a valuable substitute for ordinary Syringes. Patients use it without pain, and the possibility to reach the interior of the Ear and the splashing and inconvenience attending the use of Syringes are entirely obviated.—SAVORY & MOORE, Chemists to the Queen, 143, NEW BOND-STREET, LONDON.

MANUFACTURERS OF IMPROVED ENEMAS.

MESSRS. J. & R. MCCRACKEN, FOREIGN
AGENTS, and AGENTS to the ROYAL ACADEMY, 7, Old Jewry, beg to remind the Nobility, Gentry, and others, that they continue to receive Consignments of Objects of Fine Arts, Baggage, &c. from all parts of the Continent, for clearing through the Custom House, &c.; and that they undertake the shipment of effects to all parts of the world. Lists of their Correspondents abroad, and every information may be had on application at their Office, as above. Also, in Paris, of M. M. CHENEY, 24, Rue Croix des Petits Champs (established upwards of fifty years), Packer and Custom-House Agent to the French Court and to the Musée Royal.—Messrs. J. & R. M.C. have added to their other business that of EAST INDIA AGENCY in all its branches.

DINNIFORD'S PURE FLUID MAGNESIA
has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally approved by the Public, as the Best Remedy for acidity of the stomach, heartburn, headache, gout and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Effervescent Draught, in which its Aperient qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by DINNIFORD & CO., 178, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

CAPTAIN WHITE'S
CURRY or MULLIGATAWNY PASTE,
Curry Powder, Curry Sauce, and Oriental Pickle, may be obtained of all Sauce Vendors, and of the whole of
GROSSE & BLACKWELL, Paragon to the Queen,
Soho-square, London.

DURABILITY OF GUTTA-PERCHA

TUBING.—Many inquiries having been made as to the Durability of Gutta-Percha Tubing, the Gutta-Percha Company has pleasure in giving publicity to the following:—From SIR RAYMOND JARVIS, Bart., VENTNOR, Isle of Wight.—Second Testimonial.—March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta-Percha Tubing for Pump Service, I can state with much satisfaction, that the perfect Many butlers, and other persons, had lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here.—N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on the Gutta-Percha Tubing.

THE GUTTA-PERCHA COMPANY, PATENTEES,
13, WHARF-ROAD, CITY-ROAD, LONDON.

Bell & Bradfoot, Edinburgh;—for IRELAND, Mr. John Robertson, Dublin.—Saturday, November 3, 1861.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1776.

LONDON, SATURDAY, NOVEMBER 9, 1861.

PRICE
THREEPENCE
Stamped Edition, 4d.

NOTICE.

The price of THE ATHENÆUM from October 5 is THREEPENCE.

Thirty years ago, when THE ATHENÆUM came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price, and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing the size of the paper without increase of price, until the average has become ninety-six columns—double its former size.

The Proprietors, taking advantage of the abolition of the Paper Duty, therefore resolved that the price of THE ATHENÆUM should from October 5 be THREEPENCE.

SANSKRIT.—PROFESSOR GOLDSTÜCKER will meet his Classes, in order to appoint days and hours for his Lectures, on Monday, November 11, at Four o'clock, P.M.
EDWARD SPENCER BEESLY, A.M., Dean of the Faculty of Arts and Laws.

NEWSPAPERS FOR SALE.
C. MITCHELL & Co., Agents for the Sale and Transfer of Newspaper Property, have for DISPOSAL the following eligible Properties:
1. A most Influential Weekly LIBERAL PAPER, established over 70 years, which has also a mid-weekly penny issue, and a very good Jobbing Printing Business attached. The Circulation of the Paper is extensive, and the Advertising Connection of a most select description—at present averaging over 300 per week, which amount might be largely increased under energetic management. The Plant, consisting of Machine, Type, Office-furniture, &c., all in good condition. This would be found a most valuable Property to a Gentleman understanding Newspaper Management. Only a Portion of the Purchase-money need be paid down at once.

2. A Well-established LIBERAL WEEKLY NEWSPAPER, in a most thriving and largely-populated seaport Town, having a good Circulation and an excellent Advertising Connection,—has been established over 40 years. The Plant in good condition, with Napier's Machine, &c. Price required for Plant and Copyright, about 8000. to 9000.

TO NEWSPAPER PROPRIETORS.—C. MITCHELL & Co. beg to notify that they always have on their Registry well-qualified Editors, Sub-Editors and Reporters. 12 and 13, Red Lion-court, Fleet-street, London, E.C.

The Great Sale of Illustrated and Illuminated Books.

SOUTHGATE & BARRETT will sell by AUCTION, at their Rooms, 23, Fleet-street, on MONDAY, November 18, and five following days (Saturday and Sunday excepted), the Entire Remaining Copies of Valuable and Choice

ILLUSTRATED AND ILLUMINATED WORKS.

Children's Books and others, adapted for presentation, let to suit Large and Small Buyers, the following, amongst a variety of others, are included in this Sale.

The ART OF ILLUMINATING, as practised in Europe from the Earliest Times, illustrated by Borders, Initial Letters, Alphabets, &c., selected from the British Museum, South Kensington Museum, and other important Collections. By W. THOMAS, with an Essay on the Art, and Instructions as to its Practice in the Present Day. DIBOT WYATT. 4to. splendidly bound (published at 1*l.* 10*s.*).

"* This magnificent and eminently serviceable work contains 102 Plates, all fully illuminated, and printed in colours and gold on vellum paper, and 104 pages of Text, surrounded by borders in colours. Containing the various specimens of letters and borders given in the 102 pages, there will be found 1,000 illuminated Figures.

PARADISE and the PERI. By THOMAS MOORE. 54 splendidly illuminated pages, small folio, elegantly bound, bevelled boards (published at 2*l.* 2*s.*).

"Moore's 'Paradise and the Peri,' gorgeously illuminated by Messrs. Owen Jones and H. Warren, executed on stone by Mr. Albert Warren, and published by Day & Son, &c. Mr. Owen Jones has produced some of the most magnificent combinations of colour and design we remember to have seen. His borders are all dazzling, and many of exquisite beauty." Athenæum.

NOW FIRST PUBLISHED.

The PENITENTIAL PSALMS, richly illuminated. A small Volume illuminated with magnificent Borders on every page. The Illuminations, both Borders and Miniatures, are Fac-similes, or adaptations, from the most remarkable pages of celebrated illuminated manuscripts in the British Museum, the Bibliothèque Impériale, and other collections. By NOEL HUMPHREYS, Esq.

The whole reproduced by Messrs. Day & Son, in the most finished style of Chromo-lithography, under the direction of H. Noel Humphreys.

SCULPTURE IN MARBLE, TERRA-COTTA, BRONZE, IVORY, and WOOD. Selected from the Royal and other Collections. Edited by J. B. WARRING. 18 Chromo-lithographic Plates of the highest style of finish, and 21 Wood Engravings. 1 vol. folio, half-bound elegant, published at 2*l.* 10*s.*

RICHARDSON'S MONASTIC RUINS OF YORKSHIRE, containing upwards of 30 large and beautifully-tinted Views, together with the various Fignettes, Ground-plans, Details, Sections, and Arms of each Abbey. The complete Work, in 15 folio Parts, published at 12*l.* 12*s.*

"Few works of lithographic Art have equalled this publication, and it would be difficult to point out any by which it has been surpassed. The subject-matter can hardly be said to be a local one, because the history of the places illustrated is, in fact, so intimately connected with the general history of England, that all Englishmen must feel an interest in what is described." Times.

The GRAMMAR OF ORNAMENT. By OWEN JONES. Being a Series of 2,000 Examples from various styles, exhibiting the Fundamental Principles which appear to reign in the composition of Ornament of every period; 101 Imperial Folio Plates, elaborately printed in colours and gold, and published at 12*l.* 12*s.*

POTTERY and PORCELAIN. Selected from the Royal and other Collections. Edited by J. B. WARRING. 18 Chromo-lithographic Plates of the highest style of finish, and 10 Wood Engravings. 1 vol. folio, half-bound elegant, published at 2*l.* 10*s.*

ORNAMENTAL ART IN GLASS and ENAMEL. Selected from the Collections of the Duke of Buccleuch, &c. Edited by J. B. WARRING. 17 Chromo-lithographic Plates of the highest style of finish, and 10 Wood Engravings. 1 vol. folio, half-bound elegant, published at 2*l.* 10*s.*

METALWORK and JEWELLERY. Selected from the Royal and other Collections. Edited by J. B. WARRING. 17 Chromo-lithographic Plates of the highest style of finish, and 10 Wood Engravings. 1 vol. folio, half-bound elegant, published at 2*l.* 10*s.*

DECORATIVE ART IN FURNITURE. Selected from the Royal and other Collections. Edited by J. B. WARRING. 15 Chromo-lithographic Plates of the highest style of finish, and 14 Wood Engravings. 1 vol. folio, half-bound elegant, published at 2*l.* 10*s.*

ROBERTS'S SKETCHES in the HOLY LAND, SYRIA, JUDEA, ARABIA, EGYPT, and NUBIA, with Historical and Descriptive Notices by the Rev. Dr. CHOY. The Library Edition, 6 vols.

QUESTIONS FOR THE AGE.

"Was Mohammed a man of pure morals, and also a true Prophet and sincere religious reformer equally with the Jewish and Christian Prophets? Is the practice of magic and strategy by ancient Prophets to be reconciled with their general probity, and was such practice in their times universally esteemed a legitimate mode of religious warfare? Were 'pious frauds' which Origin and other eminent Fathers sanctioned in the struggle against Paganism, employed also in the Christian Church at the very period of its foundation under the direction of a Messianic Confederacy headed by Joseph the Arimathea, who contended with the Rabbinical power, and endeavoured by forced fulfilments of Scripture to establish in Judea the anticipated Saint Kingdom of the Asoties? Are there any grounds for believing that Jesus was a voluntary martyr, moved by the magic and persuasion of pseudo-sectaries, and that the chief members of the sanhedrin were victims of a conspiracy, and as innocent of contriving his death as the Jews of later times have been innocent of crucifying children and insulting the consecrated Host? Are great nations and churches subject to a regular growth and development analogous to that of individual men? have they to pass through a similar amount of educational discipline to be fitted for freedom? and are they, any more than eminent individuals, to be reproached for the errors and superstitions of their infancy? Is there any prospect of a reconciliation being effected between enlightened Jews, Christians and Moslems on the basis of pure Theism, which shall conduce to the regeneration of the East?"—*Vide New Koran*, Q. xl., xxx.—xxxviii., &c.; Q. xii.—xlvii., &c.

THE NEW KORAN of the PACIFICAN FRIENDHOOD; or, Text-Book of Turkish Reformers, in the Teaching and Example of their esteemed Master, Jaidi Morata. Just published, in fcap. 8vo. 570 pp., with Map of Confederated Europe, 7s. 6d.

MEMOIR OF GEORGE WILSON,

M.D. F.R.S.E.,

Regius Professor of Technology in the University of Edinburgh, and Director of the Industrial Museum of Scotland.

By his Sister, JESSIE AITKEN WILSON.

"His was the poetic eye, whose alchemy could transmute the most leaden look of things to a golden smile. Nothing was so commonplace but that he could lift up the film of familiarity, and give to it some gleam of beauty. The story of science was a fairy tale, indeed, when heard from him, so rare and felicitous an illustration was he."

MACMILLAN & CO. Cambridge; and 23, Henrietta-street, Covent-garden, London.

On the 15th of November will be published, in 1 vol. 8vo. of about 500 pp., 60 Woodcuts, 4 Tinted Lithographs, and 3 Maps,

London: WM. H. ALLEN & Co. 7, Leadenhall-street.

MR. STANFORD'S RECENT PUBLICATIONS.

B O O K S.

1.
DEPOSITION of LEAD ORE in VEINS.

The LAWS WHICH REGULATE the DEPOSITION of LEAD ORE in VEINS. Illustrated by an Examination of the Geological Structure of the Mining District of ALSTON MOOR. By WILLIAM WALLACE.

2.
THE COAL-FIELDS of GREAT BRITAIN:

their History, Structure and Resources; with Notices of Coal-fields in other Parts of the World. By EDWARD HULL, B.A., of the Geological Survey of Great Britain, F.G.S.
"A most intelligent, careful and scholarly description of all the coal-fields of the world, undisturbed by pedantic technicalities or assumption, and conveyed in good, honest, English wording, in a style so agreeable as to elevate a very dry subject into positively agreeable reading."

3.
RECOLLECTIONS of A. N. WELBY PUGIN,

and HIS FATHER, AUGUSTUS PUGIN; with Notices of their Works. By BENJAMIN FERRIS, Architect, F.R.I.B.A. With an Appendix, by E. SHERIDAN PURCELL, Esq.
"Abundant knowledge and warm interest in his subject entitled Mr. Ferris to write Welby Pugin's life: and he has written it with an unaffected heartiness, deserving of the warmest praise; and as to all essentials—as in dealing with the religious element in the life of one who was a convert to Catholicism—with good feeling and great tact."—*Examiner*.

4.
QUEENSLAND, AUSTRALIA, the FUTURE

COTTON-FIELD of GREAT BRITAIN, and a HIGHLY ELIGIBLE FIELD for EMIGRATION: with a Disquisition on the Origin, Manners and Customs of the Aborigines. By JOHN DUNMORE LANG, D.D. A.M.

"Dr. Lang having exerted himself, unweariedly and with success, to procure the separation of Moreton Bay from New South Wales, and the foundation of the Colony of Queensland, and having received the thanks of the Legislature of the New Colony, transmitted through Sir George Bowen, the Governor, now in this volume, describes its attractions to his countrymen. Whatever Dr. Lang does is done thoroughly: accordingly we have here a complete account of the colony in all its aspects and capabilities."—*Daily News*.

5.
NEW ZEALAND—THE BRITAIN of the

SOUTH; with an Appendix on the Native War in New Zealand, and our Future Native Policy. A New Edition, thoroughly revised and corrected to the Present Time. By CHAS. HURSTHOUSE.
"In this new edition of Mr. Hursthouse's useful guide, he has brought up the information to the present time in statistics and political geography, and has added a long chapter on the Native War, with an appendix containing much valuable information relating to it."—*Economist*.

6.
GUIDE to the ARMY-COMPETITIVE EXA-

MINATIONS: being a Compendium of Practical Hints for Candidates, with reference to Schools, Allowances, Outfits and other Expenses, together with Extracts from the Examination Papers, Official Rules and Regulations, and all other necessary information. By Capt. A. H. HUTCHINSON, Royal Artillery, late Subaltern Officer, Royal Military Academy, Woolwich.

7.
EAST INDIA CIVIL SERVICE EXAMINATION PAPERS for 1861.8.
THE NORTH-WEST PASSAGE, and the

PLANS for the SEARCH of SIR JOHN FRANKLIN: a Review. Second Edition, with a Sequel, including the Voyage of "The *Polaris*," together with Fac-simile of the Record found at Point Victory. By JOHN BROWN, F.R.G.S.
"A complete epitome of Arctic discovery."—*Nautical Magazine*.
"An able epitome of all the efforts which have been made, as well as the theories which have been formed."—*Sir Roderick I. Murchison's Address to the Royal Geographical Society*.

THE SEQUEL, with Fac-simile of the Record, can be had separately, in cloth, price 2s. 6d.

9.
STANFORD'S NEW LONDON GUIDE; con-

taining full Information respecting Public Conveyances, Hotels, Dining-Rooms, Postal and other Communications, Topography, Municipal and other Divisions, Statistics, Public Works, History, Antiquities, Public and Private Buildings, Law Courts, Club-Houses, Markets, Theatres and other Places of Public Amusement, Churches and Chapels, Literary and Scientific Institutions, Museums and Galleries of Art, together with Excursions on the Thames, the Environs, &c.

"A good book, both as to convenience of size and intelligibility of information. The Maps—one of London, and one of its environs—great features in books for the guidance of strangers, are excellent. The compiler merits commendation for his pains; he has produced a genuine *valde-mecum*, which visitors to, and, indeed, sojourners in, the Metropolis will not fail to appreciate."

10.
CATHEDRALS of the UNITED KINGDOM;

their History, Architecture and Traditions; Notices of their Eminent Ecclesiastics and the Monuments of their Illustrious Dead. Also, Short Notes on the Objects of Interest in each Cathedral City, and a Popular Introduction to Church Architecture. By MACKENZIE WALCOTT, M.A.

"A cheap, portable, orthodox guide, terse, clear and faithful, based on good and recent authorities."—*Athenæum*.

Also, by the same Author, uniform with the above, price 4s.
MINSTERS and ABBEY RUINS of the UNITED KINGDOM.

M A P S.

1.
UNITED STATES of NORTH AMERICA.—

STANFORD'S NEW RAILWAY and COUNTY MAP, on Two Large Sheets, constructed from the most reliable Authorities.
Each Sheet can be had separately, price, Coloured, 10s. 6d.; or, Mounted in Case, 12s.
The EASTERN SHEET, containing the Atlantic and Mississippi States, and the WESTERN SHEET, California and the Territories on the Pacific.

2.
AUSTRALIA.—Stanford's New Map; com-

plied from the latest and most authentic Documents, embracing all the recent Surveys of Messrs. STUART, GREGORY, STURT, KENNEDY, and others; engraved in the finest style

3.
LONDON and its SUBURBS.—Stanford's

LIBRARY MAP, on the Scale of 6 inches to a mile, constructed on the basis of the Ordnance Block Plan, thoroughly revised and completed from actual surveys specially undertaken for the purpose, with details of Public Buildings, Parks and various Estates, from original documents. To describe all the particulars which are embraced in this Map, with a view of making it perfect for administrative and other practical purposes, would exceed the limits of this Advertisement, and will form the subject of an introductory Notice. The Map is engraving in the highest style of Art, on 24 Steel Plates; the size of each sheet will be 15½ inches by 13 inches inside the border, and they will be sold separately, or combined in any way to form Maps of Parishes, Districts or Residential Environs. The complete Map measures 5 feet 2 inches by 6 feet inside the border, and is designed to form one of Stanford's Library Maps. It is, therefore, well adapted for suspension and reference in Public Offices, Libraries, &c. The whole work in plain sheets in a Portfolio, 24s.; or Coloured, 42s. 6d. It may likewise be bound as an Atlas. The sheets joined together, Coloured and mounted on Canvas, with Rollers and Varished, 52. 10s.; or folded in a Morocco Case at the same price. Mounted on Spring Rollers, 42. 14s. 6d. Single Sheets, 1s. each plain, or 1s. 6d. Coloured. [Nearly ready.]

4.
NEW SERIES of SCHOOL MAPS,

Prepared for the Society for Promoting Christian Knowledge, and the National Society.
EUROPE.—Scale, 65 miles to an inch; Size, 4 feet 10 inches by 4 feet 3 inches. Price, mounted on canvas and roller, varished, 12s.

The outline is carefully drawn, and is very distinct. The great rivers, too, are easily traceable at a glance. The mountains are accurately engraved; all the most important Passes of the Alps are indicated; and the highlands in the neighbouring parts of Asia and Africa are delineated to show their relation to the European systems. The Political Divisions are boldly marked according to the most recent changes. Each of the smaller Continental Kingdoms is separately coloured, while the German Principalities are distinguished by a uniform tint. Great pains have been taken to examine all names that are not of service in a Map for elementary purposes. The sites of great battles and other important historical events are distinguished from places of mere geographical interest.

* Maps of Palestine, England and Wales, and Asia, uniform with the above, will be published in a short time.

5.
ENGLAND and WALES.—STANFORD'S

PORTABLE MAP, with the Railways very clearly delineated—the Cities and Towns distinguished according to their Population, &c.—and the Mountains and Hills carefully reduced from the Ordnance Survey. Price, coloured and mounted, in case, 5s.; roller, varished, 6s.

6.
MAP of the BRITISH COAL-FIELDS,

showing the Extension and Depth of the Coal Formation. By EDWARD HULL, B.A. F.G.S.

7.
EUROPE.—STANFORD'S PORTABLE MAP,

showing the latest Political Boundaries, the Railways and Submarine Telegraphs. Price, full coloured and mounted, in case, 10s.; on rollers, varished, 14s.

8.
STANFORD'S SERIES of LARGE MAPS,

adapted alike for the Library or Counting-house, measuring about 6 feet by 5 feet.

EUROPE.—Scale, 50 miles to an inch. Price, coloured and mounted, in morocco case, 31. 13s. 6d.; roller, varished, 31.; spring roller, 61.

ENGLAND and WALES.—Scale, 5 miles to an inch. Price, coloured and mounted, in morocco case, 31. 12s. 6d.; roller, varished, 31. 4s.; spring roller, 61. 6s.

SCOTLAND.—Scale, 5½ miles to an inch. Price, coloured and mounted, in morocco case, 31. 2s.; roller, varished, 31. 13s. 6d.; spring roller, 51. 5s.

IRELAND.—Scale, 4 miles to an inch. Price, coloured and mounted, in morocco case, 31. 2s.; roller, varished, 31. 10s.; spring roller, 41. 14s. 6d.

UNITED STATES.—Scale, 54½ miles to an inch. Price, coloured and mounted, in morocco case, 31. 12s. 6d.; roller, varished, 31.; spring roller, 61.

AUSTRALASIA.—Scale, 50 miles to an inch. Price, coloured and mounted, in morocco case, 31. 12s. 6d.; roller, varished, 31.; spring roller, 61.

* Asia, America, and Africa, to form Companion Maps to the above, are in progress.

MEMOIRS, LETTERS and REMAINS

of ALEXIS DE TOCQUEVILLE. Translated from the French by the Translator of 'Napoleon's Correspondence with King Joseph.' With large Additions.

"The appearance of this book in an English dress will be welcomed by every politician and every Englishman capable of appreciating exhaustive and solid thought..... We do not know another writer, unless it be Pascal, who leaves precisely the same impression."—*Spectator*.

"Few men of the 19th century have exercised a more remarkable influence..... Charming as specimens of style, but they are of infinitely greater value, as showing the inner life of a man who was as simple as a child, and yet as gifted as any of the many learned writers and scholars whom France has produced."—*Bell's Messenger*.

and Copyright Articles, illustrated with numerous Engravings.
Price 6d. Monthly. Back Numbers are all reprinted.

London: Ward & Lock, 158, Fleet-street.

This day, Vol. III. price 5s. 6d.; also Binding Cases, 1s.

TEMPLE BAR:

A LONDON MAGAZINE for TOWN and COUNTRY
READERS.

Edited by G. A. SALA.

London: Ward & Lock, 158, Fleet-street.

On the 1st and 15th of every Month, in fcap. 8vo. paper covers,
in the French Style of Binding,

THE SHILLING VOLUME LIBRARY.

The CHANCELLOR of the EXCHEQUER, when proposing the Repeal
of the Paper Duty, used as an argument for its removal the supe-
riority, both in paper and print, of French popular Literature over
the same class of works produced in England; and he attributed
the reason of this difference to the fact that paper was untaxed in
France, while it was taxed in England. Happily this distinction
no longer exists. On the 1st October paper became free of Tax-
ation. Therefore the

SHILLING VOLUME LIBRARY

is projected with the view of giving to the reading public the full
benefit of the abolition of the Paper Duty. Each book in the

SHILLING VOLUME LIBRARY

will present to the buyer the utmost possible value both in quan-
tity and quality.

The greatest care will be taken, so as to render the

SHILLING VOLUME LIBRARY

in all respects unexceptionable reading both for the young as well
as for the old.

The following will be ready on November 15:—

1. FAMILY CREDIT. By WESTLAND MAR-
STON.
2. WHICH WINS—LOVE OR MONEY!
By the Author of 'WHITEFRIARS.'
3. RECOLLECTIONS of a RELIEVING
OFFICER. By E. P. ROWSELL.
4. LADY LISLE. By M. E. BRADDON.

On December 1,

5. The ROUND of WRONG. By EDMOND
ABOUT. Translated by LASCELLES WRAXALL.
6. MEMOIRS of a LADY-IN-WAITING.

London: Ward & Lock, 158, Fleet-street.

WORKS BY WATTS PHILLIPS.

On December 1, fcap. 8vo. ornamental boards, price 2s.

MEMOIR OF LIEUT.-GEN. SIR RALPH ABERCROMBY, K.B., 1793—1801.

By his Son, JAMES LORD DUNFERMLINE.

"The life of such a man is well worth studying; and through
the judicious composition of this Memoir it may be studied easily.
The book has the unusual merit of not containing a superfluous
page."—*Saturday Review*, Oct. 19.

In 1 vol. demy 8vo. with Illustrations, price 3s. 6d.

OBSERVATIONS IN CLINICAL SURGERY.

By JAMES SYME,

Professor of Clinical Surgery in the University of Edinburgh.

Now ready, New Edition, 3 vols. fcap. 8vo. 15s.

HORÆ SUBSECVÆ.

By JOHN BROWN, M.D. F.R.S.E.

"Of all the John Browns, commend us to Dr. John Brown, the
physician, the man of genius, the humourist, the student of men,
women and dogs. By means of two beautiful volumes, he has
given the public a share of his by-hours, and more pleasant hours
it would be difficult to find in any life. Dr. Brown's master-
piece is the story of a dog called 'Rab.' The tale moves from the
most tragic pathos to the most reckless humour, and could not
have been written but by a man of genius. Whether it moves to
laughter or tears, it is perfect in its way, and immortalizes its
author."—*Times*, Oct. 21.

Just out, in 1 vol. fcap. 8vo. price 5s.

FRAGMENTS OF TRUTH;

Being the EXPOSITION of several PASSAGES of SCRIPTURE.

On the 25th of November will be published, in 1 vol. 4to. price 6s.

RAB AND HIS FRIENDS.

By JOHN BROWN, M.D.

With Illustrations by George Harvey, R.S.A.; J. Noel Paton,
R.S.A.; and J. B.

Early in December will be published, in 1 vol. folio,

BRITISH BIRDS DRAWN FROM NATURE.

By (J. B.) Mr. HUGH B. COCKBURN.

NEW STORY FOR GIRLS.

Nearly ready, fcap. 8vo. price 5s.

AUNT ALIE and her BELONGINGS.

By CATHERINE D. BELL,
Author of 'Cousin Kate's Story.'

With Illustrations, 1 vol. crown 8vo.

A SELECTION FROM DASENT'S POPULAR TALES FROM THE NORSE.

[December.

Edinburgh: EDMONSTON & DOUGLAS.
London: HAMILTON, ADAMS & CO.

NEW WORKS.

**THE CITY of the SAINTS; and

By RICHARD F. BURTON, Captain H.M. Indian Army;
H.B.M. Consul in West Africa. With Map and Illustrations.
8vo. 15s.

2.
**NARRATIVE of the WAR with
CHINA in 1860:** To which is added, the Account of a Short
Residence with the Tai-Ping Rebels at Nankin, and a Voyage
thence to Hankow. By Lieut.-Col. G. J. WOLSELEY, D.A. Quar-
ter-Master-General to the Expeditionary Force. With Portrait of
Sir J. Hope Grant, G.C.B. 8vo. 10s. 6d.

3.
**SKETCHES of the NATURAL HIS-
TORY of CEYLON:** With Narratives and Anecdotes illus-
trative of the Habits and Instincts of the Mammalia, Birds, Rep-
tiles, Fishes, Insects, &c., including a Monograph of the Elephant.
By Sir J. EMERSON TENNENT, K.C.S. LL.D. &c. With 23
Illustrations on Wood from Original Drawings. Post 8vo. 12s. 6d.

4.
**New Edition of Mrs. Piozzi's Memoirs,
with Additions.**

**AUTOBIOGRAPHY, LETTERS, and
LITERARY REMAINS of Mrs. PIOZZI (THRALE).**

WAR.** By the Rev. GEORGE W. COX, M.A., late Scholar
of Trinity Coll., Oxford; Author of 'Tales from Greek Mytho-
logy.' Fcap. 8vo. with many Woodcut Illustrations. [Just ready.]

7.
THE ROMANCE of a DULL LIFE.
By the Author of 'Morning Clouds' and the 'Afternoon of
Life.' Post 8vo. 3s. 6d.

"This novel is in every way
much above the average. It is
such a work as only a thought-
ful, refined woman of the world
(quite free from slavery to the
world's mistakes) could write
about a woman's heart and life.
It is written with that peculiar
sub-acid satire on men and
things which is so often the
outward expression of secret
tenderness and sad disappoint-
ment of soul. There is no bitter-
ness, no contempt in the philoso-
phy—only a repressed weariness
of set grey life; and a firm pro-
test against it, as a thing not to
be loved, and an equally firm
belief that life ought to be
greater and fuller—warmer and
of a brighter hue. Her charac-
ters are all drawn with a de-
cisive hand; they are as real as
the members of our own house-
hold. The heroine is drawn so
truthfully, and with such per-
fect finish of detail, that she
cannot be a mere creature of the
imagination." *Globe*, Nov. 4.

8.
**THE ALPS; or, Sketches of Life and
Nature in the Mountains.** By Baron H. Von BERLEPSCH.
Translated by the Rev. LESLIE STEPHEN, M.A. Fellow and
Tutor of Trinity Hall, Cambridge. With 17 fine Illustrations,
from the Original Designs of Emil Rittmeyer. 8vo. 15s.

9.
FOREST CREATURES. By CHARLES
BONER, Author of 'Chamois Hunting in the Mountains of
Bavaria,' &c. With 6 Illustrations in Lithography and 12 on
Wood from Drawings by Guido Hammer, of Dresden. Post 8vo.
price 10s. 6d.

10.
ISRAEL in EGYPT: a Poem. By
EDWIN ATHERSTONE, Author of 'The Fall of Nineveh,'
'The Handwriting on the Wall,' &c. 8vo. 12s.

11.
**LOVE the GREATEST ENCHANT-
MENT:** The Sorceries of Sin: the Devotion of the Cross.
From the Spanish of CALDERON. Attempted, strictly in Eng-
lish Assonants and other Imitative Verse, by D. F. MACCARTHY,
M.R.I.A. With Introductions and Notes, and the Spanish Text.
Crown 4to. 15s.

12.
**HISTORY, OPINIONS, and LUCU-
BRATIONS of ISAAC BICKERTAFF, Esq.** From the
Tales, by STEELE and ADDISON. With Introduction, Notes
and Illustrations by H. R. MONTGOMERY; and 11 Photo-
graphic Designs. Crown 8vo. 10s. 6d.

13.
**LECTURES FRANÇAISES; or, Ex-
tracts in Prose, from Modern French Authors.** With copious
Notes for the use of English Students. By LÉONCE STIEVE-
NARD, Principal French Master in the City of London School;
Second French Master in St. Paul's School; Lecturer on the
French Language and Literature in King's College. 12mo. 4s. 6d.

London: LONGMAN, GREEN, LONGMAN,
and ROBERTS.

HURST & BLACKETT'S WORKS FOR NOVEMBER.

The LIFE of Admiral Sir CHARLES

NAPIER, K.C.B.; with HIS CORRESPONDENCE. From
his Private Papers. By Major-General EILERS NAPIER.
2 vols. 8vo. with Portrait and Charts. 30s. [Now ready.]

"Sir Charles Napier will undoubtedly rank among the first of
our sea worthies. He has found a worthy biographer and chro-
nicle in the person of his Step-son. The biography abounds in
traits of character, and these are details of love, marriage and
home-life which contrast very pleasantly with the more exciting
scenes. The work is very honestly put together; without pen-
cance, it accomplishes much; bringing all the incidents of the
Admiral's life together, so as to create a story of great interest,
with much that is amusing for the general, and more that is
instructive to the professional reader."—*Athenæum*.

"This work is full of interest, not only to the sailor community
but to the general reader. The biographer, who really loved the
gallant sailor, follows his fortunes up and down the world with a
devotion which gives a zest to his narrative, and leads to that
abounding wealth of personal anecdote which is the charm of
biography."—*Globe*.

"The personal history of another of England's great sea-heroes
is sure to be warmly welcomed by the British public. This work
possesses an interest which will not pass away with the present
generation. We know of no books so likely to excite the enthu-
siasm of English youth as Southey's 'Life of Nelson' and those
'Memoirs of Admiral Napier.'"—*Daily News*, and these

The LIFE of J. M. W. TURNER, R.A.

From Original Letters and Papers furnished by his Friends
and Fellow Academicians. By WALTER THORNHURST.
3 vols. 8vo. with Portraits, &c. 30s. [Now ready.]

The OKAVANGO RIVER. A Nar-

rative of Travel, Exploration and Adventure. By CHARLES
JOHN ANDERSSON, Author of 'LAKE NGAMI.' 8vo.
with Portrait of the Author and numerous Illustrations. 21s.

"Mr. Anderson's book, from the number of well-told adven-
tures, its rich fund of information, and spirited illustrations, will
command a wide circle of readers. The interest of his story never
flags for a moment."—*Athenæum*.

LADY CHARLOTTE PEPPYS' DO-

MESTIC SKETCHES in RUSSIA. 2 vols. 21s.

"This very agreeable book presents a photograph of Russian
home-life, the simplicity of which is as charming as the manner
of relating it is attractive."—*Messenger*.

The SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare
and unpublished Documents, by Dr. CHALLICE. 3 vols.
with Portraits, 21s.

THE VALLEY of a HUNDRED

FIRES. By the Author of 'MARGARET' and her BRIDE-
MAIDS. Illustrated by J. E. MILLER, R.A. &c. bound
forming the New Volume of HURST & BLACKETT'S
STANDARD LIBRARY of CHEAP EDITIONS.

"Whether in delineation of character, in lucidity of plot, in
description of scenery, in representation of life as it is, or in sound
well-enforced moral, we know no novel of the last three or four
years to equal this production of the popular Author of 'Margaret
and her Bridemaids.' If asked to classify it, we should give it a
place between 'John Halifax' and 'The Cartons.'"—*Herald*.

THE NEW NOVELS.

SIR RICHARD HAMILTON.

2 vols. 21s.

"Women are strongest."

The HOME at ROSEFIELD. By

EDWARD COPPING. 3 vols.

"A very touching and life-like story, of great simplicity and
beauty; and hard indeed must be the heart unaffected by its
genuine tenderness and pathos."—*Daily News*.

COUNTY SOCIETY. 3 vols.

"We promise the reader a rich treat from the perusal of this
novel. The talent manifested is unquestionable."—*Messenger*.

NOTICE TO QUIT. By W. G. Wills,

Author of 'LIFE'S FORESHADOWINGS.' 3 vols.

"A novel of remarkable power. The interest never flags.
There is real genius in this writer."—*Spectator*.

LITERATURE

The History of Scottish Poetry. By David Irving, LL.D. Edited by John Aitken Carlyle, M.D. With a Memoir and Glossary. (Edinburgh, Edmonston & Douglas.)

AMONG the many valuable services which the late Dr. Irving rendered to modern literature, none was more commendable in itself and more calculated to be of lasting benefit to the student, than his attempt to write a somewhat exhaustive History of Scottish Poetry. It was his desire to do for Scotland what Warton, in his compendious volumes, had already done for England. The task, however, reduced itself in his case to narrower limits; for, in chronicling the birth and growth of Scottish Poetry, Dr. Irving had to deal only with one subdivision of the poetical literature of a nation. The result is now before us in a posthumous publication, which brings down the narrative to the beginning of the eighteenth century. On the whole, the attempt has been successful. The book has its bare intellectual merits, apart from the fact that it is the only work of the kind which deals at all satisfactorily with the subject; and not the least of those merits is the broad truth-loving and scholarly manner in which the author adopts and collates the suggestions of former writers. Dr. Irving was thoroughly impartial in his love for an important but somewhat neglected theme. He had few facts to bring forward, but he had novel deductions to draw from facts previously ascertained. His book will, consequently, have its value, if only as a work of occasional reference. Having thoroughly appreciated the weight of his materials, he digested those materials in a sensible way before putting pen to paper; and as he succeeded in writing in a healthy, philosophical spirit, the general positions he assumes are really unassailable.

The history commences with an elaborate disquisition, neither very original nor profound, on the origin of the Scoto-Saxon dialect, or the ancient language of the south of Scotland. The hypothesis that the language of the Picts was a dialect of the Celtic, the hypothesis of Geddes, Chalmers and Sir Walter Scott, and that the Picts were consequently a Celtic people, is met by Dr. Irving with the question—By what extraordinary means could a distinct race of men, placed in such circumstances, be induced to reject their original language and to adopt another? Admitting the possibility that the primitive population was composed of Celts, it is reasonably to be conjectured, when we call to mind certain suggestions of history, that the primitive inhabitants were supplanted in the south by new settlers—branches of the Scandinavian or some other Gothic tribe.

If this conjecture be admissible, we have a ready-made answer to all hypotheses founded on the fact that many Celtic names of places have been retained where the inhabitants have long ceased to speak the Celtic language. French was spoken at an early period in the court of Scotland, and French words soon found their way into popular use; and nothing is more obvious than the inference, that the language with which we find this French incorporated was not Celtic. Dr. Irving appears to agree with Pinkerton, that the Picts were not of Celtic, but of Scandinavian origin, and that, as a consequence, their language and that of the Saxons must have been two versions of the same original tongue. After exhausting a wealth of argument on this subject, he naturally

concludes that the southern population of Scotland derived their language from the Scandinavians, and that they may also be supposed to have derived their poetry from the same source. Then follows a brief examination of the origin of romances of chivalry. Here Dr. Irving differs little from Bishop Percy, in believing that the Scotch and English metrical romances of the Middle Ages had their origin in the historical ballads of the Gothic bards and scalds; but he has something to say relative to the theory which Warburton adopted from Salmasius, viz., that this romantic fabling was primarily borrowed from Arabia—a theory which both Percy and Tyrwhitt successfully attempted to demolish. Dr. Irving continues:—

“Other writers persuade themselves that Armoric was the cradle of romantic fiction; nor is this opinion entirely destitute of plausibility. The natives of that country were of a Celtic origin; and they are said to have afforded a place of refuge to a large colony of Britons, who, flying from their Saxon conquerors, carried along with them such historical records or traditions as they possessed. In this manner we may suppose the marvellous tales of King Arthur, and his Knights of the Round Table, to have been imparted to the early poets of France; and it is at least certain, that even the Norman poets frequently profess to have derived their stories from the lays of Armorica. It is not perhaps very safe to adopt any one of these hypotheses, to the exclusion of the other two; and Mr. Ellis is of opinion, that they are by no means incompatible. There is, as he conceives, no absurdity in supposing that the scenes and characters of romantic story were, to a great extent, derived from the Armoricans, or from the Welsh; that much of the colouring, and perhaps some particular adventures, may be of Scandinavian origin; and that occasional episodes, together with some portion of the machinery, may have been borrowed from the Arabians. ‘In fact,’ as he very ably remarks, ‘there is reason to believe that critics, in their survey of Gothic literature, as well as of Gothic architecture, have too hastily had recourse to a single hypothesis, for the purpose of explaining the probable origin of forms and proportions which appeared unusual, and of ornaments which were thought to arise from a wild and capricious fancy; and in both cases it will perhaps be found that invention is often nothing more than accidental association, and that what has been attributed to originality of design, was only the result of an awkward attempt to combine incongruous materials.’ Human nature is in all ages and in all countries essentially the same; and similar customs are to be traced among tribes of mankind the most widely removed from each other in time and place. When some modern writers described the process of tattooing, so prevalent among the savages of the present age, they were not perhaps aware that Herodotus had discovered the very same custom among the Thracians, and Xenophon among the Cappadocians. When we trace a similar vein of poetry in very remote regions, we must not in every instance impute this similarity to the force of imitation; the Scandinavians and the Arabians, without any mutual communication, might each devise their peculiar order of giants, dragons and enchantments; nor is it necessary to have recourse to the agency of the Crusades, in order to account for the propagation of those excrencences of imagination which seem to be the spontaneous production of almost every climate.”

Dr. Irving next proceeds to a close examination of the various theories relative to the origin and use of rhyme. He believes with Goldsmith, that rhymes are of older date than the Roman dactyl or spondee, and that the theory which describes them as an innovation on the poetry of the ancients, is inadmissible, because rhymes are to be found in the works of most of the classical poets. Were quotation necessary, instances might be multiplied to prove that Dr. Irving was right in adopting

the theory of the ‘Enquiry.’ Homer himself employed rhyme in other than accidental combinations; and Aristotle particularized this among the other merits of Homer’s poetry. So did Aristophanes, Euripides, Anacreon, Horace, Propertius and others. But perhaps the earliest example of the use of rhyme is to be found in the recurrence of similar sounds, which we find employed in the Old Testament. In the vernacular poetry of the northern nations, rhyme does not appear to have been introduced at a very early period. Olfrid, a monk of Weissenberg, composed a work in German rhyme about the year 870. Mr. Turner, however, has referred many Welsh rhythmical poems to as early a period as the sixth century. According to Tyrwhitt, rhyme was introduced into English poetry about the reign of Henry the Second, when Layamon, a priest, translated from the French of Wace a fabulous history of the Britons, entitled ‘Le Brut,’ which Wace himself had translated from the Latin of Geoffrey of Monmouth. The greater part of Layamon’s translation, by the way, is without rhyme and metre, thus resembling the old Saxon poetry; but it contains a number of short verses, of unequal length, though rhyming together pretty exactly; and in some places the French octosyllabic measure is successfully imitated. That the art of rhyming originated with the French provincial poets, or Troubadours, which has been asserted, is obvious absurdity. That it was rather a spontaneous combination of pleasing sounds, palpable to the fine ear in most languages, seems highly probable. It is to be remarked that rhyme has been too often confounded with rhythm; the less severe cadence of which latter depends on emphasis, instead of quantity, and which is not reducible to the laws of prosody. Perhaps the most extensive specimen of rhythmical versification occurs in the ‘Institutiones adversus Gentium Deos,’ by Commodianus, who is supposed to have lived about the year 270. But the same species of versification was also cultivated among the Greeks.

The poetry of Scotland, Dr. Irving justly observes, was only the poetry of one subdivision of a nation, neither remarkable for its antiquity, nor comprehending any considerable extent of population; but from the distribution of the soil, the successful cultivators of Scottish poetry were by no means few in proportion to the number of people who spoke the Scottish language. First on our list appears Thomas Rymour, more properly (we think) Thomas Learmont, who is popularly known as Thomas the Rhymer or Thomas of Erceuldoune. Erceuldoune is a village situated near Melrose, in the county of Berwick; and here, in a tower the ruins of which are still visible, Thomas is supposed to have flourished about the year 1280,—the date when he is said to have prophesied the death of Alexander the Third. He was generally supposed to possess the gifts of prophecy and divination. In this prophetic capacity, he is alluded to by Barbour, Bowser, Winton and many other early writers; and Leslie mentions him in connexion with “the wizard,” Michael Scot. His ‘Whole Prophecies of Scotland, England, Ireland, France and Denmark,’ which was first printed by Waldegrave in 1603, still continues to be hawked about his native land. But it is chiefly as the reputed author of the famous romance of ‘Sir Tristrem’ that Thomas of Erceuldoune is to be remembered. The manuscript copy of this romance, written on vellum and containing some forty poems and fragments of poems, the language of most of which is English, was presented to the Advocates’ Library in 1744, by

Alexander Boswell, Lord Auchinleck, then one of the Judges of the Court of Session.

Dr. Irving's way of accounting for the numerous English phrases which occur in 'Sir Tristrem,' viz., that some English copyist changed the language from Scotch into English as he wrote, is as ingenious as it is inadmissible. The truth is, Thomas the Rhymer's claim to the authorship cannot be supported by anything like satisfactory evidence. The very first stanza mentions Thomas in the third person; and the language is indisputably English. Nor, even, on the bold hypothesis of Sir Walter Scott, can we ascribe to Thomas the authorship of another metrical romance, 'Horn Child; or, the Geste of Kyng Horn,' the language of which is certainly Saxon, and which Bishop Percy could not refer to a later period than within a century after the Conquest. More reasonably may we affiliate on him the singular production entitled 'Thomas off Erseldoune,' three different manuscripts of which have been preserved. The author writes sometimes in the first and sometimes in the third person, but the name of Thomas repeatedly occurs.

We should have wished to devote space to a detailed account of the romance of 'Sir Tristrem,' but we find ourselves compelled to refer the reader to Dr. Irving. The romance, by whomsoever written, is one of great beauty. The subject is the popular one. Tristrem, whom the French and Germans call Tristan, is one of the popular heroes of romance, and his adventures were sung far and wide in the Middle Ages. The tale was at length extended and modified into a prose romance, originally written in French, and afterwards translated into Spanish and Italian. Sir Tristrem was sung by the Continental poets long before the birth of Thomas the Rhymer. He is a prominent character, it will be remembered, in the 'Morte d'Arthur,'—a volume compiled, by Sir Thomas Malory, from the French romances.

"Besides Sir Tristrem," says Sir Walter Scott, "there still exist at least two Scottish romances which, in all probability, were composed long before the conclusion of the thirteenth century. They are entitled 'Gawen and Gologras' and 'Galan of Galoway.' Dr. Irving ascribes these poems to the fourteenth, instead of to the thirteenth century, arguing their close resemblance in language, diction and structure of stanza, to the 'Pystyl of Swete Susan,' a poem which Winton ascribes to one Huchowne, supposed to be "the gude Schir Hew of Eglintoun" mentioned by Dunbar. Both these romances celebrate the exploits of Arthur and the Knights of the Round Table. They are written in intricate rhymes, full of alliterative versification. Another poem of the same age is entitled 'The Taill of Rauf Coilzeir, how he harbreit King Charles,' the subject of which resembles a well-known adventure of the Gudeman of Ballangeich.

We next come to John Barbour, Archdeacon of Aberdeen, the contemporary of Chaucer. Barbour's great work is 'The Bruce,' the earliest known edition of which was published at Edinburgh in 1616. Dr. Irving acknowledges the literary merits of this poet:—

"Barbour was evidently skilled in such branches of knowledge as were then cultivated, and his learning was so well regulated as to conduce to the real improvement of his mind: the liberality of his views and the humanity of his sentiments appear occasionally to have been unconfined by the narrow boundaries of his own age. He has drawn various illustrations from ancient history, and from the stories of romance, but has rarely displayed his erudition by decking his verses with the names of ancient authors: the distichs of Cato, and the spurious productions of Dares Phrygius and Dictys Cretensis are the only profane books to which he

formally refers. He has borrowed more than one illustration from Statius, who was the favourite classic of those times, and who likewise appears to have been the favourite of Barbour. The more chaste and elegant style of Virgil and Horace was not so well adapted to the prevalent taste, as the strained thoughts and gorgeous diction of Statius and Claudian. The manner in which he has incidentally discussed the subject of astrology and necromancy, may, I think, be specified as not a little creditable to his good sense. It is well known that these branches of divination were assiduously cultivated during the ages of intellectual darkness. The absurdity of astrology and necromancy he has not openly attempted to expose; for as the opinion of the many, however unfounded in reason, must not be too rashly stigmatized, this might have been too bold and decided a step. Of the possibility of predicting events he speaks with the caution of a philosopher; but the following passage may be considered as a sufficient indication of his deliberate sentiments:—

And sen that ar in sic wenyng,
For owyne certante off wiling;
Me think, quha says he knows things
To cum, he makys gret gabingis.

To form such an estimate, required a mind capable of resisting a strong torrent of prejudice; nor is it superfluous to remark, that in an age of much higher refinement, Dryden suffered himself to be deluded by the prognostications of judicial astrology. It was not however to be expected that Barbour should on every occasion evince a decided superiority to the general spirit of the age to which he belonged. His terrible imprecation on the person who betrayed Sir Christopher Seton, 'In hell condampnyt mot he be!' ought not to have been uttered by a Christian priest. His detestation of the treacherous and cruel King Edward induced him to lend a credulous ear to the report of his consulting an infernal spirit. The misfortunes which attended Bruce at almost every step of his early progress, he attributes to his sacrilegious act of slaying Comyn at the high altar. He supposes that the women and children who assisted in supplying the brave defenders of Berwick with arrows and stones, were protected from injury by a miraculous interposition. Such instances of superstition or uncharitable zeal are not to be viewed as marking the individual: gross superstition, with its usual concomitants, was the general spirit of the age; and the deviations from the ordinary track are to be traced in examples of liberal feeling or enlightened judgment."

The account of Barbour, which is written in a high spirit of appreciation, is supplemented by a notice of Andrew Winton, a brother ecclesiastic, and the author of the 'Orygynale Cronykil of Scotland.' To understand this chronicle properly, the reader must consult Dr. Irving; but we may remark that the chronicle or history was followed closely by Buchanan. Here is an extract, showing the plan which Winton prescribed to himself:—

The tytill of this tretis hale
I wyll be caulede Orygynale;
For that begynning sall mak clere
Be playne proces owre matere;
As of angelis, and of man
Fyrst to rys the kynde began;
And how, eftir thare creatioun,
Men grew in-tyl successioun,
Wyde sprede in-to thare greys,
Thare statys, and thare qualyteis,
Tyl the tyne at Nynus kyng
Ras, and tuk the gowernyng
Of Babylon and Assyry.
Fra hymne syne dystynctly
It is my purpos tyl afferme
This tretis in-tyl certane terme,
Haldand tyme be tyme the date
As cronyklers be-for me wrate,
Rejywynde the correctioun
Of grettere of perfectioun.
For few wrytys I redy fande;
That I outh drawe to my warande:
Part of the Bybyl, wyth that that Perys
Comestor ekyde in his yherys,
Orosius and Frere Martyne,
Wytht Ynglis and Scottis storys syne,
And othir incedencies sere,
Accordand lyk tyl owre matere.
To this, my wyt is walowide dry,
But floure or froyte; bot noucht-for-thi,

To furthyre fairly this purpos,
I seek the sawoure of that roe
That spanyys spreys and evyre spryngis
In plesans of the Kyng of Kyngis.

The story of Macbeth and the three weird sisters, as quaintly told by Winton, is the original of Buchanan's version.

Next in the catalogue of Scottish poets appears the name of the royal bard, King James the First, the second son of Robert the Third, by his queen Annabella. His principal literary performance is 'The King's Quhair,' written while he was in captivity in London. It is preserved in a single manuscript, which formerly belonged to Selden, and is now in the Bodleian Library at Oxford. Its subject is the lady who afterwards became James's queen, and whose praises are sung in strains of genuine poetry. Dr. Irving does not fail to point out the fact, that the author was a zealous imitator of Chaucer and Gower (both of whom, by the way, are mentioned in the poem by name); and, in the course of his remarks, he adduces the following coincidence:—

O very goste, that errest to and fro,
Why nylt thou flyen out of the wofullest
Body that euer might on grounde go?
O soule, lurking in this woful nyste,
Fly forthout myn herte, and it breste.

Chaucer's 'Troilus and Creseyde,' bokes iv.

O beay goste, ay flickering to and fro,
That neuer art in quiet nor in reste,
Till thou cum to that place that thou cam fro,
Quhich is thy first and verray proper rest.

'Poetical Remains of James the First.'

The 'Remains of James the First' have been popularized to some extent by the edition of William Lytley, published at Edinburgh in 1783; but up to the present hour no edition has been published which does not contain numerous errors.

We are surprised to find that Dr. Irving altogether omits James the Fifth, the famous "Gudeman of Ballangeich," from the list of Scottish poets. He agrees with Ramsay, Tytler, Pinkerton and Ellis, in ascribing the authorship of 'Pebilis to the Play' and 'Christis Kirk of the Grene' to James the Fifth.

We have not space to follow Dr. Irving in his enumeration of certain smaller poets, "many of whom are known only by name"; nor in his account of Robert Henryson, schoolmaster, of Dunfermline, who wrote a sequel to Chaucer's 'Troilus and Creseyde,' but whose principal work was a collection of thirteen fables. Passing these over, we come to William Dunbar, greatest of all the early Scottish poets, greatest by far of those who flourished during the reign of James the Fifth. Dr. Irving, in common with all previous biographers, has found the record of the poet's personal history and character extremely scanty. Dunbar appears to have been in youth a novice of the order of St. Francis, but there is some reason to believe that he studied at Oxford. He travelled greatly, and early in life imbibed the spirit of a reformer. The time and manner of his death are unknown; but he was dead in the year 1530, when Sir David Lindsay composed his 'Complaynt of the Papingo.' Space forbids our entering into the particulars of his life and poetry. On the whole, Dr. Irving's notice is fair and discreet; commenting modestly on the criticism of others rather than avowing any absolute criticism of his own. It is to be remarked, that Dunbar's tale of 'The Tua Maryit Wemen and the Wedo' contains the only specimen of alliterative blank verse which the Scottish language affords, and bears a great resemblance to the alliterative Anglo-Saxon and Icelandic poetry.

The translation of 'The Æneid,' by Gavin Douglas, the most learned of the early Scottish poets, is rather severely condemned for its affectations and modernizations of the original

text; but Dr. Irving does full justice to the same author's allegorical poems, 'The Palace of Honour' and 'King Hart.' The latter poem bears a striking resemblance to Phineas Fletcher's 'Purple Island.' The heart, the fountain of life, is personified, and goes through numerous adventures. The picture of King Heart in the pride of youth, surrounded by Valour, Strength, and other companions, is as good in its way as some portions of 'The Faerie Queen.' Some portions of Douglas's translation of Virgil appear to us full of rough vigour. It was the first metrical translation of a classic which had yet appeared in English, although Caxton had published a prose romance on the destruction of Troy. It appears to have suggested the translation of Surrey, to which it bears a very strong resemblance. It is remarkable that the catalogue of Scottish literature contains only two complete translations of Virgil, those of John Ogilby and the Earl of Lauderdale. The version of the latter was highly commended by Dryden, who adopted many of the lines.

We must dismiss in a single paragraph a number of poets and poems. 'The Freirs of Berwick,' a comic story, attributed by Pinkerton to Dunbar, contains genuine humour. It is the original of 'The Monk and the Miller's Wife' of Allan Ramsay. Another curious poem, which Dr. Irving reasonably ascribes to as early a period as 1548, is entitled, 'The Thrie Tailles of the Thrie Priests of Peblis.' John Bellenden, an ecclesiastic, known as the translator of Hector Boyce's 'History of Scotland,' wrote some good allegorical poems; and an anonymous contemporary translated Boyce's 'History' into rough verse, the manuscript of which, containing 70,000 lines, is preserved in the University of Cambridge. Bellenden, indeed, lived at a time when Scotland was rich in writers of verse. James Inglis, Abbot of Kinross, attended the Court of James the Fifth, and was known as a poetical student. His works have entirely perished. We think Dr. Irving errs in including in his History the name of Alexander Barclay, who was essentially an English poet, notwithstanding the fact that he is said by some to have been a native of Scotland. Indeed, the place of his birth has never been decided by direct evidence.

We next come to one of the most vigorous promoters of the Reformation,—to the elegant and gifted Sir David Lindsay, who was born at the very close of the fifteenth century. Lindsay, like Buchanan, loved to castigate the priesthood, and he did so with an ability which must have startled his enemies. His verses are very numerous. But the most remarkable of his productions is his 'Satyre of the Three Estaitis,' the earliest specimen that is now to be found of the Scottish drama, and which appears to have been acted before the King and his court at Linlithgow, in the year 1539. We learn from Charteris that it occupied nine hours in representation. It is a highly powerful, but very improbable, morality. While on this subject, it may be well to mention that Dr. Irving seems to have dealt very incompletely with the Scottish drama; but this is a defect, not of the historian, but of the history itself. The progress of the drama in Scotland has been both obscure and slow, and its early dawn there is involved in almost total darkness. Dr. Irving, however, makes the best of his theme, and succeeds in putting forth some intelligible data.

Passing over such names as Maitland, Arbuthnot and Temple, we come to the period of James the Sixth, whose court was a complete temple of the muses. The King himself; Buchanan, Keeper of the Privy Seal; Thir-

stane, who afterwards kept the seal, were all ardent votaries of the muses. Thomas Hudson, a follower of the Court, translated, at the King's request, Du Bartas's story on the poem of 'Judith.' Another court poet was William Fowler, who translated a portion of Petrarch. Again, we have John Napier, of Merchistoun, whose name is familiar to men of science, and who published some queer verses in his exposition of the Book of Revelation. King James the Sixth was not only an astute politician and a patron of literature, but also a very voluminous prose and verse writer. His poems are entitled to considerable respect for their excellent versification; but it seems to us that they lack that air of nationality which gives flavour to the writings of most of the early Scottish poets. We must not forget to mention in this place the name of Zachary Boyd, who wrote a multitude of miserable rhymes, but who was a highly pious and respectable old gentleman.

From the close of the reign of James the Sixth to the early part of the eighteenth century, the history of Scottish poetry is a barren subject; and Dr. Irving fails to make much way at this stage. The names of Sir William Alexander and Drummond of Hawthornden are well known to every reader. The last name on Dr. Irving's list is that of Lady Wardlaw, the real or imputed author of 'Hardyknute.'

We have dismissed the book before us as briefly as was possible; and we must, in conclusion, commend the industry which produced a work so useful. Dr. Irving's researches are exactly made, and their results are fairly stated. The best characteristic of this history is its modesty—a quality which we are not often permitted to attribute to our Scotch neighbours. Its one heinous fault is an imperfection arising from the author's total neglect of the Scotch ballads,—without an impartial estimate of which no history of Scottish poetry can be held complete. But after an impartial survey of its contents, we are enabled to commend it as a work which, though neither profound nor brilliant, will never mislead the inquiring student.

Reminiscences of a Veteran; being Personal and Military Adventures in Portugal, Spain, France, Malta, New South Wales, Norfolk Island, New Zealand, Andaman Islands and India. 3 vols. (Skeet.)

LIKE a good epigram, this work keeps its strong point for a conclusion. The author refrains from publishing his name on the title-page, but adorns the last leaf of the last volume with his *carte de visite*, beneath which appears, in capital letters, the laconic announcement, "Used Up." The portrait thus put before the reader is that of a short, thick-set gentleman, seated in an arm-chair, with a sideboard in the background, grasping with his right hand a cane, the length of which is altogether out of proportion with its owner's height, and holding in his left hand a hat. With a sullen and obstinate expression, which by no means lessens the unpleasant effect of a decidedly unattractive countenance, the used-up veteran scowls malignantly at society over a ragged white moustache and Newgate fringe, and looks as much like a bull-dog as a gentleman can look. Such is the aspect of "the Veteran," who is no less a person than Lieutenant-Colonel Bunbury, C.B., late Lieutenant-Colonel of the 80th regiment. The gallant officer, as his portrait shows, is not only a man with a grievance, but a man who, under every combination of circumstances, would make it his rule to have a grievance; a man, in fact, who without a grievance would be utterly powerless

to enjoy himself. Of course, his grievance is the old, old grievance of veterans who, with many qualities that command respect, are so unfortunate as to think more highly of their services to their country than any one else does. The gallant Colonel has been passed over, set aside, and trodden on by "great people." He is still only Lieutenant-Colonel and a C.B., whereas he ought to be Commander-in-Chief. "He has been favourably mentioned by the Secretary of State for the Colonies, also by the Commander-in-Chief in India, and on another occasion by the Duke of Wellington. None of the usual rewards of the service have been, however, bestowed in his case; and he therefore presumes they are only given for more important services." Thus the Veteran tells the world of his wrongs, in the Preface. In the body of the work, however, he no longer presumes that the rewards usually bestowed in his case are only bestowed in other cases, but, throwing away all respect for himself and others, prefers a charge of injustice against his great captain, the Duke of Wellington. The reputation of Wellington does not need to be defended against the detractions of disappointed subordinates. It is enough, therefore, to express regret at the indiscretion of one who places considerations of public honour below the pleasure of giving utterance to emotions of wounded vanity and personal resentment. Colonel Bunbury has done duty efficiently in his time as a regimental officer; but it is only through his own trumpet that the world ever heard he displayed qualities fitting him for a post of high command. He has, however, seen long service, commencing in the Peninsular War and closing in India, where under his command the 80th regiment distinguished itself at the battle of Sobraon, and was, of course, rewarded by "being spoken of in the public despatch in a commonplace way." Out of respect, therefore, to the duration rather than the brilliance of the Veteran's professional career, we wish studiously to avoid saying anything that can give him unnecessary pain; and would laugh at the petulant egotism which has prompted the publication of his garrulous Reminiscences, rather than direct attention to that unchivalric greed of private advancement, which has eventually brought him to regard the noble profession of arms as nothing better than a trade by which money and titles may be won. Apart from their unsoldierlike tone, the "Reminiscences" are so rambling, ungrammatical, incoherent and prosy, that they rouse no more forcible feeling than surprise that a soldier who has grown old in active service, in various parts of the world, should have so little to record that is worth the trouble of reading. Of course, a gentleman cherishing the comfortable belief that, from youth upwards, his fellow-men have been conspiring to obstruct his proper elevation, regards himself as one formed at his birth in heroic mould. Even in tender childhood the gallant Colonel was noted for his "pluck." He disdained to fight any boy who was not altogether his superior in age, height and strength; but whenever he was so fortunate as to find an antagonist older than himself, he rushed at him and punished him fearfully. At school a master struck him with a cane, on which the pedagogue forthwith lost his pupil, who "quitted his control." At sixteen years of age, he flung a wine-glass full of wine into the face of a lieutenant-colonel, who had presumed to call him "a foolish boy." In the Peninsula he seems to have taken upon himself, generally, to supervise all the military operations of the Forces, and to keep Marshal Beresford in order. Of course, all the most lovely women of

Spain and Portugal were dying to marry him. As in love, so also in field-sports, the Veteran was, in his day, foremost. He rode splendidly, was a first-rate shot, and was universally admired wherever he went. Returning to England, at the termination of his Peninsula soldiering, he amused himself in Berkshire for many months, squabbling with his step-mother, and accompanying his sister on the flute whilst she played upon the piano. "I used to have also," says the Veteran, "my little quarrels with my sister, and generally over the pianoforte, when I accompanied her on the flute. She had great execution; but sometimes I would accuse her of playing out of time, when she would accuse me of being in fault more than herself; the truth probably was, that we were equally wrong." As time went on, the Veteran had his little quarrels with nearly every one he encountered; but in his Reminiscences it is not his wont to share the blame with his adversaries in the above generous manner. Much other gossip we have about the Veteran's family affairs,—his step-mother, tailor, address, high courage and consummate knowledge of the world. The gallant soldier's time, however, is not all given up to trivial pursuits. He takes care to look after his interests,—a duty, by-the-by, which, according to his own confessions, he never seems to have neglected. On one occasion his efforts met with a ludicrous failure, which with characteristic simplicity he communicates to the public, evidently quite unconscious of the delicate humour of "the Duke's note," with mention of which the narrative of the hoax is concluded:—

"On the following day I waited on Sir Herbert, who received me very kindly, saying, that the Adjutant-General had been speaking to him about me; but unless I was prepared to purchase, he did not see how I could be assisted; promotion by Brevet was now impossible. I had not the means of purchasing, or I suppose they would have given me an unattached Majority, and afterwards have brought me on full pay; so on taking leave of him, I thanked him for having re-appointed me to a regiment without having called upon me to pay the difference (£111), considering my claims and that I was so junior an officer. His reply was remarkable: 'Captain B—, although to hold out hopes would be to deceive you, I must say that I do not know of any officer of your rank and standing in the army with claims superior to yours.' I reported to my friend the Adjutant-General the result of my interview, and he now recommended me to write to Lord Fitzroy Somerset, to whom the memorial I have spoken of was addressed; his lordship was then Surveyor-General of the Ordnance, and in addressing my letter to him at the Ordnance office, I was not aware that he had left town that morning on a particular mission to Madrid, but I received an answer in the following words:—

"The Duke of Wellington presents his compliments to Captain B— and in reference to his letter to Lord Fitzroy Somerset, of the 8th instant, begs to inform him that it is quite impossible for the Duke even to take into consideration his claims to promotion by Brevet, till he shall have received the permission of the Commander-in-Chief so to do."

"January 12, 1823."

—To receive an epistle from the Duke was an honour I did not expect, and I confess I rather surprised me. I took the letter to the agents. Mr. C— at once told me that the letter was not in his Grace's handwriting, and moreover to his certain knowledge the Duke was then on a visit to the Duke of Athol, in the Highlands. I went in a towering rage to the Ordnance office, and showing the envelope enclosing the note which had thus been addressed to me, demanded of some of the clerks whether they knew the handwriting, and they told me it was that of Mr. P—. On seeing the note in my hand, he at once guessed the object of my visit. He told me my letter ought to have been sent to Lord Fitzroy's private residence if I

had meant it for his perusal solely, but seeing it addressed at the Ordnance office, he naturally conceived that it was on the business of the department, and therefore opened it. 'But on what authority did you answer it?' I exclaimed, 'and in the name of the Duke of Wellington, who to my knowledge is not in town.'—'Because I am aware that it would have been his answer had I forwarded your letter to him, for should his Grace once enter into the claims of the officers who served in the Peninsular war, he would be inundated with similar applications. If however you are not satisfied, I pledge you my word of honour your letter shall be forwarded should you again address his Grace; but you will find his answer just as I have by anticipation written it.' I declined, and this incident deterred me for twenty-five years from renewing my application. At the expiration of that period I did so, at the same time sending the Duke this identical note, to explain why I had delayed 'urging my claims for so long a period. His Grace was then Commander-in-Chief. On returning to me the note he did not say it was not his writing, but put on the envelope, 'You had better keep this for some future occasion.'"

The occasion on which the Duke gave the Veteran this delicate hint was, doubtless, subsequent to the following correspondence, in which Colonel Bunbury, with his customary self-complacency, thinks the victory rests with himself:—

"Previous to this correspondence taking place, a discussion occurred in the House of Lords on the subject of army flogging, in which the Duke took a very prominent part, cautioning their Lordships against curtailing the powers of officers in command of troops, and painting in glowing colours certain circumstances which had recently come to his knowledge in a case of shipwreck, where but for the energy displayed by the officers in exercising the powers vested in them, the most fearful anarchy would have prevailed. The Duke of Grafton inquired whether these officers had been rewarded or promoted for the services they had performed? The Duke of Wellington, as reported in the *Times* newspaper, is understood to have replied that they had! This piece of humbug was too much for me, so I at once sat down and wrote the following letter:—

"Jermyn Street, 13th August, 1846.

"My Lord Duke,—My attention having been directed to the debate in the House of Lords, reported in the *Times* newspaper of yesterday, where in reply to a question from the Duke of Grafton, "whether the officers alluded to in the instances of shipwreck, where their conduct had been such as to end in the saving of every individual, had been rewarded or promoted," your Grace is stated to have signified that they had, I beg leave most respectfully to point out an error which I have no doubt has been unintentional. I was Lieutenant-Colonel and commanded on the occasion of the wreck of the *Briton* and *Runnymede*, in November, 1844, with nearly six hundred men, women and children on board, in a desolate island; under most appalling circumstances, a state of discipline was maintained during the fifty-one days of their detention, and until their deliverance was effected, which called forth the admiration of your Grace and his Excellency the Commander-in-Chief in India; but I have not since been promoted, nor have I received any reward, as I beg to submit to the consideration of your Grace. That this was one of the wrecks alluded to, I am assured from the subject of debate, "Flogging in the army;" an expedient unavoidably resorted to on the Andaman Island when instances of drunkenness and insubordination had appeared, but which were promptly put a stop to by the infliction of corporal punishment on the four delinquents, and the certainty they all had when Martial Law was proclaimed, that discipline would be enforced with the strictest vigour. By that discipline which was so commended by your Grace, was I enabled to save so many from starvation, and lead these same men subsequently in the Punjab, where I always found them amongst the foremost in the performance of their duty, good soldiers, and where they

gained for me the recommendation of your Grace submitted to the Queen for my appointment with the other Lieutenant-Colonels in command of corps in Her Majesty's service to be a Companion of the most honourable Military Order of the Bath. Your Grace's letter confirming the sentiments of General Sir Hugh Gough on my conduct, during my charge on the Andaman Island, cannot be otherwise than highly appreciated and gratifying, coming from such a quarter. It has been my good fortune, my Lord, on other occasions to have been twice honourably mentioned in General Orders, three times in despatches, to have been twice thanked by successive Secretaries of State for the Colonies, but never, my Lord, to have received reward or promotion, but in the ordinary routine of a service of years thirty-nine, principally on the staff or in responsible commands, with the exception of my appointment to be a Companion of the Bath above alluded to in April last. I have the honour to be, your Grace's most obedient humble servant, THOMAS BUNBURY, Lieut.-Col. 80th Regiment."

—Some friends whom I consulted, advised me not to send this letter, as the Duke might possibly order me out immediately to join my regiment in India; but I had already made up my mind to go out there, and I cared little for the order. It was sent, and in less than an hour afterwards I received the following reply:—

"London, 13th August, 1846.

"F.M. his Grace the Duke of Wellington presents his compliments to Lieut.-Col. Bunbury. He has just now received the Lieutenant-Colonel's letter of this day's date. It is impossible for the Duke, and he declines to discuss with any gentleman what is reported to have passed in debate in the House of Parliament of which he is a member. If Lieut.-Col. Bunbury thinks that he has reason to complain that due notice has not been taken of his services, he should adopt the course usually taken by officers of the army, when any circumstance has occurred about which they desire to make a representation to the Commander-in-Chief. He should clearly specify the case in a regular military memorial, which would be fully considered. Lieut.-Col. Bunbury, &c. &c."

The soldier, capable of publishing this reproof from his Commander-in-Chief, is clearly so cased and bolstered up with self-importance that ridicule cannot reach him.

We should add, that, in addition to the errors of taste and temper already mentioned, Colonel Bunbury introduces the names and affairs of private persons into his Reminiscences, in a manner altogether at variance with the laws by which gentlemen regulate their conduct.

Queensland the Field for British Labour and Enterprise, and the Source of England's Cotton Supply. With Map. By George Wight. Two Years and a Half resident in that Colony. (Street.)

THE excellence of the cotton grown in Queensland has, of late years, turned the attention of British manufacturers to that region of our Australian dependencies, as a field peculiarly adapted to the cultivation of the plant on which the prosperity of the mother-country so greatly depends, that it is incumbent on us to reduce to a minimum the chances of a deficient supply. In 1854, a leading Liverpool house declared the Queensland cotton to be equal to the highest class of Sea Island fibre; and since that time, Mr. Clegg, of Manchester, Mr. Haywood, Secretary to the Manchester "Cotton Supply Association," Mr. Bazley, and other competent judges, have borne emphatic testimony to the fineness and strength of Australian Cotton. "About five years ago a few bags of Moreton Bay (Queensland) cotton," said the last-named gentleman, two years since, addressing a Manchester audience, "were shipped to Liverpool, and I saw at once that, with such vastly superior cotton, yarn would be produced

finer than any that could be manufactured in India or Great Britain. I bought that cotton, carried it to Manchester, and spun it into exquisitely fine yarn. I found that the weavers of Lancashire could not produce a fabric from it, it was so exceedingly delicate; the weavers of Scotland could not weave it; nor could the manufacturers of France weave this yarn into fine muslin. It occurred to me to send it to Calcutta, and in due time I had the happiness of receiving from India some of the finest muslin ever manufactured, the produce of the skill of the Hindoos with this delicate Australian cotton. At the Paris Exhibition, some of this muslin was placed in the same glass case with a large golden nugget from Australia, and the two attracted much attention. The soil and climate of Queensland are capable of producing, with proper care, 600lb. yearly per acre of this exquisitely fine cotton. Two crops could be grown each year. I value this cotton at 1s. 3d. per lb., which would be equal to 40l. per acre. This is no over-estimate, for I have recently given 1s. 8d. per lb. for Australian cotton. Now, 40l. per acre is an enormous yield for any agricultural product; and I do not think such a profitable return could be obtained in any other country. Judging by what is done in the United States, a man with his family in Queensland could cultivate ten acres of land, which would yield 400l. per annum—a very high rate of profit." To turn Australian land to such good account labour is a first requisite; and in his chapters entitled 'White Labour or Black Labour, or Both?' and 'Our Cotton Farms,' Mr. Wight points out how, in his opinion, such labour would be best supplied. He urges the married men, of our small-farmer and peasant classes, who have wives and children, to emigrate and become peasant cotton-growers. A year's labour in Australia of a shepherd and his wife will, with care, enable them to defray the expenses of emigration; another year's labour will put them in possession of ample funds wherewith to enter on the cultivation of the fibre. "The labour of the small proprietors is more productive than hired labour, either black or white." But these small proprietors, to be successful, require the assistance of wives and children—the most willing and effective labourers that such farmers can command. The assertion that the extreme heat of Queensland forbids a general application of white labour to the soil, is met by Mr. Wight with ridicule and flat denial. The men who are reported as having died from the effects of the climate have, in most cases, merely fallen victims to strong drink. Persons of temperate habits enjoy excellent health in every part of the colony. "There are," says Mr. Wight, "every day in the year, 20,000 white men in Queensland more or less exposed to the sun, and yet the mortality is lower than in England." Mr. Wight would like to see a company formed for the purpose of sending out married labourers to Queensland, and cultivating cotton by their agency. Perhaps, of all his entertaining and useful treatise, the portion in which he propounds this scheme is the least practical. There would be grounds to mistrust a system of emigration carried out under the auspices of a joint-stock company. Of the prevailing and destructive intemperance of one class of Australian labourers Mr. Wight gives startling and pathetic evidence. The "gentleman" emigrant, the man who, before "going out to Australia," moved in the more refined circles of the mother-country, and has since sunk to the condition of a colonial servant, is too often a ferocious drunkard. He is an excellent subordinate as long as he can be kept from the dram-bottle. "Few will surpass him in working a dog with

sheep, or tracking, on the fleetest charger on the station, a mob of cattle or horses." But as soon as he receives the results of twelve months' honest labour, in the shape of a cheque for 40l. or 45l., he quits the station on which that sum has been earned, and does not return till he is once more penniless. Not unfrequently his expedition in search of enjoyment terminates at the nearest public-house, where, at the close of three or four days spent in copious potations of Australian brandy, and in "shouting," i. e. entertaining, all comers, he finds himself stript of his worldly possessions, and endowed in exchange with an attack of *delirium tremens*. It is only occasionally that Mr. Wight indulges in such descriptive digressions. His main object is, to offer the public, in a cheap and condensed form, such results of his personal observations as may be of use to British farmers and workmen bent upon emigrating to Queensland; and though he has by no means exhausted an important subject, he gives many particulars and hints, and much sound counsel, for which, we doubt not, many an Australian emigrant will cordially thank him.

Narrative of the War in China in 1860. To which is added, the Account of a Short Residence with the Tai-ping Rebels at Nankin, and a Voyage from thence to Hankow. By Lieut.-Col. G. J. Wolsley. (Longman & Co.)

Narrative of the North China Campaign of 1860; containing Personal Experiences of Chinese Character, and of the Moral and Social Condition of the Country; together with a Description of the Interior of Peking. By Robert Swinhoe. With Illustrations. (Smith, Elder & Co.)

ALTHOUGH the Cæsars of the Chinese War are dignifiedly silent, it is not so with their Lieutenants. These are beginning to exhibit their powers both in narrative and commentary, and there is no fear that the deeds of the heroes in the Flowery Land or the memories of the heroes themselves will be allowed to die out. To-day we have a brace of samples very much to the purpose. The one by a "soldier," the other by a "civilian." In their respective ways, both gentlemen have executed their tasks with credit and ability, and may reasonably look to much honour and some profit, as the result of their labours. Lieut.-Col. Wolsley narrates the story of the war in a pleasant, frank manner, with a graceful dignity, and without any shadow of affectation. Mr. Swinhoe is of a more gossiping character, as became a man who had to look to many small details; but he, too, recounts his story with skill and clearness, and conveys much information without wearying, and just enough amusement to excite, without fatiguing, the reader. The Lieutenant-Colonel leads us into the fight, and writes commentaries on it afterwards; the Civilian looks on, and we gaze with him, and listen to the canards reported by the audacious wits, and see as much of the people and their houses as with the Lieutenant-Colonel we witness of the armies and their camps. Both authors, as was indeed to be expected from English writers on such a subject, render ample justice to the fighting and other qualities of their adversaries. Occasionally, if we find details in each book which seem almost a *replica* of the other, this is only a testimony to the truth and often to the acuteness of observation and correctness of description of each author.

In mere ability of composition the Lieutenant-Colonel is a trifle a-head of his colleague, and the former is decidedly superior when, after narrating a series of events, he proceeds to make reflections upon them and on subjects

connected with them. This is especially visible on comparing the two accounts of the plunder of the Imperial Palace by the French. The latter do not look quite such ferocious plunderers in the soldier's as in the civilian's volume; and, moreover, the former gives his reasons for the conclusions at which he arrives on that plundering in particular, as well as on the system of looting in general.

As, however, the Lieutenant-Colonel, aware that the main incidents of the war are well remembered by us all, has not written his book so much with a view to reproduce the old scenes as to describe new ones in reference to his visit to the Tai-Pings, we turn to this portion of his work for samples of its quality. Of the alleged religious sincerity of those formidable and too-highly-professing rebels, he has but a very contemptible opinion. Traces of Christianity or of Christian spirit among them he sees none, and he treats the idea which discerns in an alliance with the Imperialists an antagonism against the Christian religion favoured by the Tai-Pings,—as a very shadowy and altogether untenable idea indeed.

The Heavenly King, Tien Wan, who is at the head of the new movement, seems to be a bad imitation of the Mormonite prophet, Joe Smith. He springs from the lowest classes, has picked up some elementary religious teaching from an American Baptist missionary, has taken some portions of Holy Writ to suit his own purpose, and, after making himself equal with the highest in Heaven and above the Son, he coolly asks the missionary in question to adopt this system and aid him in extending it. He has inferior Kings, like the Mormon "Angels," and the views of these heavenly rulers with respect to the ladies, not one of whom they covet, unless a message to that effect reaches them from the Almighty, might be adopted without reserve by Brigham Young himself. The Right of the sect is in their Might. They destroy, but do not repair; consume, but do not produce; the Kings rule not over subjects, but slaves; they have all but abolished the use of money, and nearly every offence is visited with the same penalty,—Death!

"The power of punishing with death is given to almost the meanest officials. Men whose rank corresponds with that of a constable with us, possess and use it most freely. The man who on the day of our landing was sent with us from the custom-house to show the road into the city had this power. All who have it carry a little three-cornered flag, with the character 'Ling' in its centre. Such is their 'attribute of awe and majesty.' This guide was a very common-looking fellow indeed; dressed little better than a coolie, and holding such an inferior position, that the gatekeeper of the city refused to let us enter at his request. Mr. Roberts told us that when he was leaving Soochow *en route* for Nankin, a petty officer of this sort was sent with him to obtain chairmen for him at the different stages; and that upon one occasion some poor person having annoyed him (the official) he said he would behead him, and was only prevented by Mr. Roberts from actually carrying his threat into execution. Mr. Roberts also informed us, that he passed on the road, during his journey, numbers of human bodies from which the heads had been but lately severed. The men who were sent by the Taan-wan to attend upon us during our stay, said they had been in former times silk-weavers at Soochow, but were then slaves, having been captured at the taking of that city. Their lives were spared, because they could be made useful in carrying away the loot from thence. These poor wretches were: n the most abject misery, but did not dare to express their feelings when any other Chinamen were present. They were really grateful when we gave them a cheroot to smoke, the use of tobacco being

nominally prohibited, but like opium still much indulged in by those who can obtain it. Although smoking is said to be punishable by death, all the officials who visited us were delighted to get cigars; indeed at last they became rather importunate in their applications for the fragrant weed. Wherever we went the same question was universally asked us, 'What have you got for sale?' 'Have you any opium?' 'Have you any firearms?' A man went on board one of our ships lying off Nankin, and asked for a hundred chests of opium. Some of our party had once to pay the Tien-wan a visit late in the evening, when that royal personage was quite stupid, and most unmistakably under the influence of the above narcotic. To say that the Tien-wanists deserve any praise for their proclaimed laws prohibiting the use of opium is absurd; and although it may serve as a good missionary cry, to create sympathy for the cause in England, it will be laughed at by every man who has lately paid the Yang-tse-kiang a visit at any point where the rebel territories touch upon it. We visited many such places, and at all, as at Nankin, the great cry was for opium and arms. We made frequent attempts to worm out the peculiarities of their form of government and to discover the nature of their laws, but without success. Various kings look after various departments, and they have established 'public boards,' in imitation of the Imperial system, under the royal presidency of these kings; but all real authority is centered in Tien-wan, without whose sanction nothing that they deem important is ever carried out. His mother and two of his brothers live with him, but exercise no authority, and have not any influence over him. Neither of these brothers have hitherto appeared in the field; but during our residence at Nankin one of them was about to lead out an 'army' for the first time, Tien-wan having heard that people were talking disrespectfully regarding his relations, and comparing them to the drones who eat the honey but made none themselves. All the kings now speak most confidently regarding the future: the capture of Soochow, by means of the traitorous conduct of the Imperial garrison, having inspired them with fresh confidence. Before this success their cause was much less hopeful, and they were badly off for supplies and money. They told us that it was their intention to drive away the 'Imps,' as they term the Imperialists, from the entire basin of the Yang-tse-Kiang during the summer of this year; and for that reason they were most anxious to know how we intended acting at the open parts upon the river where we have now hoisted our flag. When at war with the existing Manchoo government last year, we prevented the rebels from seizing Shanghai, and actually came to blows with them in our defence of that place. So, as we defended the Imperial city because our flag was hoisted there, when we were at war with Hien-fung, they naturally conclude we will do so all the more energetically now that we have concluded a peace, and are on friendly terms with his government. On this account they regard our newly-opened trade on the Yang-tse with as much concealed dislike as the Imperialists hail it with pleasure; the latter thinking (for the reasons mentioned above as influencing the Tien-wanists), that our presence at Hankow, Kew-kiang, and Ching-kiang, will procure for those important places a security which they themselves alone have not the power of affording them."

We now address ourselves to the second author, Mr. Swinhoe, who enjoyed an advantage which was not common to the gallant actors and interested spectators of the incidents of the brief but rattling drama. Attached to Her Majesty's Consular service in China, and serving as Staff Interpreter to Sir Hope Grant during the campaign, he was qualified to describe not only what he saw, but also what he heard;—and he has accomplished the double task in a rough-and-ready, good-humoured, half-mocking, half-sentimental, and altogether amusing and satisfactory manner.

In accompanying the Expedition to which

was intrusted the mission of punishing the Chinese for their treachery (natural, and not dishonest, in a Chinese point of view) of the preceding year, and to secure, after punishment, all the advantages that were possible, he certainly kept a bright look-out, and pleasantly chronicles his experience. One of the first incidents he met with after the first advance of the Expedition must have raised his ideas of the dignity of the Chinese literary man. He saw, on his way, a mourning party in white bewailing a defunct person who "was a literary character, and as such he was dressed, with a Mandarin hat on his head. A cart and horses made of paper were being burnt to convey his manes to their long home, while crackers fizzed and banged in the air to drive away the baleful influence of the departed spirit." In this picture, observe the position of the hat. It rests on the head of the defunct literary gentleman, and is not, as in "barbarian" countries, "carried round."

In this Expedition, the coolies formed an important item, and did their work capitally, when they were allowed to have their dearly-beloved opium, which was unwisely prohibited till discovery was made that without the little stimulant they would have pined away. The leading commissaries, too, learned that it was cheaper in the end to give high prices for provisions, on the spot, than low prices for the same procured at a distance,—the charges of transport being greater than the tariff in a dear market. Indeed, there were many things to be learnt, sooner or later. Mr. Swinhoe, belonging to the Staff, was a mounted officer, for whom the regulations making him so allowed no horse! If he was puzzled at this, not less so, on another occasion, were the hungry English soldiers, who were flogged for securing poultry or pigs, while the French took both with impunity, ate with appetite, and were exempt from both remorse and indigestion. The very provost-sergeants who seized and flogged the offenders, Mr. Swinhoe "was confidently assured, were greater plunderers themselves than most others."

At the affair at Takoo, the Armstrongs came for the first time into play on a stricken field. At long range they did admirable, or terrible, service; but a battery of them being ordered up, to silence some troublesome Chinese guns,—"the range being only 250 yards, our firing was somewhat ineffective, so three of Desborough's 24-pounders were detached to take the place of the Armstrongs, and they soon effectually put a stop to the annoyance." This will explain why our new ship in armour, the Warrior, is chiefly furnished with rifled 60's:—any young gentleman on board the Excellent or Britannia is competent to tell you that Armstrongs are not in favour, because at close quarters the shot will go really clean through an enemy's ship and do no further damage, except to what and whom it may happen to meet in its way.

Mr. Swinhoe stoutly maintains that the English soldiers rushed first into their side of the fortifications, while the French were yet bombarding the place. This being the case, General Montauban promoted the first Frenchman who got inside, not because he was the first of the French division, but leading man of both armies! Such is the generosity and honesty of modern chivalry. However, the Allies respected the Tartar artillerymen who had stuck so long to their pieces. Their respect, nevertheless, was a little modified, when, on entering the fort, they found the semi-heroic cannoneers tied by the legs to their guns!

On the Tartar side there was some modification of feeling, too, after victory had sat upon

our helmets,—then, the "barbarian devils" of yesterday were hailed unanimously by men of note and low traders, not as simple "gentlemen," but as "Great Kings." Fancy a very quiet man, who hardly could claim to call himself Esquire, being addressed as "Great King!" and congratulated that his "honoured countrymen had given the Tartars a thrashing"! The complacent degradation of the speaker could only be matched in the cases of the agile individuals who led the run from Manasses, and made loud and cheerful note of the perfectness with which they had been whipped. As we have been speaking of experiences, let us mark one which may be found of use at home:—

"The water is too muddy to drink when first drawn, but is speedily rectified by the application of a little alum, which soon deposits the mud at the bottom, and leaves the fluid above clear and colourless. The Chinese here were well acquainted with this peculiar property of alum, and a lump of this mineral was to be found in most houses. Mr. Abbot, chaplain to the Marines, who was attached *pro tem.* to the Second Division, used generally to supply himself with a pocketful of alum when going the rounds of the camp, and frequently won the hearts of the simple soldiery by purifying the filthy liquid they were drinking by the use of this juggle, as they termed it, the chemical properties of which were to them quite mysterious and inexplicable."

The following details as to what passed in the Emperor's palace after its capture by the Allies will probably afford as much amusement to a French as to an English reader:—

"The greater part of the curiosities lay about these rooms, and we proceeded to examine them as we would the curiosities of a museum, when, to our astonishment, the French officers commenced to *arracher* everything they took a fancy to. Gold watches and small valuables were whipped up by these gentlemen with amazing velocity, and as speedily disappeared into their capacious pockets. After allowing his people to load themselves as fast as they could for about ten minutes, the General insisted upon them all following him out, and kept on repeating that looting was strictly prohibited, and he would not allow it, although his officers were doing it without any reserve before his own eyes. He then told the Brigadier that nothing should be touched until Sir Hope Grant arrived. Just as we were walking out of the chief gateway an officer accosted the General, and informed him that they had caught a Chinese stealing a pair of old shoes out of the imperial grounds. 'Bring him here!' said the indignant General. 'Have we not said that looting is strictly forbidden?' The prisoner came forward trembling, and the gallant General exhausted his wrath with his cane about the shoulders of this luckless scapegoat. The Brigadier then went to breakfast with General Montauban and Staff, and I sought my friends of the *Bureau Topographique*. The French camp was revelling in silks and bijouterie. Everybody had some rare curios to show me, asking me their worth, as, being an interpreter, and having the eunuch with me, they looked upon me as quite a connoisseur. One French officer had a string of splendid pearls, each pearl being of the size of a marble (this he afterwards foolishly disposed of at Hong Kong for 3,000*l.*); others had pencil-cases set with diamonds; others watches and vases set with pearls. Indeed, it would be an endless task to enumerate all the valuables already appropriated from the Palace, and yet the French General had asserted that nothing had been taken, as looting was strictly prohibited. After breakfast the correspondent of the *Moniteur* got me a pass to accompany him into the Palace again, and we had not been long in before Sir Hope Grant and Staff arrived. General Montauban welcomed him, and positively assured him that nothing had as yet been taken from the Palace; but as Sir Hope Grant walked through the French camp his own eyes plainly told him the falsehood of such a statement. Looting still continued, but more surreptitiously; and a French officer, alluding to General Montau-

ban's prohibition, said, 'It places us quite in a false position. The General says you must not loot, and yet he allows it to take place before his own eyes.' Lord Elgin next arrived, and strongly protested against the looting, saying, in plain terms, 'I would like a great many things that the Palace contains, but I am not a thief.'

Subsequently, general looting was permitted, but the booty acquired by the English officers and men was massed together and divided among all actively engaged, on the spot or elsewhere, on the day of the capture of the palace. At a later period still, after the news of the murder of several of the English and French prisoners who had been seized and carried away by an act of the greatest treachery, Lord Elgin resolved to destroy the Palace, the opening scene of the treason and the cruel murders. The French, however, do not seem to have cared so much for their dead comrades as the English and the Sikhs for *their* assassinated brethren:—

"The First Division, under General Michel, was detailed for this work of destruction, and betimes on the 18th started for the Palace, where the buildings were apportioned to the different companies to destroy. The French refused to co-operate, as they condemned the measure as a piece of barbarism, forgetting that the chief mischief had been committed by themselves, not only in purloining and demolishing everything that the Palace contained in the way of Art, but also in having permitted their men to incendiarize the choicest rooms of the Emperor."

The avenging work was well done, and the Chinese themselves respected the doers all the more for their deed. They not only welcomed the English with apparent cordiality, when the latter visited the city after the treaty of peace had been concluded, but regretted "our Majesties" were so soon about to leave; they had hoped that now we were masters of the city, we should hold possession of it";—but then the polite individuals who said this were shopkeepers, and the personages to whom the civility was paid were "our Majesties" the English, who were being cheated with alacrity.

Religion seems to sit easily on the "bosom's throne" of the indifferent Celestials:—

"The mass of loyal subjects of the empire who feel in duty bound to acknowledge one of the three established religions in China—to wit, Confucianism, Taoism, and Buddhism—may all get suited in the numerous temples dedicated to each of these within and without the metropolitan walls; but, as far as my experience leads me to infer, a very confused idea is entertained by the material Chinese masses of the relative differences of the three. The majority pay like homage to all. You will often see a literary character who feels bound to be a staunch upholder of Confucian doctrines, burn incense and bow before the dull images of wood and stone worshipped by Buddhists; and again, a farmer or sailor who daily and nightly chants prayers to the presiding deity of his class bodied in hideous material form and bedaubed with gaudy hues, will turn with reverence to a Confucian tablet, thinking it must bear a sacred character, because wiser and more lettered heads than his pay to it homage."

This description is confirmed by the conduct of the Chinese when they visit foreign countries. At the once-famed Chinese Exhibition in this capital there was a demure, crafty-looking Chinese who spoke very intelligible pigeon-English, and whose unbecoming behaviour in presence of various figures of the gods of his native land was at once painful and amusing to witness. They were of no good here, he intimated; they could not hurt him; and by the time he should again bow before them at home, they would have forgotten all about it. Meanwhile, this shrewd knave had become a Christian, very much to his pocket's gain, and to the

loss of that of well-meaning persons of small discretion. He had been converted, he said, at "Boston, in America," and, though he resumed his old faith on board ship, yet he had found the profession of Christianity pay so well in the States, that he renewed it in England, and attended at Westminster Abbey,—to listen to the organ. He was a candid fellow in spite of all this, at least as the time approached for his departure, when, if asked whether he would keep to his profession in the Flowery Land, he would smile, with an air of pity for the querist, and ask, in his broken English, if it would be wise to profess unless he saw probable profit with it. We believe his vocation as a Christian here was not so paying a calling as in the United States, for this easy fellow used to close his stories with an assertion of which he had good reason to be convinced, that "Christianity mighty dollar-making trade at Bosson-in-America!"

From first to last, the Chinese authorities behaved with treachery. While raising their thumbs to invoke heaven to bear witness to the uprightness of their intentions, they were plotting and designing to make seizure of Lord Elgin, and therewith compel a peace on their own terms. Of this no secret was made, and the ultimate defeat of the Allies was counted upon at Canton, and the reliance backed by heavy betting:—

"So sure were the Southern Chinese that we would be defeated in the North, that the Cotton Guild at Canton offered to bet 50,000 dollars against the capture of the forts, and this money they agreed to lodge in the Oriental Bank at Hong Kong on the risk; but, strange enough, the British merchants lacked confidence in our authorities to take up the wager. A few American merchants only came forward to back the side of the Allies, but then refused to stake more than 10,000 dollars, which the Guild declined, saying that they would only bet at the figure they had first stated. The Cantonese took a great interest in the northern struggle, both politically and with a mercantile view, and one large firm in particular was always well advised on the progress of the allied arms. The chief of this firm had a brother at a town near Tien-tsin, who communicated to him the events that transpired in his neighbourhood. The news was always in possession of this firm within twelve days of any occurrence in the north, the letters containing it being carried by relays of couriers over some 1,300 miles' extent of country in this wondrously short space of time. Thus many of the Chinese were advised of the various actions long before intelligence reached Hong Kong by steam. Mr. Pedder, interpreter at the British Consulate, Canton, ingratiated himself into favour with this particular firm, and was regularly supplied by them with the earliest intelligence, which he was thus enabled to forward to the Foreign Office and to Mr. Bruce, through the Consul at Canton, long before it could reach them from any other source. Many people at first smiled at the possibility of the news arriving at Canton with this almost electric speed, but in nearly every instance the facts conveyed by this means were confirmed by the subsequent arrival of the steamer from Shanghai."

Whether the object for which the war was commenced has really been gained, seems yet to be problematical. Some advantage, of course, has been realized. We have made an impression of fear, exacted a tribute, widened our limits, established a legation, and opened up new pathways for commerce. If the Chinese government feel convinced that they, in the end, will be the gainers, the good that has been accomplished will endure and increase; if they are unable to discern a prospect of profit to themselves, the treaty will be evaded. As for breaking any of its terms, "It's a long cry to Lochaber," and, besides, the Russians are daily

assuming more and more an air of being their protectors, as well as their despoilers.

The Papacy and the States of the Church—
[*Kirche und Kirchen, Papstthum und Kirchenstaat*, von Johann Joseph Ignatius von Döllinger]. (Munich.)

THIS volume is the most important contribution to the Roman Question, and will long remain the greatest authority upon it. No champion has hitherto appeared who could give the same impartial consideration to the two sides of the case; no one who could pretend to unite perfect knowledge of the history of the Papacy with regard for political considerations and the art of government; no one who had studied history with the same respect for its teaching and theology, with the same practical application to the needs of life. Dr. Döllinger has had to contend at once against friends and foes; to fight in the ranks of his enemies, without being identified with them; to deal the most crushing blows at his friends, without ceasing to be enrolled under their standard. Like Bentley, he has taken time to compose an answer; he has "run no risks, left no crevice unguarded, wanted in no paradoxes; above all, he has returned no railing for the railing of his enemies"; and the result is, that, like Bentley's, his answer has for ever settled the question, and placed the temporal power beyond appeal.

We shall not attempt to follow Dr. Döllinger through the whole compass of this volume, or to do more than allude briefly to the chief division. To theologians, the masterly review of all the existing churches and sects, as they bear upon the spiritual power, must be of immeasurable value; but in this field we are non-combatants. To us, the most important part is that relating to the temporal power; and if we admit the spiritual question, it must be merely to enable Dr. Döllinger to clear up the misrepresentations that grew out of his lectures. In his Preface he complains feelingly of the attacks to which misapprehensions have subjected him; and though, on comparing our report of his lectures with the text in this volume, we cannot discover any actual discrepancies, we are ready to allow that an unfair impression may have been conveyed. A compressed report of arguments in themselves compressed must necessarily present only the dry bones of the reasoning without transitions and without qualifications. Naturally, too, the most striking statements would be selected without the context, put more forcibly than the lecturer put them, as his conclusions instead of links in his argument. "The reports in the papers," he says, "written from recollection, gave an incorrect picture of a discourse, which did not attempt to cut the knot in the usual manner, but spoke of 'if' and 'but,' and hinted at various critical periods which could hardly be counted on, an uncertain future, and various possibilities. This was unavoidable; any reproduction, save a verbal one, must cause distorted notions, however little the reporter desired it. I, therefore, offered one of the most widely circulated papers, after it had reported my first lecture without any wilful misrepresentation, but with omissions which altered the sense and reach of my words, a copy of my manuscript, but they refused it."

So far we fully agree with Dr. Döllinger. We have only to go back to the time when similar reports existed in the House of Commons, for parallel cases. Even with the admirable mode of reporting that exists in the present time, we hear of occasional errors. But there are graver matters contained in the Preface from which we have just quoted—charges of

wantonness preferred against Dr. Döllinger for showing the Church's wounds, accusations brought by his brethren in the faith, and indorsed by periodicals of note in England. He has been asked why he spoke on the subject, if he could not praise the Papacy; why he did not follow the example of Montalembert, and give up everything he most valued, liberty and truth, before the temporal power? One of his censors, with a sublime unconsciousness, taxes him with his adherence to facts, and says: "We almost believe we are listening to a modern Dr. Dryasdust rather than to a great Church historian and Catholic theologian." Dr. Döllinger replies to these charges that he only follows the example of greater names in the Church, and assigns the following reasons to justify his lectures:—

I seemed to recognize in April what is only more evident in October, that the opponents of the temporal power are resolved, united, superior in force, and that there is nowhere a defensive power which has at once the wish and the strength to ward off the catastrophe. I thought it probable that there would soon be an intermission of the temporal power—an intermission which, like previous ones, would soon be at an end, and would lead to a restoration. I, therefore, resolved to make use of the opportunity afforded me by the lectures, to prepare the public for the coming events that were even then casting their shadows before them, and thus to prevent the scandals, the doubts, and the shocks which would unavoidably ensue if the States of the Church fell into other hands, although the pastoral letters of the bishops had just then energetically asserted that they belonged to the Church's integrity. I wished, therefore, to say, the Church can exist by itself and for itself; and it did exist seven centuries without the temporal possessions of the Popes: later, however, this possession was necessitated by the state of the world, and has, notwithstanding great changes and dilemmas, mostly answered its appointed end, namely, to serve as the basis of independence and freedom for the Popes. So long as the present state and formation of Europe exists, we can discover no other means to ensure the liberty of the Papal Chair, and therewith the general confidence. But the insight and might of God reach further than ours; and we may not presume to set limits to the Almighty's wisdom, and say to it, Thus, and no other way! If, however, the threatening event takes place, and the Pope is deprived of his temporal dominion, one of these three eventualities will be realized: either the loss of the States of the Church will be merely temporary, and the country will, after some intermediate events, return either altogether, or in part, to its legitimate sovereign; or Providence, by ways unknown to us and by combinations which we cannot divine, is placing the Papal Chair in a situation by which its object, that is, its self-dependence and unimpeded motion, may be attained without the means hitherto employed; or, lastly, Europe is about to encounter great catastrophes, a breaking in pieces of the whole building of the present social organization, events of which the destruction of the States of the Church is only the harbinger, so to speak, the first of the messengers of Job.

Here, then, we have the occasion of the famous lectures, which set, not Munich only, but all Europe, in an uproar, and which have necessitated this volume. On the present occasion, Dr. Döllinger goes with exhaustive fullness into the whole question of the temporal power; traces its rise, its workings, its effect; adds fact after fact, precept upon precept; and, finally, sums up with irresistible logic and eloquence worthy of his conclusions. His unsparing condemnation of the present system of government pursued in the States of the Church is the more remarkable that it does not come from a philo-Italian, from an advocate of nationalities. The chief clerical opponents of the temporal power have been Italians desirous of seeing their oppressed country freed from

its trammels. Dr. Döllinger is a decided enemy of the only government that will content Italy. He considers the Church a means of uniting all nations, and, therefore, superior to national considerations; and for this his arguments against the temporal power are the more valuable. Nor does he wish for its destruction—for that entire wiping out of a bad government so ardently desired by Italy and by all the Liberals of Europe. He will not allow the Pope to be a subject; he believes that they will lose ground by the loss of the Pope, and that Roman delegates will once again ask him to return. These views are as widely opposed to the views of mere politicians as to the views of mere theologians; yet they are more thoroughly consistent, more upright, more worthy of esteem, than the crazy patchwork of erroneous statement and diseased prophecy that the pro-Papal enthusiasts ask us to substitute.

Strictly speaking, the book is divided into two great divisions—the Papacy and the Temporal Power. The first part is more purely theological. After tracing the relation of the divers nationalities to Christianity, from the earliest times, Dr. Döllinger treats the Papacy as growing out of the nature of the Church, and then proceeds to review the churches which have cast off the Pope's supremacy, and the various sects which do not pretend to the name of churches. The other division, the Temporal Power, is subdivided further—Sketch of the States of the Church to the Time of the French Revolution,—the Internal Condition before 1789,—the States of the Church from 1814 to 1846,—and Pius IX. The history of the temporal power is full of interest for those who would trace the causes of its present collapse. We see the Popes at first subjects of the Roman Emperors, then of the Ostrogothic Kings; afterwards fighting, gaining and losing territory, acting themselves as belligerent monarchs, sometimes on the offensive, sometimes on the defensive, losing what they could not keep, reconquering what they had lost before. But here we cannot pause; nor on the Rome before 1789, with its nepotism of Popes and Cardinals; nor on Leo XII. and his abandonment of vaccination,—the points that stand out for their strangeness from the hurried summary of events. We come down to a more modern time, when the causes of the unpopularity of the Papal Government were beginning more plainly to appear. Under Gregory XVI., Dr. Döllinger says that there were two principal causes, which are felt down to this day—the influence of Austria and the clerical administration. The details given of the latter are scarcely paralleled in M. About's pamphlet, though they are conveyed in a very different spirit, and judged from a far higher point of view. "The priest," says Dr. Döllinger, "is the last to be intrusted with the execution of law, for, by virtue of his office, he is the herald of mercy, while the law is the dispenser of justice." The result of this confusion of the two attributes is a neglect of both,—mercy is not shown to minor offences which seem great to religion; justice is not inflicted on great crimes which are not against religion. Dr. Döllinger quotes a case which caused a great sensation in England, the Achilli case, and, after detailing the charges made against the Roman system of government in connexion with it, observes that neither in England nor in Rome was an answer attempted. He especially blames the usurpation of police functions by ecclesiastics—their jurisdiction over political cases—their directing the Lottery, which had been placed under excommunication by former Popes, and the immorality of which is universally allowed. He also dwells on the injustice

of trying laymen politically for offences against the clergy, and of visiting guilty clergy with a minor punishment. After detailing an edict issued by the Inquisitor Aivaldi in Ancona, in 1856, in which the denunciation of all offences against the Church was made incumbent on every one, under the severest penalties, Dr. Döllinger remarks:—

It appears to be really the case that in the Roman circles people have no idea at all, or an idea very far distant from the truth, of the enormous power of journalism, and of the public opinion which is formed by it or is reflected in it. Everybody who is acquainted with the state of Europe and the relations of the different powers must be forced to admit that three such cases as that of Achilli, of Aivaldi (with similar ones that happened before), and of Mortara would have more weight in the scale in which the question of the state of the Church is being weighed than a battle won or lost.

Dr. Döllinger does not consider Pius IX. at all answerable for the radical defects of his system of government; he quotes the French and English ministers, Rayneval and Lyons, to prove that the present administration is not in fault, and he believes that the Pope is far from being content with the measures that he feels bound to follow. Yet the solution which he offers might, before this, have been practicable if the Pope had been competent; and we fear it will hardly be accepted as practicable now. At least, it is worth hearing:—

Fortunately, the sovereignty of the Popes is of a very elastic nature; it has already passed through very various forms. If we compare the use that the Popes made of their sovereignty in the thirteenth or fifteenth century with the form of government introduced by Consalvi, we can scarcely find a greater contrast. It is not merely possible, it is very probable, that it will now, even though after a forcible interruption, adopt that form which answers the character of the age and the exigencies of Italy. Should this happen, the Papal dominion will have great advantages over all other governments, and then will the nations gladly return under the Papal sway. What hinders us, then, from looking to a conjuncture in which the elections for the Papal honour will fall no more upon men worn out with age, but upon men still powerful, and in the vigour of their life, when the people will be reconciled with their government through free institutions, and share in the ordering and disposing of their own concerns; the higher classes contented by the opening of a comfortable sphere of activity in public affairs? In such a situation of the States of the Church, an open and speedy administration of justice would possess the confidence of the people, a decent spirit of corporation, a sense of their position awakened by honour and official integrity, would prevail among the functionaries,—the hostile chasm between clergy and laity would be filled up by equalization in rights and duties,—the police would no more be supported with religious means, and religion would no longer limp upon the crutches of the police. The Pope and his territory would stand under the protection of the Catholic powers, the same powers which have guaranteed the neutrality of Belgium and Switzerland, and have even placed the integrity of the miserable Turkish Empire, which is falling to pieces of itself, under the security of European right. Covered by this shield, ruler of a quiet, contented people, he would have his hands quite free. The barriers of material and spiritual intercourse, which till now have kept the single Italian countries apart from each other, in an unnatural severance, would fall: by means of international relations and a certain freedom of action, as enjoyed by the University Professors in Germany, the aspiring spirits of the country would have the political and military employments throughout Italy for a career. The Pope, however, would have neither home nor foreign enemies to fear; his subjects would be free from the odious conscription; the budget of his State from the burden of military expenditure; a few brigades of gendarmes would be sufficient to

provide for public safety. Money would not fail to execute projects for the public good. This is no empty picture of the imagination. If we look away from the evils and imperfections, each one of which can be healed if goodwill and due insight on the part of those who have to take measures for them are supposed, and if we imagine a quiet, orderly state of things in Italy, the Government of the Papal States might be a model government—a pattern for all other states and administrations. That it should be such a model has been said not only by Tommaseo, but also by the Bishop of Orleans, whose work the Pope himself has declared to be the best of all that have appeared in defence of the Papal dominion. Even Dupanloup has pointed it out as a first requirement, that the States of the Church ought to be more prosperous, better administered than other countries; that the people ought to be more contented than any other. And he, too, acknowledges that those “who, under pretence of dogmas, maintain that the Pope ought not to put his government in harmony with the exigencies of modern times and the legitimate wishes of the people, declare thereby that the destruction of the Papal Government is inevitable.” If we consider the high authoritative testimony which this book has received from Rome, we must detect in these words a hopeful and encouraging promise.

Here we must part from Dr. Döllinger. If we differ from him on many of the points he has urged,—if we are more sceptical than he is about the regeneration of the Papacy,—if we look at Italy and the Italian Government with very different eyes from his, we are at least contented to accept his conclusion, and to agree in the restoration of the Papacy whenever it may be purified. Till then we warmly echo the choice of Italy, and anxiously wait for what even Dr. Döllinger thinks probable—the removal of the temporal government.

NEW NOVELS.

The Romance of a Dull Life. By the Author of ‘Morning Clouds.’ (Longman & Co.)

THIS book is written in pure and forcible English; the style is excellent; the delineations of scenes and characters are given with a discriminating skill, which brings the reader into their very midst; the characters are all human beings, whom the reader could recognize in a moment if he were to meet them bodily. We have seldom read a work wherein the scenes and characters bore such unmistakable marks of veracity. With all these excellencies, however, it is the most oppressive story we ever read. We have heard of “a book for a rainy day”; but to read this “Romance” upon one of the “days that are dark and dreary,” it would be enough to induce *felo de se*. This life has sorrows enough, and men and women are often miserable enough, God help them! but in no life does sorrow come with the dull, dreary, unrelenting, even down-pour of wretchedness that we find condensed in this volume. We are pretty well hardened to most of the forms of woe to be met with in prose and verse; but as we read of the hearts of judges, jailers, and even of executioners, being sometimes melted with pity for their victims, so we confess that we could not read this book through, and assist at the torture of the poor young heroine of this “Romance”;—it is like being present at a demonstration of vivisection!

The heroine selected to go through the life discipline of this “Romance” is a good and very interesting young girl, with a touch of genius in her nature which makes her of quite a different mould from those around her. She is placed in the very dullest and most hopeless of environments; the people around her are dull from torpidity of feeling and obtuseness of perception; they are not bad

people at all, only their faculties are dull; and they do not like to be put out of their way. They live away from all society, because they cannot give dinners in the style which they fancy would be expected from them. The father is a man of some cultivation; but the habit of seclusion has grown upon him until the presence of a visitor is irksome. He potters over his economical difficulties, which, after all, are of a temporary nature, and more imaginary than real; but they serve as an excuse for keeping down all pleasure and gladness. He finds a gloomy satisfaction in advising frugality, and fewer coals on the kitchen-fire. When he has alarmed his wife and distressed his daughter, he placidly returns to his book with a relieved mind. His wife is not ill-natured; she is a dull, limited, conscientious, and thoroughly uncomfortable woman; she curtails everybody's comfort, and fancies it essential to good management; she wears distressingly ugly clothes, which fit badly, and she believes that their ugliness is somehow allied to economy; but they keep her in a constant state of dissatisfaction when there is any one to see them. She is a gentle, worrying woman, described with the truthfulness of a photograph; but the reader is made to endure the full weight of her uncomfortable presence. The account of her is not enlivened by the least touch of fun or humour. Constance, who is the daughter of her father's first marriage, is very interesting; and it is enough to break the heart of a sympathizing reader to see how she is, from the very first page, thwarted, and how all the little budding chances of happiness are brushed away by the clumsy stupidity and want of all perception in those around her. She is shy, yielding and obedient, and does not understand how to manage for herself. A most charming and fascinating young man is brought to her side by destiny, and he actually falls in love with her; but the stupid inattention of both stepmother and father, who do not feel sufficient interest in anything to see what is before their eyes, spoils the chance of a declaration when it is on the very brink of being made;—her own “ill-fated shyness,” as the author calls it, prevents Constance on another occasion giving Basil an opportunity of speaking to her, when he asked her; in short, the golden moment is lost, and never returns. Basil goes abroad, believing her indifferent, and half mortified and half angry, falls into the snares of a bold flirting girl, who has no scruple in showing how much she admires him: he becomes indifferent to Constance, marries the wrong woman, is miserable, and dies without having the chance of repairing his mistake. Constance, who was deeply attached to him, suffers terribly, and the minute miniature touches by which all the small events which make up the story are depicted, evince wonderful powers of insight into this phase of life. But there is no relief to the dull monotony of the heroine's sufferings; the reader is obliged to share her sorrows until the sympathy becomes unmixed pain. The intense passionate affection, buried beneath the silent, timid manner, is very well given; the progress of the heart-wearing sickness, the little gleams of hope and their gradual fading away into the dreary certainty of failure, the joyless, oppressive, unrelieved heaviness of her life, are painted with wonderful skill and minuteness; but they make of the story a mere anatomical diagram, showing how the nerves quiver and the heart beats under this kind of torture. The healing process, although indicated, is not effected, at least not upon the sympathies of the reader. She pays a visit to an old uncle in Wales, who being a man of feeling and perception is able to understand her without the need

of words. Her spirits begin a little to revive, and the reader is just beginning to hope that either Basil's ill-suited wife will die, and that he will return to Constance, or else that fate has some other or better lover in store for her, when a certain Mr. Leslie, a *borné*, impracticable, worthy young man, whose uncongeniality makes the reader shiver, steps forth and would be glad to marry her—if she would have him; and that is all the compensation the author has to bestow, unless indeed the fact of Basil's death, by making it lawful for her to love his memory and nurse her constancy, is to be considered an equivalent. There is little or no story: the monotony is entirely unrelieved, the details of all the hopes and fears and distresses of Constance are the only topics brought before the reader: the story is not only dull, but so painful that we cannot imagine this book being read, except as a study. There is so much real misery in the world that in a novel the reader hopes to find a little ideal happiness. ‘The Romance of a Dull Life’ is depressing, not strengthening, in its effect; and in this respect resembles the last work of the author.

Martha Brown, the Heiress. By the Author of ‘Dorothy.’ (Parker, Son & Bourn.)

THE history of Martha Brown is interesting and original; and it is related in a sharp, concise manner, which renders it very pleasant reading. Martha herself is not a captivating young lady: she is plain-looking, rough, hard, *brusque* and strong-minded to a painful degree, with enormous hands encased in dark gauntlets, and a general contempt for personal appearance and the conventionalities of social life. Martha has been brought up by an eccentric, worldly-wise old gentleman, her great-uncle, who, dying, leaves her a gigantic fortune, and much shrewd advice as to the best mode of taking care of herself and his money. Martha has also a lover, a visionary and enthusiastic young doctor, with a strong desire to sacrifice himself for the good of the public. He therefore starves in a garret, because he considers it a meanness to secure a good practice at the expense of his rather Quixotic scruples. Very much against his principles, Ambrose Arnold finds he has unconsciously fallen desperately in love with the rich Miss Brown. In vain he rebels against his fate. His own sister is married to the clergyman of the parish in which Martha rents a large estate, and Ambrose naturally frequents the parsonage-house. A medical man is required for a poor and neglected district in the neighbourhood. Miss Brown promises to defray half the expenses if a suitable man can be found. Mr. Erle mentions his brother-in-law; and Ambrose, having lost in old Mr. Brown his last *paying* patient, is starved into accepting the proffered situation. Lest, however, any of his relatives should suspect him of so base a motive as a desire to be near the heiress, Mr. Arnold spares no opportunity of abusing the lady, in unmeasured terms. He announces energetically that he “dislikes her particularly”; that “she is a hard, overbearing woman, with all the pride of riches, which is even more offensive than the pride of birth”; and that he thinks her “vulgar-minded.” He believes, if he were called in to attend her, “the temptation to poison her within the week would be too strong for his weak nature.” He all but insults her to her face, and informs her that there will not be much danger of her interfering with his schemes as “mutual antipathy will keep them apart.” Altogether, a more disagreeable lover can hardly be imagined. Martha Brown, fortunately, rather prefers that sort of thing, and perhaps, at the bottom of her heart, sees through the disguise, for she certainly makes no attempt

to conceal her own feelings; and Ambrose rushes headlong into a proposal, aided and abetted by his pretty little niece, Helen Erle, whom Martha has chosen for her confidante in the matter.

Mr. Arnold's character is not, however, improved by his happiness. He is now exacting, unreasonable, suspicious and hasty, and poor Martha has a hard time of it. Ambrose insists upon her keeping the engagement a profound secret for a year, at the end of which time he announces his intention of being able to offer her a suitable income. Martha has too much good sense and knowledge of the world to believe this possible, but she humours her future husband as if he were a spoiled child, and promises to do "exactly as he pleases in everything." Even these concessions, however, do not content the unreasonable young man, and he soon throws up his employment at the brick-fields, breaks off his engagement to Martha, and goes off to Liverpool in a huff.

The villain of the plot, a soft-spoken gentleman-like Mr. Lionel Benson, whose father is a lawyer and trustee to Miss Brown's property, acts all this time as a kind of spy upon his proceedings. He flirts shamefully with pretty little Helen Erle, forces himself into the county society, makes mischief, raises false reports, persuades Ambrose (with very little trouble) that Martha is false to him, and finally decamps to Geelong with all Miss Brown's fortune in his pocket. Not that Martha cares much about that part of the business. She has a farm in Wales and a few hundreds a year still preserved intact—and she bears her change of fortune with stoical calmness and indifference, and takes to farming, as a pursuit. Helen pays her a visit, and falls in with a Welsh squire of high degree and a long name, who behaves better than Lionel Benson did, and proposes with all due formality, at the proper moment. Ambrose Arnold, having rendered Miss Brown essential service in the management of her affairs, once more comes forward, meek, penitent and subdued, and Martha being more in love with him than ever, takes him for better for worse—and, it is to be hoped, makes the best of her bargain—for she is really, in spite of her eccentricities, a very devoted and true-hearted woman, and worthy of a better fate than being the wife of so weak, petulant, unsatisfactory a man as Ambrose Arnold must have remained to the end of his days.

We give the *résumé* of this story in detail, with a view of enticing our readers into the perusal of the book itself, for it ranks, we can assure them, far above the common run of fictional publications. The work is cleverly written, the characters well depicted, and the conversations particularly good, easy and natural. "Martha Brown" is a very superior young woman, and will, we doubt not, succeed to the well-merited popularity of her predecessor, "Dorothy."

OUR LIBRARY TABLE.

Public Reading: the Causes of its Defects; and the Certain Means for their Removal. By Alexander Bell, Professor of Elocution. (Nisbet & Co.)—We are glad to see that the study of our mother-tongue is, in every sense of the noun, beginning to be recommended as a matter of some importance;—having been long convinced that no European language has been, till of late at least, so habitually ill-delivered as the English language.—For this, many reasons and apologies could be assigned: one, we cannot but perceive, is, to some degree, shadowed out in this treatise or lecture. Besides polyglott affectation (the same which makes certain talkers unable to help themselves out without the intrusion of foreign words),—besides the slovenly indifference to which a large portion of our

man and woman kind resigns itself, careless as to choice of expression and inflexion of voice,—there is such a mistake as the attempting to make too much of a good thing—as pomposity and elaboration.—Some temptation to these is to be found in Mr. Bell's treatise, as the following passage will testify—the italics in which are ours:—"To be capable of reading or speaking naturally, the articulative organs of the reader must be duly trained in the minutiae of pronunciation—the tongue, the breath, and the lips, by proper discipline, rendered capable of discharging their distinct functions without clashing, coming in contact, or obstructing each other—the voice pitched in a deep key—each of the vocal strokes sonorous by the vibratory power of the lingual member—the respiration so regulated that, while inhalation precedes the enunciation of every sentential arrangement of words, the current of breath during its way to the lungs shall not conflict with the current of breath coming from the lungs—and the words or sentences to be read must be divided into groups, grammatically and logically; and the delivery shaded by all the variety of feeling, emotion and passion of which the words are susceptible." There may be such a thing as good public reading—without "the voice being pitched in a deep key."—Throughout this pamphlet we find too strong a tone of the "show-treatise," and conceive that, were its precepts too literally taken to heart, the results would be too stilted and declamatory,—resemble too closely a set, solemn harangue to satisfy nice and discerning ears. The Kemble style was good for the Kembles. Mr. Macready's totally opposite method was adopted because it suited himself; but that the imitation of these two popular examples has gone to the verge of destroying everything like nature and truth, among the serious actors of England, cannot be questioned.—We stop a good way short of "the deep key."

The Criminal Law Consolidation Statutes of the 24 & 25 Victoria, Chapters 94 to 100. Edited, with Notes, Critical and Explanatory, by James Edward Davis, Esq., Barrister-at-Law. (Butterworths.)—Those who have heard with faith the swelling promises of the consolidation of the statute law, with which Englishmen have for some years been amused, will be sadly disappointed in these Acts, which are the first-fruits of this much-vaunted and much-jobbed movement. On the other hand, persons who have watched the proceedings of the Commissioners are not in a position to be disappointed by anything. The mountains have laboured, and we have got our mouse. We expected no more; but shall be glad to hear from Mr. Bigg, or some other gentleman with a turn for such inquiries, what the mouse has cost us. The present statutes consolidate only portions of the criminal law. They comprise the law relating to accessories and abettors of indictable offences, to larceny, malicious injuries to property, forgery, offences against the coin, and offences against the person. They leave untouched offences against the State (except as regards coinage), offences against public justice, perjury, gaming, libel, smuggling, and many other offences; and they do not affect the law relating to criminal procedure. They are, as the author remarks, little more than new editions of "Peel's Act," embodying the subsequent legislation on the subjects comprised in those statutes. The chief alterations effected by these statutes are, the assimilation of the law of England and Ireland, and changes in the amount of punishment awarded to particular offences. In these changes we cannot but think that the Legislature has carried the reduction of capital punishment too far. It is startling, within a few weeks of the time when a capital sentence was carried out in a case of attempted murder, with the full approbation of all (except those who object to capital punishment in any case), to find that this crime is now one which could not be punished further than by penal servitude for life. By the new Acts, murder only is a capital offence. Capital punishment was retained in the bill, as originally drawn, for administering poison with intent to murder; but this was struck out by the Committee of the House of Commons! The author's notes in the book before us are concise, and contain much useful information; and there is

a good Index. These Acts leave various anomalies in the scale of punishment; for instance, if you conspire to murder a man, the greatest punishment that can be inflicted is four years' penal servitude; but if you go by night to murder a rabbit, you may be sentenced to fourteen years' penal servitude! These anomalies, together with some defects in the construction and language of the statutes, which are neither few nor unimportant, are duly pointed out in the Introduction and Notes.

A Manual of British and Foreign Plants, &c. By L. Grindon. (Pamplin.)—Under this name we have a classified catalogue of the names and native countries of all our wild plants that bear flowers, and of a good many that are commonly cultivated. Where English equivalent names exist they are added; and as a good Index of them all is provided, the amateur may easily find something about most of the plants of usual occurrence. The volume is neatly printed, and will probably be useful to inquirers after common plants. The names are all accented, and, in general, correctly; but we must observe that the *i* in *judicium* is not short, nor the *o* in *lobus* long, nor the *e* in *stemon* short. A good many such mistakes catch the eye of the critic, and should be rectified.

Thoughts and Hints on Education. By G. Rumsey, LL.D. (Parkins & Gotto.)—A tract of thirty pages, containing some average notions, and apparently intended to illustrate—perhaps to advertise—the writer's school: we beg pardon, the college of which he is the principal. It begins with the question, "What is mind?" and ends with "One well-disciplined character ennobles a thousand. Like oil on the troubled waters, it smooths the asperities of life; like the sun in the firmament of his power, it warms and resuscitates to existence by a genial influence all that is lovely to sight, to taste, to touch. . . ." If a well-disciplined character can do all this "like the sun," it must be a fine thing: and if the author should write many tracts like this, and send them to literary journals to be noticed, he will himself be a well-disciplined character in process of time.

On the Theory of Equations. By I. Todhunter, M.A. (Macmillan & Co.)—This is a new number of Mr. Todhunter's series, which grows in value with its size. It has some matters not usually given; among other things, a chapter on Determinants.

Euclid's Elements. By R. Potts, M.A. (Parker, Son & Bourn.)—This work is now well established: and we have nothing to do, except to announce this improved and enlarged edition.

Of miscellaneous and other pamphlets, we have to notice *The Cotton Crisis, and How to Meet It*, by J. Bourne (Longman).—*Shall we Make the Volunteer Force Permanent?* by Sir A. H. Elton (Booth).—*Indian Resources Applied to the Development of India*, by R. Benson (Smith, Elder & Co.).—*Education in the Army* (Hatchard).—*On the Sounds caused by the Circulation of the Blood*, by Dr. Leared (Churchill).—*A Reply to the Observations of the Quarterly Review, on the Autobiography of Admiral the Earl of Dundonald*, by Marcus (Bentley).—*Indian Railway and Flotilla Guarantees examined and found to be Delusive*, by J. LIST OF NEW BOOKS.

Almanach de Gotha, 1860, 22mo. 5s. bds.
Archbold's General Orders and Forms in Bankruptcy, 1861, 1s. 6d.
Athenion's Israel in Egypt: a Poem, 8vo. 15s. cl.
Authors of England, a Series of Medallion Portraits, n. ed. 10s. 6d.
Aymer's Distant Homes: or, Grahams in New Zealand, 16mo. 3s. 6d.
Baynes's Lyra Anglicana, Hymns and Sacred Songs, 8vo. 3s. 6d.
Bonar's Hymns of Faith and Hope, 2d Series, 8vo. 5s. cl.
Brandon on Customary Law of Foreign Attachment, 8vo. 14s. cl.
Bullock's The Way Home; or, Gospel in the Parable, 5th ed. 2s. 6d.
Burton's City of the Saints, 8vo. 18s. cl.
Calderson's Love the Greatest Enchantment, by M'Carthy, 15s. cl.
Cavour, a Memoir, by Dicoey, 2d ed. crown 8vo. 5s. 6d. cl.
Chretien's Letter and the Spirit, 812 Sermons, crown 8vo. 5s. cl.
Cobbett's French Grammar, 11th ed. 8vo. 2s. 6d. cl.
Coutley's Word-Expositor and Spelling Guide, 12mo. 1s. 2d. cl.
Cumming's Teach us to Pray: the Lord's Prayer, 8vo. 3s. 6d. cl.
Davenport's Little Toys; or, Our Four-Legged and other Pets, 2s. 6d.
De Gasparin's Four Homes, adapted from French, by Mann, 3s. 6d.
Downing's Short Notes on St. John's Gospel, 12mo. 2s. 6d. cl.
Ellis's Lelia Marston, Vol. 1, crown 8vo. 10s. 6d. cl.
Elmer's Lyrical Regulation Act, 1863, &c., with Gen. Orders, n. ed. 7s.
Elmes's Guy Rivers; or, a Boy's Struggles in the Great World, 5s.
Euclid's Elements of Geometry, by Potts, new edit. 8vo. 10s. cl.
Euclid's Plane Geometry, Books 1-6, by Green, 12mo. 4s. 6d. cl.
Evans's Boy's First Verse Book for Beginners, 12mo. 1s. 6d. swd.
Gosse's Romance of Natural History, 2d Series, 8vo. 7s. 6d. cl.
Gajadhy's Abhidhanaratnamala, Gloss, by Aufrecht, 8vo. 18s. cl.
Hemans's Poems, new edit. royal 8vo. 15s. 6d. cl.
Herbert's Works, Prose and Verse, with Memoir, by Walton, 3s.
Interviews of Great Men, their Influence on Civilization, 6s. cl.
Jones's 100 Lectures on Ancient & Modern Drama, Nos. 1 & 2, each 1s.
Karlsruhe's Exposition of the Lord's Prayer, 8vo. 7s. 6d. cl.
Kingston's Annual for Boys, 1862, royal 16mo. 5s. cl.
Lamb's Tales from Shakespeare, 24mo. 2s. 6d. swd.
M'Cosh's Method of Divine Government, 7th ed. 8vo. 10s. 6d. cl.
Mackenzie's Help for the Helpless, 2d ed. 8vo. 5s. cl.
Marshall's Treatise on the Duties of Railway Cos. & Carriers, 10s.
Martha Brown, the Heiress, by the Author of 'Dorothy', 5s. cl.
Marrat's Every-Day, 18mo. 1s. 6d. cl.
Martin's Influence of the Bible on Europeans, 2nd ed. 20s.
Mather's Glossary, Hindustani & English, New Test. & Psalms, 7s.
Mayhew's Young Ben Franklin, new edit. 8vo. 5s. cl.
O'Flanagan's Gentle Blood; or, the Secret Marriage, 8vo. 5s. cl.
Parley's Annual, 1862, 16mo. 5s. cl.
Paul Duncan's Little Book of Soliloquies, 8vo. 3s. 6d. cl.
Petersdorf's Principles & Practices of the Law of Bankruptcy, 7s. 6d.
Pizzini's (Mrs.) Autobiography, Letters, &c., ed. by Hayward, 24s.
Pretty Little Tales for Good Little Folks, royal 8vo. 2s. 6d. bds.
Procter's Legends and Lyrics, 2d ed. 8vo. 5s. cl.
Reade's Cloister and Hearth, 2d ed. 4vo. 8s. 6d. cl.
St. James's Magazine, conducted by Mrs. Hall, Vol. 3, 8vo. 5s. 6d.
Saunders & Cox's Criminal Law Consolidation Act, 1861, 10s. 6d.
Shakespeare, Stratford, edited by Knight, new ed. V. 6, 12mo. 3s. 6d.
Sir Richard Hamilton: a Novel, 2 vols. post 8vo. 7s. cl.
Spiritual Concepts, edited by the Fathers, Ill. by Rogers, 21s.
Stomton's School Grammar, 8vo. 1s. 4d. cl.
Story of a Bee and her Friends, illustrated, 16mo. 3s. 6d. cl.
Struth's Teaching in the Scottish University, 8vo. 1s. swd.
Stuart's Key to the Emblems of Solomon's Song, 16mo. 2s. 6d. cl.
Temple Bar, conducted by Leslie, Vol. 3, 8vo. 2s. 6d. cl.
Temple's English & French Money & Measurement Compared, 1s.
Tennent's Sketches of the Natural History of Ceylon, 12mo. 6d. cl.
Thring on the Criminal Law of the Navy, 12mo. 5s. 6d. cl.
Tilley's Digest of the Stamp Acts, with Tables, 8th ed. 8vo. 12s.
Tom Brown at Oxford, by Author of 'Tom Brown at School-days', 21s. 6d.
Tommy Trot and his Love, royal 8vo. 2s. 6d. cl.
Tracts for Priests and People, Discent and the Creed, 8vo. 1s.
Trollope's Tales of All Countries, 8vo. 10s. 6d. cl.
Von Sybel's History of the Crusades, ed. Lady Duff Gordon, 10s. 6d.
Wallace on the Deposition of Leases Ore in Yarns, 8vo. 2s. 6d.
Wardlaw's Poetical Works, edited by his Son, V. 6, 12mo. 5s.
Wilberforce's Addresses to the Candidates for Ordination, 6s. cl.
Winlow's Morning Thoughts, July to Dec., new ed. 18mo. 2s. 6d.
Woolsey's Narrative of the War with China in 1860, 8vo. 10s. 6d.
Wisdom of Solomon, illuminated by Stanesby, 4to. 14s. cl.
Young Step-mother, The, by Author of 'Heir of Redclyffe', 10s. 6d.

NOTES ON THE HISTORY OF PERSPECTIVE.

(No. IV.)

November 6, 1861.

Guido Ubaldo, Marquis del Monte, who died about 1608, published in 1600 his 'Perspective Libri sex' (Pisauri; folio). On the career of this remarkable man see Libri, vol. iv., p. 79. He is called Guido Ubaldo by most writers: but this arises from the genitives 'Guidi Ubaldei e Marchionibus Montis' in his title-pages, and perhaps from the analogy of Galileo Galilei, which is quite another thing. He was the first who published a theory in which the vanishing point is fully extended to all systems of parallels. The step seems very small when we look back: but had it not been for this step we should have had a great deal less to look back upon.

It is almost universally stated that what Ubaldo did was to adopt all the vanishing points which lie in the horizontal line, not confining himself to the centre and the points of distance: and it is frequently supposed that no one used any vanishing point out of the horizontal line before Brook Taylor. This is not correct. The only exception I have met with to this unjust limitation of Ubaldo's

right is in the work on Perspective (1850) by Mr. G. B. Moore, which exception I found in time to insert it here. Mr. Moore, however, though stating that Ubaldo enunciated the general principle, adds (p. 29) that he "confined it to level planes," which is not correct, though, like all other writers, he found much more use for the points which belong to horizontal lines than for any others.

As Ubaldo's work is rather scarce, and—better reason still—our modern geometers, sometimes even when they write history, have a reluctance to read as much as the enunciations of old books, I quote in his own words the announcement of the vanishing point in general, and of the way of finding it. The reader will take notice that *sectio* is the picture; that *equidistant* is a synonyme for *parallel*; and that this proposition is a professed generalization, horizontal planes having been already treated.—

Lib. I. prop. xxvii. Si oculus æquidistantes vident lineas, quæ cum sectione convenire possint, lineæ in sectione apparentes in unum punctum concurrent æqualeum supra planum lineis parallelis æquidistant, ut oculus.

Coroll. I. Ex his perspicuum est, in sectione punctum, in quod ab oculo parallelis lineis ducitur æquidistant, esse punctum concursus.

Here, then, is the general vanishing point, and the way to find it: I am now to show that other than horizontal vanishing points are used. Ubaldo does not draw pictures, any more than Euclid measures fields: it is enough that I should produce one from among the elementary problems which contain the thing required. In book iv. prop. 27 a circle inclined to the ground plane—"Dato circulo subjecto plano inclinato....."—is put into perspective by help of the vanishing point of the diameter which is perpendicular to the horizontal diameter. Any one having a common knowledge of perspective, even while listlessly turning the pages, would have been struck, one might suppose, by the point μ outside the horizontal line XV, in which two lines meet in a point to which three others converge. And then, one would imagine, he might have had the curiosity to ask whether μ could be a vanishing point: and throwing the eye to the bottom of the page, where μ is conspicuous in two successive lines, he would have found as follows—

"His inventis, quoniam lineæ FB MI AC NL GD sunt parallele, in sectione in unum, et idem punctum concurrere apparent. quare productæ PY KZ convenient in μ . deinde à punctis QST lineæ ducantur Q3 S8 T9 quæ in μ tendant."

I am tempted to be thus particular about the matter, because it may be advisable to give very definite reasons for the slighting manner in which I have spoken of the historians of Perspective, so far as I know them. If there be a thing in which all these historians agree, it is in stating that Ubaldo's extension covers only the horizontal line.

One producing cause of the mistake is this. Ubaldo knew perfectly, not only that the points on the horizontal line are by very far the most important, but also that the complete exhibition of this line, as a locus of vanishing points, would be far more striking by way of advertisement than the still higher generality of the perfect principle. Accordingly, he hung out a sign full of meaning in his title-page. He drew a diagram representing a pentagonal prism with horizontal ends, and one pair of base edges parallel to the picture: there are consequently four vanishing points wanted in the horizontal line. The edges are lengthened by dotted lines as far as the vanishing points, a middle section being also given for additional illustration: the horizontal line is drawn, and above it a scroll with the words *Citra dolum fallitur*. Ubaldo says to his contemporaries—You never use more than three vanishing points, you see I can use four: turn over and find out what I mean. To this it may be added that, by way of augmented surprise, neither of his four points looks like that of sight or of distance.

There is in Ubaldo much detail on construction of circles and curves, on shadows, &c. He also enters, far more than his predecessors, on *perspective division*, the mode of dividing a picture line so as to represent equal subdivisions, or parts in any other proportion. To subdivide a line which is perpendicular to the picture, he makes it the side of a vertical rectangle, subdivides the vertical side

in the manner required, in which of course there is no perspective distortion, then subdivides the diagonal by lines drawn to the point of sight, and then the horizontal side by verticals through the subdividing points of the diagonal. We may smile at this process when we know Desargues and Taylor; nevertheless, this is a decided advance upon Viator and Barbaro.

In this subject, as in every branch of progressive skill, it may frequently happen that a writer shows signs of knowledge beyond what he can bring into steady use. Hence, according to the fancy of an historian or according to his national bias, one or another writer may be held the inventor of a process. Viator appears to have all the points in the horizontal line; but he only uses three: he has full power of perspective dividing the perpendiculars to the picture, but he does not get beyond covering the floor with equal squares. Guido Ubaldo has full power over all vanishing points, and uses all the points of the horizontal line, and some others; but he does not fully bring all vanishing points into system. He can divide any perpendicular to the picture; but he does not show how to divide any horizontal line. Desargues, to whom we shall come, makes a plaything of dividing any horizontal line, and shows his command over the method of dividing any line whatsoever; but this last very obscurely, and too late to be brought into the system. Here and there, in an unexamined corner, any one of these writers may show, for once, more power than I have allowed him to have; or another writer, unnamed by me, may seem to claim a place. But the true history of the subject requires that the great points shall be given to those who made great points of them.

Ubaldo had a contemporary who was quite as much up to the matter as himself, but who published five years later: one more instance of the almost universal principle that discoverers, like imaginary roots, enter in pairs. This was the celebrated Stevinus, whose 'Sciagraphia'—the first part of his Optics, the other two being Reflexion and Refraction—was published in the third volume of his 'Hypomnemata Mathematica,' at Leyden, in 1605. Stevinus distinctly lays down the general theorem of the vanishing point, and exemplifies it (p. 53) on the sloping lines of a roof. But it was not his good fortune to teach the world in this matter, and his name must not be associated with that of Ubaldo. His book is very little known: and I am not aware that he has been mentioned in modern time as a writer on Perspective, except by M. Chasles and by myself in the life of Brook Taylor in the *Penny Cyclopædia*. I doubt that any works of a man of the eminence of Stevinus are so little known as his 'Hypomnemata.'

Stevinus has touched a few simple cases of this inverse problem: given two plane figures, to find how the picture, the original plane, and the eye must be placed, so that one of the figures shall represent the other. This makes him to some extent a precursor of some remarkable points of the modern projective geometry. A synopsis of the 'Sciagraphia' of Stevinus was given by Mersenne in his 'Universæ Geometriæ... Synopsis,' Paris, 1644, 4to. No works of geometry were likely to reach the draughtsmen at once; least of all such recondite works as those of Ubaldo and Stevinus: even more simple expositions did not produce any effect upon them. The great expositors of the seventeenth century were the Jesuits, whose faults in other matters have thrown a cloud over their unsurpassed literary zeal and industry. Of these, four must be mentioned. Andrew Tacquet (1669) and Claude Dechaux (1674, 1690), in their large mathematical courses, gave good geometrical treatises, in which they clearly point out the general law of convergence of parallel lines, though using no more cases of it than others. These are the only writers I have found who may be considered as precursors of Brook Taylor in geometrical clearness. Gaspar Schott, in his 'Magia Naturæ et Artis' (1657) wrote at some length on Anamorphoses, or curiosities of perspective distortion: it was Schott who gave the first account of the air-pump, with the sanction of Von Guericke, who deferred his own publication. Dubreuil is commonly called the Jesuit, and his work

the "Jesuit's Perspective," because it is anonymous, with statement that it was written by a member of the order. It appeared in 1642, and again in 1751, as '*Perspectiva Practica*,' in three quarto volumes, with a magnificent quantity of good engravings; it was translated into English by E. Chambers, in 1726. There are only rules without demonstration, and it seems to aim at presenting every case that could possibly be wanted: I forget in how many ways he upsets a chair on the floor, to show how it is to be drawn; but I think six is under the mark. There is little use of more than the points of sight and distance. This work exercised great influence both in England and on the Continent: and for a book of mere rules, is as good as a book can be which uses such limited means.

The authors whom the Jesuit mentions as prior to himself, are Viator, Reisch, Cousin, Dürer, Barbaro, Vignola, Serlio, Du Cerceau, Sirigatti, Du Caus, Marolois, Vredeman the Frisian (of whom his printer makes two, Vredement, Vriesse), Ubaldo, Accolti, Vaulesard, Nicéron and Curabells. By this last name, and the omission of Desargues, we detect that Dubreuil belonged to the anti-geometrical party, of which I shall soon have to speak: this might be suspected from the book itself. Having thus caught him at one kind of factious suppression, I am obliged to give warning of the possibility of his having been guilty of another. It may be that this list is limited to members of his own church, to the exclusion of heretics: this trumpery practice—when without notice, trick—was not unknown among the writers of the order, and is not unknown among their strongest opponents. Clavius, one of the greatest, would not mention the first-class heretic Sebastian Münster, in his list of writers on Dialling: and he pirated Finck grossly, within three years of the appearance of his book. And so poor Clavius must be nailed to the barn-door 250 years after his death, because he played kite to the Protestant's chickens: and this without the smallest portion of the *animus furandi*, but only because he loathed a Lutheran. He should have imitated his opponent Vieta, who avoided the appearance of appropriation by acknowledging obligations to certain *Rhapsodi*, who are mentioned under no other name. Both Clavius and Vieta would have been shocked at a work on Logic just issued from Maynooth College, the writer of which quotes any one who serves his purpose, saint or sinner, papist or heretic, Thomas Aquinas or Thomas Hobbes.

The Jesuit's work begins the series of treatises which teach cases at length for those who cannot master principles. These works are the counterparts of the books on arithmetic which teach the rule of three in three places,—under integers, common fractions, and decimal fractions. This class of books is now very much thrown aside: but it cannot be said that proper substitutes are sufficiently used. The truth seems to be that, though practice is out, principle is not in. Perspective is not studied with effect by the mass of these whom it concerns; and a person who is really an adept is a rarity even among artists.

Since the publication of the last number I have learnt that the life of Viator therein alluded to is actually published. And from a note in a catalogue just issued by Mr. Tross, it appears that as early an edition of the '*Margarita Philosophica*' as that of 1508 contains the '*Perspectiva*' taken from Viator.

A. DE MORGAN.

THE POET BYRON IN A SNOW-STORM.

Brighton, October 29, 1861.

MYSELF a native of Aberdeen, I have recently met here in Brighton two Aberdonians, now septuagenarians, who were schoolfellows of Byron at the Aberdeen Grammar School. From them I have gleaned the particulars of an unpublished and remarkable adventure in the school life of the poet. Prior to relating it, however, I cannot omit remarking how vividly and freshly these septuagenarians still recollect the scene which occurred in the school when the name of Byron was first called out, with the prefix "*Dominus*." The surprise of his school-fellows, themselves generally the sons of well-to-do bourgeois and professional men, darting into Byron's

mind the conviction that the charm of equality was henceforth broken between himself and his play-fellows, the tears started into his eyes as he answered "*adsum*." Byron received his coronet as Victoria did her crown. Not long afterwards he left Scotland for England.

But I took up my pen to relate how the poet was nearly lost in a graveyard during a snow-storm, when he was but a small boy. The boys attending the grammar school, who were simultaneously learning writing, of Mr. Duncan, the writing-master, had every day at twelve o'clock to cross the graveyard of the parish church of St. Nicholas, on their way from the grammar school in the School Hill, to the writing school in St. Nicholas Street. One memorable day, on issuing from the grammar school, these boys confronted such a storm of snow and hail as has but rarely visited even the northern city at the mouth of the Dee. Under the shelter of the high wall of the churchyard the boys battled their way against the wind and the drift as far as the gate. But, here, the weaker boys were driven back by the hurricane, and remained, not daring to turn the corner or leave the shelter of the wall. The elder and stronger boys alone ventured across the wide, open, and exposed graveyard. Two of these offered a hand each, however, to little Byron, and all three dashing into the blinding and bewildering drift. My informant, Dr. —, a physician, who after practising many years in India is now residing in Brighton, was one of the two lads. No sooner had they entered the storm than the boys were overpowered by it, and let go their hold of each other, for it was then every one for himself. My informant was seated in the evening with his family when a servant came in great alarm, sent by Mrs. Byron to inquire if anything were known of the fate of her son, who had been missing since the morning. His schoolfellow could only answer, that every one having had to shift for himself, he had lost him amidst the snow in the churchyard; the only hope he could suggest being that Byron had found shelter under a tombstone,—flat tombstones resting on stones at each end, abounding in the churchyard. Dr. — believes, to this day, that men were employed to search the churchyard and under the tombstones, with lanterns, that they discovered little Byron under one of them, perishing of cold, and were only just in time to save his life. But this is a mistake. The other day I met a very old acquaintance of mine, known to me as a schoolfellow of Byron at the Grammar School of Aberdeen, Mr. Cruickshank, recently clerk to the County Court at Greenwich. When I was narrating to him this snow-storm story, as told to me by Dr. —, he approved of the narrative until I mentioned the supposition of shelter under a tombstone, when he exclaimed:—"No such thing! I was with him,—the weaker boys could not get into the churchyard at all. We could not leave the School Hill, and we found shelter in Mr. Leslie Cruickshank's hosiery; in whose kitchen we were dried and warmed, and sat waiting until our friends fetched us in the evening, when they could get to us, and found where we were. It was whilst waiting in this kitchen that I first perceived something of the poet in Byron, for to while away the time he told us a beautiful tale out of the '*Arabian Nights*.'" The slight discrepancy in these accounts of the adventure may be easily explained, by supposing that little Byron slipped out of the hands of his stouter comrades the instant he felt the full force of the storm, and was then driven towards the churchyard-gate.

JOHN ROBERTSON.

LAST NOTES FROM SPAIN.

Madrid.

THOSE among the tourists in Spain who are not overpowered into self-abnegation by the authority of a popular book may be more surprised than edified to find, as they proceed, proof on proof that, with all its historical research, its choice classical quotations, its more questionable sarcasms and passages of smart writing, and its fiercely partizan spirit,—Ford's '*Handbook*' is not satisfactory—at least as regards our days. His Madrid, I must repeat, is not the Madrid of 1861. In his Guide, the capital of Spain figures as a dull city, inhabited by a rascally and corrupt popula-

tion, from which the traveller is warned to flee away so soon as he has seen "the Gallery." This is not any longer a true picture.—Was it ever so? or have the Madrilenian gentlemen become intelligently courteous to strangers,—have the inn, and the shop, and the working and menial folk of the capital, become clean and civil, without greediness, since his time? Were there, when he wrote, no stately houses along the Prado? Had the Gallery—a low building, as a picture-gallery must needs be—not then its present *fapade*? Those who seek instruction would dispense with many of his venomous paragraphs against the French, and more of his omissions to the great Commander whose glory needs them not,—for greater accuracy of statement and a fairer construction of such things as did not happen to interest the writer personally.

Though his best has been done for the Gallery of Madrid, and though there is far more than lip-knowledge in the pages devoted to it,—a complete Guide to that wondrous collection of pictures is still wanted for the English, by comparatively few of whom it has been yet visited. That there is loose wording, if not careless statement of fact, on the part of the clever Englishman one instance will suffice to prove.—In the first part of the '*Handbook*,' p. 180, Alonso Miguel de Tobar is spoken of as "the best, perhaps, of Murillo's pupils—1678–1758." In p. 191, we are reminded of the date of Murillo's death, A.D. 1682, when De Tobar, the "pupil," was four years old!—The criticisms, too, when confronted with the pictures themselves, will appear to many more elaborately showy than distinctively shrewd. Wilkie's brief notes bring Velasquez somewhat nearer to us than columns of verbiage, or description by antagonism,—or by such a parallel as named him the "Homer" of Spanish Art, to its "Virgil" Murillo.—Spirit, it needs hardly to be told, is synonymous with his name.—The boy, Don Balthazar, on horseback,—a composed rider, enjoying his horse the while as a boy only does,—gallops out of the frame. The court damsels (oddly called "*pages*" by Ford) who amuse the Infanta Margarita are as anxious and obsequious as a pair of Fanny Burneys. The laughing Bacchanals in '*Los Bebedores*,' are neither "humorous" à la Teniers, nor "effective," in the style of Caravaggio, as described. They have a character and physiognomy of mirth, as distinct from those of the Flemings as is the taste of warm sherry or bitter Manzanilla from that of the heavy beer so dear to the Low Country sot. For this reality, this intense nationality in the Spanish painter, every one must have been prepared,—less so, perhaps, for his peculiar manner of painting; which is often light and flowing, but always solid,—less for his peculiar palette, in which bright and primitive colour has a small share, as compared with brown and olive tints (not forgetting the bluish-greens and the greenish-blues so largely used in his skies and backgrounds),—yet which is so managed as to give its master a vivid and emphatic place of his own, even when he figures among such richer and more many-coloured folk as Titian, Giorgione, Veronese, Rubens,—less still for his peculiar treatment of the flesh,—which, in reality, is often chalky, bloodless, and dusky in the shadows, in effect, none of the three.—I can call to mind nothing in touch and tone approaching the portraits of Velasquez, except (at a long interval) certain large groups by Frank Hals at Haerlem, in which some analogous qualities may be traced. I cannot recollect any character in which the manner of the painter is so defined, as to offer an idea of it to those about to make his acquaintance. Even the elaborate and admiring article, by M. Boulé, in the July number of the *Revue des Deux Mondes* seems, to an English eye, wordy, rather than shrewdly touching these characteristics which set the master apart among his countrymen. The task is well worth being undertaken by the most shrewd appreciator of style, the most precise, yet poetical employer of language.

The Raphaels and the Titians in the Madrid collection have had almost their due fame (though admiration may have been scarcely bounteous enough for the Venetian's '*Offering to Fecundity*,' unparagoned in its craftsmanship as a group of seventy children). But it has not been suffi-

ciently told how vividly Tintoretto has been represented here,—how his 'Temptation of Joseph' almost throws down the glove to the recumbent 'Venus' of Titian, near which it hangs,—how in his 'Sea Pirates' there are his never-failing audacity and accumulation, with that gorgeous flush and depth of colour, which has faded out of too many of his pictures.—Nor is the tourist, I think, duly prepared for the somewhat unfamiliar aspect in which he will meet Paul Veronese at Madrid as a painter—deep, religious and various in expression,—witness his picture of 'Cain and his Wife,' pathetic to intensity in the sorrow of the fearful, despairing, yet gently-loving woman, foiled by the degraded and shame-stricken outcast, the situation moralized as it were, by the pall-cloud which hangs over half of the fading sky,—witness his 'Sacrifice of Abraham,' in which the devotion of the innocent victim is no less deep,—witness—to enter the pagan world—his lovely Venus, keeping off intruders with her fan from her sleeping Adonis (the lover somewhat too brawny),—a mythological dream, as fresh in its colour-splendours as if it had come from yesterday's easel.

To come down from the great things of Art to the small comforts and interests of to-day's journey, a travelling hint or two may be worth giving to those about to make holiday in Spain, without preparatory knowledge of its ways and means. The married man may once for all clear his mind of an idea of taking a real old Spanish fan for his wife at home. He will find one, if anywhere, in Paris, and cheaper:—but he may invest judiciously in the black lace of Almagro manufacture, which is rich, effective, real and not costly. Other temptation to "shop" is small. Old books seem to have hardly any existence,—nor old manuscript music.—Then, as to creature comforts, the fare is poor, though rarely, if ever, revolting. The lover of cooling drinks will do well, when at the coffee-house of Madrid, in which he is sure to find himself at some portion of the evening or other, to try the mixture of beer (a light beer) and iced lemonade, which freshens the palate heated with Spanish wines. These are among the modes that change year by year, of which travellers are glad to be apprised. Perhaps the Spanish cookery so ecstatically vaunted by Ford may have gone down:—or are *garbanzos* essentially dry!—and is green pimiento swimming in oil a dainty dish?—and have the fowls exceptionally lost all their flesh during this merciless comet-summer?—and must one, nevertheless, if bent on ripe fruit,—such as a peach fit to eat, or a dish of wild strawberries, or grapes which melt in the mouth,—go out and submit to the creeping things in the Fonda del Milanais at Aranjuez? or make a pilgrimage to the gorgeous and perfumed muscatel grapes at Malaga?

It seems hardly possible to estimate the amount of good which railways may bring about—even though they diminish the amount of that picturesque travelling on horse or mule back in which athletic tourists, content to rough it, have found so much delight,—even if they emancipate that handsome quadruped the Spanish ass from his present terrible duties as bearer of burdens and merchandise.—Who knows what picturesque places these new peremptory channels of intercourse may not disinter? I find, for instance, no mention in the "Book," of Almodóvar—a station betwixt Cordova and Seville—with a castle on a rock dotted with olive-trees, looking down on the Guadalquivir, far more arrogantly lofty and picturesque in its site than any of the castles in the Rhine-land, or in the Eifel, so well known to pedestrians.—Coming from Seville, its aspect, especially if approached at sunset, is yet more striking.—Generally, the people, conservative as their habits are, seem to have found out the value of the new mode of communication, with eagerness. Past travellers' tales of the discomfort of hotels in the towns will be soon so many obsolete legends. What engineering has done, engineering may do. The Spaniards having tasted the comforts of quick locomotion, may begin to ask, ere long, whether the mechanical and practical genius of shopkeeping England (so perpetually sneered at by Ford) might not introduce some schemes of restoring, by irrigation, the fertility and foliage of dis-

tricts, now parched with drought. I cannot feel that we have been moving about among a people dying or hopeless, howsoever pathetic in some matters,—and thus cannot but wish that every least encouragement, promising progress, should be set forth,—that every change from lustre to lustre should be registered and laid up,—and that the land, while its past romance and chivalry and grand ancestral glories are duly honoured, and all its sins of blood are forgiven, should be stirred again and again by the voice of strangers, as well as of its own citizens, suggesting that it may and ought to have a splendid future, though that be a future neither of monarchs pagan or bigoted, of knights errant, nor of gloomy blood-thirsty inquisitors. C.

OUR WEEKLY GOSSIP.

A translation of M. Guizot's 'Église et Société Chrétiennes en 1861' is announced for immediate appearance by Mr. Bentley. It has been executed by Mr. J. W. Cole, whose ability as a translator was especially manifested in the rendering into English the autobiographical Memoirs of the French Statesman and Philosopher.

Mr. A. Gilchrist is about to publish a 'Life of William Blake,' the painter of mysteries, illustrated with many fac-similes of drawings and sketches by the artist. The biographer of Etty has found a good subject in this work, and one which was much in need of being done, for the sake of justice to a truly great and original artist.

A 'Life of Count Cavour,' by Mr. J. Devey, is announced for publication by Mr. Manwaring. Mr. Devey has been residing at Turin, &c., and has been furnished with new biographical information regarding the career of the late statesman, by Sir James Hudson, Baron Ricasoli, the Marquis de Cavour, and other intimate friends of the late Count. Fra Giacomo, the late Count's confessor, will write the chapter descriptive of the Count's last hours.

A new edition of Crofton Croker's 'Fairy Legends of Ireland' is announced, with antiquarian notes by Mr. Thomas Wright, and a Memoir of the author, by his son, Mr. Dillon Croker.

The manuscript collections of Mr. Dalton, of Dublin, are now offered for sale. They are classed in historical, topographical and genealogical divisions.

The Library and Reading-room which form component parts of the new Museum at Oxford, and which are mainly stocked with scientific books from the Radcliffe, have been opened for public use, under similar arrangements to those of the British Museum Reading-room.

A "National Shakespearian Fund" is now proposed to be established, by Mr. Halliwell, who states that to the purchase of New Place must be added that of the original Great Garden of Shakspeare, formerly attached to New Place, and the site of the present theatre, which also belonged to it. The portion of the Birthplace Estate, still in private hands, must also (he states) be secured to the public. Then there is Anne Hathaway's Cottage, the purchase of which must be accompanied with an endowment for a custodian; and Getley's Copyhold Estate opposite New Place, a property that belonged to Shakspeare, and is mentioned in his Will. To complete the work, Mr. Halliwell proposes that a Library and Museum, properly endowed, should be erected at Stratford; and the records of Shakspeare now scattered about the town of Stratford, with those belonging to the Corporation, placed in those edifices. From 50,000*l.* to 60,000*l.* will be required to accomplish this project. Mr. Halliwell declines to receive contributions of less amount than 5*l.* By adhering to this rule he thinks he will not only be readily able to keep the accounts without assistance, but also be enabled to make his banking-account a general balance-sheet. Subscribers of smaller sums may send their contributions to Local Committees. The Mayor of Birmingham has initiated this part of the work. Mr. Halliwell of course alludes to the necessity of having a strict audit of the accounts; and he further states, for the encouragement of liberally-disposed subscribers, that if any individual

subscribe 10,000*l.*, or upwards, to the Fund, the first of them shall have the option of selecting the design for the buildings to be erected for the Library and Museum, provided that such design belongs to the architecture of the Shakespearian period, and that it can be carried out with the funds in hand at the time it is selected. There are some other details, but the above, perhaps, will suffice for present digestion and reflection.

We may fairly congratulate our readers on the resolution just taken, as we are informed, by the Government, with respect to the British Museum. The entire Natural History Collections will be removed to some other locality, not yet determined on, and the space at the Museum, sufficiently cramped already, will be left to antiquities and literature. This space will, no doubt, be speedily and worthily occupied; and when we say "worthily," as regards literature, we may as well add that we do not mean thereby the acquirement at great cost, and exclusively, of those rare missals and similar volumes, which are only exhibited under glass, or which, at all events, are rarely used by any student or artist. These may be fittingly acquired; but we would suggest, in addition, the purchase of very many old works in English literature which are not to be found in the Catalogue, and to acquire which would demand but a small outlay. There are few libraries richer in ancient illuminated manuscript-books than that of Trinity College, Dublin; but even of the works of such a Dublin worthy as Dean Swift it has but an imperfect collection. This sort of error will be avoided here, we trust, as we acquire new space for what is most wanted. We will only add to the above, the expression of our gratification at finding the *Times* adopting the views we, long since, advocated and that journal opposed, till now, on this measure regarding the Museum.

The King of Portugal has conferred upon R. H. Major, Esq., of the British Museum, the honour of knighthood of the Tower and Sword, in recognition of the value of his literary researches on the early discoveries of Australia, and of the justice therein rendered to the intrepidity of early Portuguese navigators.

It is a long time ago since King Francis stood by the easel of Titian and picked up the painter's fallen pencil; and some years have elapsed since Northcote told his royal visitor, the Duke of Clarence, that if George the Fourth had said to the Duke that he, the King, knew Northcote, it was only His Majesty's "brag." On Monday last, however, we had another instance of prince and painter being together on equal terms. The Grand Duke Constantine, with his Grand Duchess and suite, crossed from Westminster Abbey to the Palace, and there inspected, among other worthy sights, the fresco by Mr. E. M. Ward, R.A., which was described in our last number. The Grand Duke conversed with the artist, examined the picture critically, and had much to say touching the history of the stirring times of which the fresco exhibits one of the most romantic incidents.

The list of bankrupts is beginning to take rank among light periodicals—with occasional sensational paragraphs. The old list was rather monotonous in its stories; but the new contributors give great variety to it. Thus, on the Roll may now be seen "Esquires," causing one to wonder as to what stock in trade was badly managed by those too enterprising gentlemen. "Barristers-at-Law," too, now add dignity to the company, and men of strange vocations afford a pleasant perplexity. What, for instance, is a "Mungo-manufacturer"? Can it be a dealer in slaves? Of "solicitors" there is such a number as may well gratify a large, but ungenerous, public of sufferers. The name would appear to be one which is supposed to carry distinction with it, for one bankrupt in Tuesday night's *Gazette* describes himself as "Solicitor,—for orders in a saw-mill." This last individual is a wag, and may not despair of employment on some of the provincial papers most addicted to jokes.

"A Subscriber" thus replies to Mr. Turner's denial of his statement respecting Doré's Dante.—"After purchasing my copy, I complained to my bookseller that the selling price had been reduced,

and asked him to request Messrs. Hachette & Co. to make some allowance. Their answer to him is as follows:—

“18, King William Street, Strand, 7th Oct. 1861.
 ‘Mr. —.—Dear Sir,—The price of Dante is 100 francs; we have sold it at 5*l.*; but, owing to undersale on the part of others, now reckon it at 4*l.* 3*s.* 4*d.* As there has been complaint, we will credit you 3*s.* Our present charge to trade is 3*l.* 15*s.* Kindly advise us whether you cancel the order [not my order, but a subsequent one] or no.—Yours faithfully, for Hachette & Co., P. N.’
 —The bookseller does not wish his name to appear. I understood from him, subsequently, that Messrs. Hachette & Co. declined to amend their offer before I wrote to you. I refrain from any comments, merely hinting that the agents of Messrs. Hachette & Co. have rather a singular way of transacting their business.”

In 1856 Adolphe Schlagintweit, having left his brothers Herman and Robert to pursue their way over the mountain chains to Eltchi, near Yarkund, pushed onwards, alone, in a north-west direction, on his road to Kokand, but was seized on his way by a robber-chief, and beheaded in front of Kashgar. The journal of this enterprising traveller, containing 135 pages of closely-written notes, has been recovered by Lord William Hay, brother of the Earl of Gifford. Lord William is now employed as Civil Commissioner in Cashmere, and has availed himself of the opportunity to make every inquiry into the fate of poor Schlagintweit. With the journal, which comes down to the 11th of August, 1856, a few days after which the traveller was murdered, Lord William has recovered what, he says in a letter to his brother, the Earl, “is confidently asserted to be the poor fellow’s skull.” The contents of the journal, referring to a “region never visited in modern times,” says Sir Roderick Murchison, “by any other scientific traveller,” will be added, probably, to the work yet in progress, of which the surviving brothers are the authors.

The ‘Colleen Bawn’ was performed for the last time last night, after a run of nearly 300 representations. The Adelphi will be closed this evening, for a rehearsal of the new piece, ‘The Octoroon,’ which is to be produced on Monday. The driest feature in the former drama was the variety of brogues and dialects, or attempts at them, intended to pass for brogues, employed by the actors, and, indeed, actresses, some of whom, at the least, seemed heartily weary of their parts—of which we may say there is not a good one in the piece, save that acted by M. Boucicault himself. Even Mr. David Fisher, who exhibited such rare histrionic talent in the part of the *Abbé*, in ‘The Dead Heart,’ could make nothing of *Hardress Cregan*; but his successor in that character, Mr. Billington, made something of him very unpleasant—a rude and heartless ruffian. Some persons are puzzled at the fact that very poor pieces, from tragedy to burlesque, have very long runs, and that nothing is “damned” now-a-days. One reason for this is, that the audiences are not, as they used to be, almost exclusively London people, who would not have suffered a poor drama to enjoy long life, but mostly successions of visitors to London, who take what they can get, and depart with indifference.

The first meeting of the Geologists’ Association for the present session was held on Monday evening last, and was numerously attended. Thirteen new members were elected. Prof. Morris delivered an interesting lecture ‘On Coal, its Geological and Geographical Position.’

It would be a desirable thing if the cartoon prepared by Mr. Maclise for his picture, ‘The Interview between Wellington and Blücher after Waterloo,’ could be added to the display of works of British Art, which will form part of the International Exhibition next year.

The Authors of ‘Eastbourne as a Resort for Invalids’ have appealed to us in such good spirit, respecting some critical remarks on their joint work, that we willingly afford space for the substance of a remonstrance which they make jointly. With respect to their names and addresses being given, they cite as authorities, or warrants, for

such a course, “Drs. Watson, Budd, Walshe, Lever, Carpenter, Churchill (of Dublin), Todd, Golding Bird, Ferguson, and Messrs. Lawrence and Erasmus Wilson.” With respect to suggested interchanges of recommending patients, the authors allege that they have never even contemplated such a proceeding. The authors add, that as their “reputation has been unjustifiably assailed,” and as they have sustained consequent damage, the statement of their own case, as above made, can alone set them right with the public.

Two volumes of a Diary by Varnhagen von Ense have just left the press; the Diary comprises the years 1835 to the end of 1844, and is likely to create a still greater sensation than Varnhagen’s Correspondence with Humboldt. A few words of Varnhagen, in reply to an observation of the Ambassador, Herr von Bülow, to the effect of the power and importance of a sharp quill in our times (1839), prove what may be expected from these volumes. Varnhagen said, “Indeed, I am sitting by a powder magazine; if I should once feel inclined to put the match to it, half the town of Berlin would explode; I should have to go away and light it from a distance.” He has gone, since, to where no amount of explosion will affect him, but Fräulein Ludmilla Assing has boldly applied the match. We shall see what effect it will produce. History marches quickly in our times, and it may be that things and persons lashed and exposed in the Diary are already removed too far in the background to be of overwhelming interest. Yet, we hear that the revelations of court life and doings in the Diary are of so piquant a nature, and the criticism on powerful and influential people of Berlin high life wielded so unmercifully, that a storm of indignation in certain quarters may be safely predicted, as well as a wide circulation of the book among classes who are fond of racy gossip.

We hear from Florence that the sifting, arranging and copying of Michel Angelo’s manuscripts is nearly completed, and that their publication is near at hand. We speak of those manuscripts left three years ago to the town of Florence by Casino Buonarroti, the Tuscan Minister, in which legacy was comprised the old family house of the Buonarroti, with all the objects of Art it contained, and a sum of money destined to keep a conservator of the Buonarroti Museum. The manuscript collection proved to be far more important and comprehensive than was at first anticipated; and with the help of it, the life of Michel Angelo will have to be written anew. Since July, 1859, the Signor J. C. Casalucci, D. Gaetano Milanesi, director of the State archives, and Carlo Pini, inspector of the Museum, have been engaged in the arrangement, and are preparing for print, a selection of the papers. The number of Michel Angelo’s letters is about 300; but far greater is that of the letters addressed to him, among which are found the names of many of the greatest artists and other celebrities of the time. Of the artists, we may name Bartolommeo Ammannati, Baccio d’Agnolo, Valerio Vicentino, Angelo Bronzino, Giuliano Bugiardini, Baccio da Montelupo, Sebastiano del Piombo, Il Rosso, Andrea and Jacopo Sansovino, Tribolo, Giovanni da Udine, Vasari and Francesco d’Olanda, the Portuguese miniature painter, whose interesting Memoirs on Art and artist life in Rome at the time of Paul III. were published by the Count Athanasius Raczyński, in his book, ‘Les Arts en Portugal.’ Among other celebrities of whom we find letters in the collection, are Francis the First, Cosimo I. de’ Medici, Piero Sederini, Benedetto Varchi, Vittoria Colonna, Catherine of Medici and others. These documents throw light on many an unknown or half-known fact, on many a circumstance which neither Condivi nor Vasari could sufficiently explain; they help us to understand why some of Michel Angelo’s grand projects were not, and some only partly, executed, as the Façade of San Lorenzo, the row of statues for the Chapel of the Piccolomini at Siena, the sepulchre of Julius II., &c.; and they show the great artist also as man and citizen, in the brightest light. Moreover, they allow

us a fair insight into the history of the art and artists of which Michel Angelo formed the centre, and to whom he was the readily-acknowledged and much-honoured oracle. No wonder that the publication of these documents should be eagerly expected. An obstacle to the printing lies in a condition of the testament, according to which neither manuscripts nor sketches were to be made public—a condition which will be submitted to the decision of the magistrates.

EGYPTIAN HALL, PICCADILLY.—Mr. ROBIN, the Celebrated FRENCH WIZARD, will RE-APPEAR in his original SOIRÉES FANTASTIQUES, on the 25th November, with a New Selection of Startling Illusions.

SCIENCE

Sketches of the Natural History of Ceylon; with Narratives and Anecdotes illustrative of the Habits and Instincts of the Mammalia, Birds, Reptiles, Fishes, Insects, &c., including a Monograph of the Elephant, and a Description of the Modes of Capturing and Training it. With Engravings. By Sir J. Emerson Tennent. (Longman & Co.)

THE author and his publishers are careful to premise that this is not a mere reprint of that part of the same author’s well-known work on Ceylon which related to Natural History, but a republication of the same, with the restoration of omitted passages and the introduction of fresh materials collected in Ceylon; “the additional matter occupying a very large portion of the present volume,” and the whole being revised and corrected. As it appears to us, this is the best portion of the preceding and larger work, and a better edition of that best part, in an independent and complete and augmented form. On such grounds we now notice it.

The present publication is a fair example of what may be accomplished in popular Natural History by a painstaking and cultivated gentleman, who, though not himself a professed naturalist, has consulted and availed himself of the assistance of those who are professed naturalists, and has thus given to the public the fruits of his own industry and their aid. A more diligent use, also, of such materials as are already provided by predecessors could not have been made; and personal residence for a time in Ceylon has enabled the author to impart to the whole an individual character, which removes it by many degrees from a simple compilation. Little, indeed, of value in Zoology has been achieved by predecessors as compared with the zoological riches of the country, but what has been done is here methodized, and although only professedly presented as a “*mémoire pour servir*,” will, as the author hopes, “serve to inspire others with a desire to resume and complete the inquiry.”

Every writer who had previously treated of this island assumed that it was a fragment which, in a very remote age, had been torn from the adjacent mainland by some convulsion of nature, and, consequently, that the vegetation which covers, and the race of animals which inhabit it must be identical with those of Hindustan; to which Ceylon was alleged to bear the same relation as Sicily presents to the peninsula of Italy. Sir J. E. Tennent, however, after due consideration, came to the conclusion that, “not only is there an absence of sameness between the formations of the two localities, but that plants and animals, mammals, birds, insects and reptiles, exist in Ceylon which are not to be found in the Flora and Fauna of the Dekkan, but which present a striking affinity and occasionally an actual identity with those of the Malayan countries, and some of the islands of the Eastern Archipelago.” There is a singular local tradition, that at an infinitely

remote period Ceylon formed an integral portion of a vast continent, known in mythical epics of the Brahmans as "Lanka"; and "dim as is this ancient tradition, it is in consistency with the conclusions of modern geology, that at the commencement of the Tertiary period northern Asia and a considerable part of India were, in all probability, covered by the sea, but that south of India land extended eastward and westward, connecting Malacca with Arabia." The author pursues his conception, and shows that a striking dissimilarity presents itself between some of the Mammalia of Ceylon and those of the continent of India, while in its general outline and features this branch of the island Fauna exhibits a general resemblance to that of the mainland. The strongest argument, however, is, that while down to a very recent period it was universally believed that only two species of the elephant, the African and the Asiatic, are now in existence, and that the elephant of Ceylon is identical with that of India, it is now established that the Ceylon elephant is really identical with an entirely distinct species only found in Ceylon and in Sumatra. To the author "the establishment of a fact so conclusively confirmatory of the theory he had ventured to broach is productive of great satisfaction," to which we would minister by renewed publication.

The elephant, as perhaps entitled to do by reason of his bulk, takes up a principal portion of the volume; and in this monograph nearly all that can interest general readers respecting this huge beast is brought together, *minus* most of those old anecdotes of sagacity which have long been fireside property. Errors are corrected, and elephantine anatomy, habits, sagacity, pugnacity and behaviour, both in a state of nature and of captivity, are fully expounded in plain English. No monograph that we have seen is anything like so complete, though a previous popular little volume has, confessedly, contributed to it.

As an object of curiosity, no beast is more interesting; as an object of sport, few are more attractive to athletic sportsmen. It is difficult, however, to bring oneself to sympathize with this sport, when we find that it requires the smallest possible skill in the marksman, and partakes more of the character of butchery than craft. It is often a mere passion for wholesale slaughter, since the carcass is never usefully applied, but is left to decompose; and surely this pursuit cannot be attributed to love of nature and scenery. One officer has killed upwards of 1,400 of these inoffensive monsters; another, more than half that number; and others follow in less numerical triumphs. A London slaughterman would overtop them all by many hundreds, and yet be discarded from decent society. The Government, however, are to blame, in offering a few shillings per head for elephants, and prompting to the destruction of 3,500, in less than three years, in part of the Northern Province alone. Between 1851 and 1856 a similar reward was paid for 2,000 more, in the Southern Province. Poor bulky beast, too easy a mark for any sanguinary novice! Aim at his huge head, and lodge a bullet either in the temple, or in the hollow over the eye, or in a well-known spot immediately above the trunk, or in the region of the ear, and down falls the massive corpse of a sagacious and not malevolent creature, who, as our author believes, lives on terms of amity with every quadruped of the forest; so that it neither regards them as its foes, nor by its acts provokes their hostility. It has only two irreconcilable foes: one is man, and the other a fly!

When an elephant can catch a sportsman,

it shows that, by trunk and by ponderosity, it is able to revenge itself. The trunk catches and flings down, the foot crushes the prostrated assailant. From the peculiar formation of the knee-joint in its hind leg, which enables it to swing the hind feet forward close to the ground, the beast is enabled to toss the captive's body alternately from foot to foot until deprived of life. Perhaps this fact is alluded to in the Third Book of Maccabees, where the author, in describing the persecution of the Jews by Ptolemy Philopater, B.C. 200, states that the king swore vehemently that he would send them into the other world, "foully trampled to death by the knees and feet of elephants."

When free in its native woods the elephant rather displays simplicity than sagacity; but when apprehension and danger call for the exercise of all its powers, it seldom fails to show sagacity enough. It has even been known to feign death in order to regain its freedom, as was related to the author respecting a recent captive.—

"It was led from the corral as usual between two tame ones, and had already proceeded far towards its destination; when, night closing in, and the torches being lighted, it refused to go on, and finally sank to the ground, apparently lifeless. Mr. Cripps ordered the fastenings to be removed from its legs, and when all attempts to raise it had failed, so convinced was he that it was dead, that he ordered the ropes to be taken off and the carcass abandoned. While this was being done he and a gentleman by whom he was accompanied leaned against the body to rest. They had scarcely taken their departure and proceeded a few yards, when, to their astonishment, the elephant rose with the utmost alacrity, and fled towards the jungle, screaming at the top of its voice, its cries being audible long after it had disappeared in the shades of the forest."

It is a curious fact in elephantine domestic economy, that if, by accident, any one becomes hopelessly separated from his own herd, he is not permitted to attach himself to any other. He may browse in the same vicinity, or drink or bathe at the same place, but the intercourse is only on a distant and conventional footing. He has evidently been tabooed by his fellows. The quadrupedal community has discarded him, because he did not sufficiently value the blessing of herding together. The author has seen such an elephant repulsed in every direction, when attempting to take refuge among his former associates, and driven off by heavy blows with their trunks when he attempted to insinuate himself within the circle formed for security, and this, too, even when the whole company were in a state of frightened captivity in a "corral." The result is pretty much the same among these quadrupeds as among us bipeds; the forcibly and hopelessly excluded elephant turns vagabond; and thus is formed a class of solitary elephants, known in India as *goondahs*, and in Ceylon as *hora*, or rogues. So sullen is their disposition that no man ever saw two such rogues in company, although they may be in the same neighbourhood. By night they are marauders, and most mischievous. They destroy plantations, trample down gardens, and lose their fear of man. They actually become hostile to him, and start out as he passes along by roads and jungle-paths, and assail him. The natives have their stories about these rogues, and the following, taken down from the narrator's lips, is worth quotation:—

"In 1847 or '46 I was a superintendent of a cocoa-nut estate belonging to Mr. Armitage, situated about twelve miles from Negombo. A rogue elephant did considerable injury to the estate at that time; and one day, hearing that it was then on the plantation, a Mr. Lindsay, an Englishman, who was proprietor of the adjoining property, and my-

self, accompanied by seven or eight people of the neighbouring village, went out, carrying with us six rifles loaded and primed. We continued to walk along a path which, near one of its turns, had some bushes on one side. We had calculated to come up with the brute where it had been seen half an hour before; but no sooner had one of our men, who was walking foremost, seen the animal at the distance of some fifteen or twenty fathoms, than he exclaimed, 'There! there!' and immediately took to his heels, and we all followed his example. The elephant did not see us until we had run some fifteen or twenty paces from the spot where we turned, when he gave us chase, screaming frightfully as he came on. The Englishman managed to climb a tree, and the rest of my companions did the same; as for myself I could not, although I made one or two superhuman efforts. But there was no time to be lost. The elephant was running at me with his trunk bent down in a curve towards the ground. At this critical moment Mr. Lindsay held out his foot to me, with the help of which and then of the branches of the tree, which were three or four feet above my head, I managed to scramble up to a branch. The elephant came directly to the tree and attempted to force it down, which he could not. He first coiled his trunk round the stem, and pulled it with all his might, but with no effect. He then applied his head to the tree, and pushed it for several minutes, but with no better success. He then trampled with his feet all the projecting roots, moving, as he did so, several times round and round the tree. Lastly, failing in all this, and seeing a pile of timber, which I had lately cut, at a short distance from us, he removed it all (thirty-six pieces) one at a time to the root of the tree, and piled them up in a regular business-like manner; then placing his hind feet on this pile, he raised the fore part of his body, and reached out his trunk, but still he could not touch us, as we were too far above him. The Englishman then fired, and the ball took effect somewhere on the elephant's head, but did not kill him. It made him only the more furious. The next shot, however, levelled him to the ground. I afterwards brought the skull of the animal to Colombo, and it is still to be seen at the house of Mr. Armitage."

Of birds, Ceylon has upwards of 320 species; and their prodigious numbers, particularly the myriads of waterfowl, form one of the marvels of the island. The melody of their song bears no comparison with that of the warblers of Europe; and in beauty of plumage they are surpassed by the birds of South America and Northern India; but they have singular grace of form, and utter clear and musical calls in rich and melodious tones. Of all the Ceylon birds of the same order, the small, glossy crows are the most familiar and notorious. The Dutch, during their sovereignty, enforced severe penalties against any killer of crows, thinking them useful; and they now frequent the towns in companies, and domesticate themselves in the close vicinity of every house. They are the flying thieves of the place; and no article, however unpromising its quality, can with safety be left unguarded in any apartment accessible to them. They despoil ladies' work-baskets, open paper parcels to ascertain their contents, will undo the knot of a napkin if it inclose anything eatable, and have been known to remove a peg which fastened the lid of a basket in order to plunder the provender therein. The following *ruse* seems almost beyond corvine craft:—

"One of these ingenious marauders, after vainly attitudinising in front of a chained watch-dog, that was lazily gnawing a bone, and after fruitlessly endeavouring to divert his attention by dancing before him, with head awry and eye askance, at length flew away for a moment, and returned bringing a companion which perched itself on a branch a few yards in the rear. The crow's grimaces were now actively renewed, but with no better success, till its confederate, poising itself on its wings, descended with the utmost velocity,

striking the dog upon the spine with all the force of its strong beak. The *ruse* was successful; the dog started with surprise and pain, but not quickly enough to seize his assailant, whilst the bone he had been gnawing was snatched away by the first crow the instant his head was turned. Two well-authenticated instances of the recurrence of this device came within my knowledge at Colombo, and attest the sagacity and powers of communication and combination possessed by these astute and courageous birds."

A fine collection, from Ceylon, of stuffed birds, nearly every one of which was shot by Mr. E. L. Layard, is now in England.

The reptiles are lengthily described and illustrated. The most note-worthy topic in this part of the volume is the use of the Pambo-Kaloo, or snake-stone, as a remedy for wounds by venomous serpents. Striking stories are told of its curative powers; and one or two of them appear to be well authenticated, such as those we now cite. A friend of the author's saw a man bitten in 1854 by a cobra de capello, which he had seized by the head and tail:—

"The blood flowed, and intense pain appeared to follow almost immediately; but with all expedition, the friend of the sufferer undid his waistcloth, and took from it two snake-stones, each of the size of a small almond, intensely black and highly polished, though of an extremely light substance. These he applied, one to each wound inflicted by the teeth of the serpent, to which they attached themselves closely; the blood that oozed from the bites being rapidly imbibed by the porous texture of the article applied. The stones adhered tenaciously for three or four minutes, the wounded man's companion in the meanwhile rubbing his arm downwards from the shoulder towards the fingers. At length the snake-stones dropped off of their own accord; the suffering of the man appeared to subside; he twisted his fingers till the joints cracked, and went on his way without concern. Whilst this had been going on, another Indian of the party who had come up took from his bag a small piece of white wood, which resembled a root, and passed it gently near the head of the cobra, which the latter immediately inclined close to the ground; he then lifted the snake without hesitation, and coiled into a circle at the bottom of his basket. The root by which he professed to be enabled to perform this operation with safety, he called the *Naya-thalic Kalanga* (the root of the snake-plant), protected by which he professed his ability to approach any reptile with impunity. In another instance, in 1853, Mr. Lavalliere, then District Judge of Kandy, informed me that he saw a snake-charmer in the jungle, close by the town, search for a cobra de capello, and, after disturbing one in its retreat, the man tried to secure it, but, in the attempt, he was bitten in the thigh till blood trickled from the wound. He instantly applied the Pambo-Kaloo, which adhered closely for about ten minutes, during which time he passed the root which he held in his hand backwards and forwards above the stone, till the latter dropped to the ground. He assured Mr. Lavalliere that all danger was then past. That gentleman obtained from him the snake-stone he had relied on, and saw him repeatedly afterwards in perfect health."

The author adds:—

"The substances used on both these occasions are now in my possession. The roots employed by the several parties are not identical. One appears to be a bit of the stem of an *Aristolochia*; the other is so dried as to render its identification difficult, but it resembles the quadrangular stem of a jungle vine. * * It is probable that the use of any particular plant by the snake-charmers is a pretence, or rather a delusion, the reptile being overpowered by the resolute action of the operator."

Determination and strong will are supposed to effect what is popularly attributed to charms and stupefaction. As to the snake-stones, one was submitted to Prof. Faraday, who believes that it is a piece of charred bone which has been filled with blood, perhaps several times, and then carefully charred again. Probably, thinks

the author, the animal charcoal, when instantaneously applied, may be sufficiently porous and absorbent to extract the venom from the recent wound, together with a portion of the blood, before it has had time to be carried into the system. A communication from Mr. W. H. Hardy, relative to the snake-stone of Mexico, instructs us as to the method of preparing it from a piece of hartshorn, and applying it properly, in which case it adheres firmly for the space of two minutes, when it falls into a basin of water, is dried and applied again to the wound, to which it will not now adhere longer than one minute. When applied a third time, it heals almost immediately, and nothing will cause it to adhere any more.

The ichthyology of Ceylon had been very imperfectly investigated, but a series of drawings, including upwards of 600 species and varieties, all made from recently-captured specimens, has been submitted to Prof. Huxley, who has appended a notice of their general characteristics. "If," says the Professor, "these drawings represent 600 distinct species of fish, they constitute, so far as I know, the largest collection of fish for one locality in existence." Dr. Gray has added a list of the fishes thus represented, and a numerical contrast of them with those of China and Japan, so far as at present known. Amongst the ichthyological curiosities of the island, is the singular phenomenon of the sudden re-appearance of full-grown fishes in places which had been a few days before incrustated with hardened clay. This has been surmised to arise from the release, by rain, of spawn long imbedded in the dried earth. Against this comes the fact, that the rains have no sooner fallen than the capture of the fish commences by the natives, and that the fish are mature and full grown instead of small fry. A more probable explanation is, that certain adult fish in Ceylon, like some that inhabit similar waters both in the new and old world, have been endowed with the singular faculty of providing against periodical droughts either by journeying overland in search of still unexhausted waters, or, in case of its utter exhaustion, by burying themselves in the mud to await the return of the rains.

As respects the freshwater fishes of India and Ceylon, it is now established as a fact that certain of them possess the power of quitting the rivers and returning to them after long migrations on dryland. The fish most frequently seen on these excursions in Ceylon is a perch, about six inches long. Aided by a peculiar apparatus, it issues boldly from its native pools, and begins its toilsome march, either at night or in the early morning, whilst the grass is still damp with dew. Several have been met travelling along a hot and dusty road under the mid-day sun; and some, probably fanciful, accounts have been given of their ability to climb. On the coast of Coromandel a particular species of perch—hence called *Perca scandens*—has been said to ascend trees. That some species can bury themselves is more certain than that others can climb; and in those parts of Ceylon where the country is flat, and small tanks are extremely numerous, the natives are accustomed in the hot season to dig in the mud for fish. On one such occasion a civil officer was present, and saw the men flinging out lumps of moist firm clay with a spade. As this fell to pieces it disclosed fish from nine to twelve inches long, which were full grown and healthy, and, when exposed to the sunlight, jumped on the bank.

On shells, and particularly on the pearl shell (an *avicula*), a chapter of interest follows. Pleasant imaginings are associated with pearls; yet "no scene in Ceylon presents so dreary an aspect as the long sweep of desolate shore to which from time immemorial adventurers have

resorted from the uttermost ends of the earth, in search of the precious pearls for which this gulph is renowned." Here the pearl-diver inserts his foot in the "sinking-stone," and inhales a full breath; presses his nostrils with his left hand; raises his body as high as possible above water, to give force to his descent; and, liberating the stone from his fastenings, sinks rapidly below the surface. As soon as he has reached the bottom the stone is drawn up, and the diver, throwing himself on his face, commences with alacrity to fill his basket with shells. This, on a concerted signal, is hauled rapidly to the surface, the diver assisting his own ascent by springing on the rope as it rises. For a List of Ceylon Shells and a List of Ceylon Insects, with a full chapter about them, the reader must refer to the book itself; a work in which Sir J. E. Tennent has set a highly-commendable example of what diligence and continued observation can effect, even in a merely temporary residence. Let all officials on foreign stations follow this example, and contribute all they can gather to local Natural Histories. The wood-engravings are numerous and good.

MEETINGS FOR THE ENSUING WEEK.

- MOR. Royal Academy, 8.—Anatomy, Mr. Partridge.
 — Geographical, 8.—Upper Yang-tse-kiang Expedition, Lieut.-Col. Sarel; 'Notes on the Caucasus,' Capt. Cameron.
 TUES. Engineers, 8.—'Hooghly and Mutla,' Mr. Longridge.
 — Syro-Egyptian, 7½.
 — Zoological, 9.—'Shrimp from St. Vincent's,' Mr. White; 'New Moths, India and Australia,' Undescribed Lepidoptera; 'Marsh Warbler (*Calamohorpe palustris*),' Mr. Saville.
 WED. Society of Literature, 4½.
 FRI. Philological, 8.

FINE ARTS

FLORENCE EXHIBITION.

Florence, November, 1861.

THE Sculpture department of the Italian Exhibition, though far less extensive than that of Painting, contains a number of works of high merit and interest, and is by a large portion of visitors considered to be the most attractive feature of the whole. It occupies a long suite of rooms, of various sizes, with narrow connecting corridors, parallel with the great body of the building, lighted, like all the other parts of the Fine-Art department, with great judgment and artistic skill.

The first two sculpture rooms, entering from the end nearest to the great doors, contain only the plaster models of works as yet untranslated into marble. Among them Signor Corti's semi-colossal statue of Lucifer takes a distinguished place. It is a truly ambitious work, and is strongly flavoured with that new out-pouring of imaginative power which I referred to in my last as just now exercising so healthful an influence upon modern Italian Art. The proud spirit of the Morning Star is represented just after his fall from heaven, and the awful change from the angel to the demon nature is supposed to be that moment working within him, under the ban of Divine wrath. The very difficult rendering of the mingling of the two natures in the expression of the still beautiful face has been in some degree successful, though the head is somewhat poor and small for the size of the body, and the anguished horror of the wide eyes and painfully stiffened lips does not at all come up "to the height," to use a French phrase, of the terrible ideal, which is probably quite beyond the resources of sculpture. The attitude, however, is good; a sort of pulseless shrinking back and vain attempt at self-avoidance as the satanic nature overcomes the heavenly; as the beautiful glistering angel's wings are starting out into hideous angles and unsightly tufts, and the soft waves of hair lifting themselves ominously from the brow with a dreadful amazement into unsightly flame-like spires. Among the casts there is also a very charming little figure of a hood-winked Cupid feeling his way in the dark with extended hands, executed by Signor Ferdinando Andreini, of Settignano, a boy-artist of only eigh-

teen years old. The appearance of so promising a work as this by a young sculptor from the pretty little village of Bettignano, nestled so temptingly on the spur of the Fiesolan hills, is a pleasant keeping up of the glories of the old time when that same village sent forth more than one great artist to achieve a European fame.

In the next room there is a group, in plaster, about half life-size, which always attracts a circle of admirers, and which is assuredly worthy of praise, although the subject is not one which should come by right within the severe province of sculpture. It is by Signor Rivalta, of Genoa, and represents an episode of the last war: the ambulance of the wounded surprised by a sudden attack. A grievously-wounded soldier lies on the ground, and beside him kneels a sister of charity (a figure of charming sentiment), only half startled from her work of mercy by the onslaught of the enemy; a second soldier lies dead beside his yet suffering comrade, and a rifleman, all fire and energy, stands over the helpless group with levelled musket, striving to defend them from the merciless foe.

Here, too, are several works of Professor Cambi. Among them is the 'Eve and her Children,' which is one of his most graceful designs. The little Abel is veiling his curly head under the abundant tresses of his mother, who, reclining on her side, looks smilingly into his face, and encircles him with her arm; while Cain, crouched beside her knee, doubles his tiny fist, and looks darkly at his brother from under his baby brows, the very embodiment of jealousy and anger. Not far from this model is that of the boy Masaniello, a sturdy, half-naked rogue, grasping a miserable little fish in his fingers, and looking with a malicious grin into its straining eyes.

But it is time to come to some of the finished works which are accounted the gems of the Exhibition. The statue of 'Spring,' by Signor Vela, is of great merit, despite a certain look of shortness in the lower limbs, caused in part by the peculiar and fanciful conceit of making the figure rise out of a pyramidal growth of flowers of all kinds. The blooming deity is only just awakening from her winter sleep, and stretching her round arms indolently above her head, as she lifts her fair form into the soft, warm air, while a thousand blossoms wreath the lovingly upwards from the earth with her. There is much of poetic fancy in the conception of Signor Vela's work, which is about life size, and of peculiarly pure and beautiful marble, well suited to the subject. The 'Menecæus' of Prof. Costoli is a statue of considerable power, which has already found mention beyond the Alps, but there is something to regret in the likeness which the ensemble of attitude and expression bears to the noble antique statue of the Dying Gladiator. Prof. Costoli also exhibits his fine monument to Count della Gherardesca, and a pleasing statue of a boy seated on the ground, and with meddlesome fingers just about to disturb the courtship of two butterflies perched very literally *elle-à-elle* on a tuft of grass beside him.

Signor Sarocchi of Siena, contributes a pretty child-group, called 'The First Prayer.' A chubby boy some three years old kneels with folded hands and dimpled face gravely composed, repeating the holy words which his sister, a pretty little maiden aged some few years more, is dictating as she crouches on one knee beside him. The grouping of the figures is very harmonious; the girl especially, with her anxious and motherly yet pleased expression, is eminently natural and sweet in character.

Our well-established artistic celebrity, Signor Fantacchiotti, has contributed his beautiful 'Monument to Mrs. Spence,' with which a great number of readers of the *Athenæum* are well acquainted. However often seen, the calm recumbent figure with its folded hands and lovely placid features, the baby angels seated on the base of the sarcophagus, and the richly tasteful and carefully wrought pall, and other accessories, never fail to attract admiration. In the same room is also the same sculptor's 'Love reposing on Fidelity,' a child lying asleep upon a noble Newfoundland dog; which is one of his happiest groups.

Prof. Magni sends us from Milan some of the best statues in the Exhibition; one of them indeed may be called the *bonne-bouche* of the whole gathering. This is his 'Leggitrice,' or girl reading, a work as simple in its name as in the pure beauty of its lines, but which, in spite of the accusation brought against it by the exclusive admirers of so-called *scultura dotta*—learned sculpture,—of partaking too much of *genre* to be invested with the majesty of marble, is the first favourite with every class of visitors. The *Leggitrice* is a girl some fourteen years old. Her face, though wonderfully attractive, is not classically perfect by any means, and her delicate form has not expanded, and probably never will expand, into the voluptuous roundness of a Greek Venus. Her limbs are long and slender, though not in the least akin to Donatellesque attenuation. There is calm intelligence in her broad high brow and clear eyes, and a world of tender sentiment in her delicately-cut mouth. She sits in the very lightest garb, a mere linen garment, short-sleeved and unbuttoned at the bosom, sideways, on a rough rush-bottomed chair (for the *Leggitrice* is of the people), on the back rail of which she rests the open book she is reading. Her right hand supports the volume; her left lies carelessly on her knee; her naked feet are negligently curled back under her long garment; her rich hair modestly gathered up; the lines of the folded vest which hangs over the chair-back droop straight and motionless; the Garibaldini medal round her neck lies softly on the delicate curve of her girlish bosom, and she reads, body and spirit,—reads with every pulse of her heart, so earnestly, that a slight dent on the smooth temple shows the strained attention, and the mobile upper-lip is slightly, almost imperceptibly raised at one side in the right-hand curve of its bow, with an expression so thoughtful, and withal so naïve and characteristic, that it must have found its model in a living face. And what is the page which so rivets the attention of the young reader? Looking over her shoulder, one reads no well-worn passage from Tasso; no tragic tirade of Alfieri; not even one of those sweet and tender love-*stornelli* of the Pistoian hills, which flow out so freshly from the popular heart of Italy; but the mighty lines which Niccolini puts into the mouth of his Arnold of Brescia, in the prophetic vision of a future Italy, which comes over him before he goes to meet his martyr's doom at the hands of his priestly torturers.—

I see the Lombard towns join hand in hand;
And from the blood-stained ashes that bestrew
The walls of twenty cities, lo! there streams
One single banner, towering up to Heaven!

I see the German flee beyond the Alps;
His ravaging eagle trailed in mire.... his crown
The mockery of a people new redeemed!

—Another of Prof. Magni's most-admired works is 'The Swing.' A young girl crowned with flowers, swinging herself on a scarf hung between two trunks of trees, while a little *amorino*, cinctured with vine sprays, is helping in the sport. The girl's figure is flowing and graceful, but there is something defective in the drawing of the left arm, which detracts from its effect.

His 'Socrates, in the Theatre,' is also a fine statue, though there is something too much of a theatrical air in the attitude in which he stands, braving the sharp satire of Aristophanes and the laughter of the crowd. 'David, slinging the Stone,' also by Magni, has great merit, both in the well-poised position of the figure and the ardent, noble expression of the boyish face. One of the splendid chimney-pieces in white marble which have attracted so much admiration at the Exhibition, is likewise by Prof. Magni. It is rich and elaborate in design, and the two child figures which sit one on either side, are especially good. A second beautiful chimney-piece is that by Signor Silverio Molinoli, which is festooned and twined with garlands of vines and grape clusters, mixed with arabesques, while playful squirrels peep out and in among the leaves.

Hiram Powers, the well-known American sculptor, exhibits many of the excellent works which are familiar as old friends to the lovers of Art. His 'America,' 'Fisher Boy,' 'Proserpine' Bust, and others, have no need here of particular

description. Mr. Fuller too, contributes his bronze statue of the 'Cast-away,' a shipwrecked sailor lying exhausted on his raft, and just faintly decaying the gleam of a distant ship. This fine statue is the repetition of one which appeared at the London Great Exhibition. Signor Dupré's white-marble pedestal for the great porphyry vase of the Pitti is here, as well as his 'Sappho,' his 'Becco festante,' and several other works. The *bass-relievi* which surround the pedestal are almost all beautiful in design and execution, but the Sappho, although it has met with perhaps exaggerated praise from the artistic world of Florence, is assuredly not an attractive statue owing to something *meagrum* and conventional in the attitude and draping. Signor Dupré's young daughter exhibits an admirable waist-length 'Bust of a Sister,' full of life-like expression and sentiment.

Signor Mazza's 'Bride,' is a great favourite with the public, and is a truly charming figure. The newly-wedded maiden stands wrapped in vague musings, looking down upon and playing with the fateful ring so lately placed on her slender hand, while a half-smile, neither vain nor coquettish, hovers on her lips.

The 'Ishmael' of Signor Saraceni of Milan (the Milanese sculptors are in great force at our Exhibition) is a very remarkable work. Never was the faint exhaustion of a miserable death by thirst more faithfully given. But, clever as it is, the statue is too painful and too crudely truthful to give much satisfaction.—It is difficult to conceive what charms the Art critics find in Signor Salvini's 'Daughter of Sion,' which has, nevertheless, been greatly praised. This semi-colossal statue, with its exaggerated attitude and wildly grimacing features, is a huge example of the defect so often observed in French and so seldom in Italian Art, of caricaturing passion, even to the point of deformity.—A pleasing contrast to this desperate turbaned lady, 'calling up a look,' may be found in Signor Romanelli's delightful statue of 'Young Tell,' pulling the bandage from his eyes, while yet kneeling on the ground, after his father's triumphant shot. This statue, as well as many others in the Exhibition, has been purchased by the King. Prince Carignano and the sons of the King have likewise bought several of the works of Art.

The Sculpture department contains a great variety of beautiful marble vases and tazze; one especially of great size, from Volterra, wrought in the parti-coloured alabaster called 'agate,' which abounds in that district, and adorned with rich clusters of foliage and grapes, while the pedestal is surrounded by excellently modelled sea-horses. There are also a large quantity of alabaster models of *terre cotte*, and some admirable works in ivory, which I must find space to mention in conclusion. A casket richly worked and a tiny picture-frame by Signor Giusti, the unrivalled Siennese artist, are in truth worthy, for delicacy of execution and elaborate beauty of design, to compete with the great cinque-cento ivories of world-wide reputation. The picture-frame has been executed for Lord Northampton. A very beautiful ivory model of the *Fonte Gaia* of Siena, the marble *bass-relievi* of which are the work of Jacopo della Quercia, is also from Signor Giusti's hand, and is the property of Lord Northesk. Near these is some extraordinary rich flower-work in bronze from Rome, a highly ornamented, but rather *baroque* toilet-table, with mirror and all its appurtenances, in Carrara marble, and a pair of finely-carved doors, in walnut wood, executed for the chapel of Prince Demidoff's villa near Florence. TH. T.

FINE-ART GOSSIP.—Mr. C. W. Cope's fresco painting representing "Charles the First erecting his Standard at Nottingham," has been placed in its proper situation, in the Peers' Corridor of the Houses of Parliament, being the fourth of the series of eight subjects intrusted to this artist, which, together with the similar series placed in the hands of Mr. E. M. Ward, for the decoration of the Commons' Corridor, the fourth of which we described last week, is intended to illustrate the great contest which commenced with the meeting of the Long Parliament, and terminated in 1689. Mr. Cope's fresco, which is somewhat larger than that

by Mr. Ward, will be open to the public in a few days.

The Turner pictures which, in accordance with the decision of the Commons' Committee, have been removed from South Kensington to the National Gallery, are now displayed, as rearranged in the first room, at the latter place. The disposition of these works has been made with great success, notwithstanding that they are somewhat crowded together in their temporary location: many of them can be seen to greater advantage than at South Kensington—a result consequent on the spectator being able to stand at a greater distance from them, in the square room, than was practicable in the narrow gallery which recently held them.

Mr. F. M. Brown has completed a reduced version of the fine cartoon which some of our readers may remember to have seen at Westminster Hall many years ago, representing William the Conqueror looking at the body of Harold on the battle-field of Hastings. This is styled, after the victor's own signature, "Wilhelmus Conquestator," and displays, in the growing twilight of the day of fight, the Conqueror, seated on his redoubtable war-horse, leaning forward upon one hand to look at the corpse of his dead enemy, which some Normans have discovered amongst the slain, and now have lifted to be borne away. "Wilhelmus" wears upon his breast that strange necklace of men's bones which he assumed by way of amulet, and as invoking vengeance from their saintly owners upon Harold, who had perjured himself of the oath taken upon such inviolable relics. The wearer is a mighty man, tall, long-limbed, stark and gruesome, and looks like the man he was, as his battle-shaken hair is tossed in rough masses about his uncovered head. Taller than his conqueror, the body of Harold is a weighty burthen, even for the stalwart man who have lifted it up. The long red beard falls upon his breast; the death-pale face shows under the crowned helmet he wears, the great right hand grasps, even in death, the mighty battle-hatchet; although its staff is broken. A gibing Norman, insolent to the vanquished, compares his own puny fist with the giant limb of the king, and, wild with the excitement of victory, laughs out loudly at the sight. Other figures are gathered about a Norman soldier assisting his wounded and aged father across the field strewn with corpses, Norman and English. One of each nation, each desperately wounded, fight their last fight with teeth and bare hands. This design, which was striking and effective in the cartoon from its vigorous conception, and the great power of drawing it displayed, is even more impressive in the oil picture, owing to the pathetic feeling of the colour employed with admirable skill to illustrate the motive of the work as well as the fine technical character of the same quality. By the same artist is 'Our Lady of Good Children,' a Madonna subject, representing the Virgin, seated on a throne, washing the infant Saviour, while an angel holds a basin and towel. In the middle distance is a little St. John, in a bed-gown, with his hair brushed and ready for bed: he is being taught to pray by a second angel. The hour, just after sunset, bedtime for children, is indicated by the red glow and blurred outlines peculiar to twilight, also by the yellow disk of the moon (the childish idea of the countenance therein being accurately made out), just risen over the Sea of Galilee. It will be understood that this is quaintly expressed the motive of 'Our Lady of Good Children,' such a Madonna as their ideas may form, elaborated with great splendour of colour, daringly employed.

A letter must not be overlooked—addressed by Dean Milman to the papers—calling attention to the delay of the works at St. Paul's Cathedral, owing to the want of funds. The Chapter, he reminds the public, has no income disposable for the purpose; and he appeals to lovers of Art to come forward and lend a helping hand to the completion of Wren's masterpiece, by decoration.

Upon Messrs. Thomas Agnew & Sons having dissolved partnership, Messrs. Christie & Manson sold, at Manchester, on the 28th ult. and six following days, a collection of pictures, &c., belonging to the firm. The most interesting and import-

ant lots, and the prices stated to be fetched by them, are as follows, omitting odd shillings:—The set of seven original drawings, by Holloway, from the Cartoons at Hampton Court, made for engraving, 158l.,—Mr. B. Foster, a Halt by the Stile, and Cottages at Hambledon, Surrey, (1861) 132l., (Smith),—the same, Feeding the Bird, 69l., (Page),—Mr. W. Hunt, a Poacher, (1860), a Sprig of Holly, Bunch of Grapes and a Pitcher, an Apple, Grapes and Strawberries, 117l.,—Mr. D. Rbberts, Mosque at Cordova,—The Library at Abbotsford, 99l.,—Mr. P. F. Poole, A Rustic Toilette, 74l.,—D. Coz, Beddgelert, and another, the same subject, 87l.,—Mr. S. Read, Chancel of the Church of St. Paul at Antwerp, 73l.,—Mr. G. Cattermole, The Warning, 94l.,—G. Barrett, A Classical Landscape, with buildings, 236l., (Westcott),—Mr. J. F. Jenkins, The Soldier's Story, 136l.,—Mr. F. W. Topham, The Holy Well, 150l.,—Girtin, Battersea Reach, engraved, 26l. The above-named lots were disposed of on Monday last, which day's sale, consisting exclusively of water-colour drawings, is reported to have realized 4,500l. At the sale of oil pictures on the following day, amongst other lots were: The Royal Dessert, by Mr. G. Lance, 89l.,—Mr. Marcus Stone, The Sword of the Lord and of Gideon, 99l.,—G. R. Leslie, The Watches, 33l.,—Mr. T. Faed, The Valentine, 231l.,—Mr. E. W. Cooke, Venice (1861) (Knowles), 178l.,—Mr. T. Creswick, A Salmon Leap (Stewart), 134l.,—Mr. D. Roberts, Pæstum (Page), 109l.,—F. Danby, The Shipwreck, exhibited at the Royal Academy this year (Platt), 236l.,—Messrs. T. Creswick and F. Goodall, A View in Surrey, (Buckley), 241l.,—Mr. F. Goodall, A Young Gondolier nursing a Boy (Ashton), 174l.,—Mr. Linnell, A Watling Place (Platt), 267l.,—Mr. W. P. Frith, The First Pair of Shoes (Page), 182l.,—Mr. C. W. Cope, King Lear recovering at the Sound of Cordelia's Voice, shown at the Manchester Art-Treasures Exhibition, from the Brunel Collection (Holmes), 302l.,—Sir A. W. Callcott, The Beach at Hastings, Redleaf Collection (Knowles), 152l.,—Mr. T. S. Cooper, A Winter Landscape, with Sheep (1860), (Holmes), 168l.,—Mr. F. Goodall, a Halt at the Well, Brittany (Holmes), 195l.,—Mr. T. Webster, The New Sign (Westcott), 514l.,—Mr. T. Faed, The First-born (Holmes), 145l.,—Mr. W. P. Frith, Bed-time (Page), 115l.,—Mr. F. Goodall, A Beggar-boy at Venice (Grundy), 105l.,—Mr. Linnell, The Wood-cutters (Holmes), 250l.,—the same, Leith Hill, Surrey (Westcott), 368l.,—Mr. P. B. Morris, 125l.,—Mr. E. M. Ward, An Evening at Whitehall, 40 in. by 35 in. (Holmes), 273l.,—Mr. E. L. Egg, Cromwell Praying in his Tent the Night before the Battle of Naseby (Jones), 420l.,—F. Danby, The Dance of the Muses (Mackinlay), 367l.,—Mr. W. P. Frith, The Derby Day, 33 in. by 53 in. (Morley), 525l.,—Mr. T. Creswick, The River Trent (1861), 530l.,—Mr. T. S. Cooper, A Summer Afternoon in Kent (1861), 378l.,—Mr. W. Dyce, George Herbert at Bemerton (1861), (Jones), 745l. Sculpture: Mr. J. Bell, The Babes in the Wood (Jones), 315l. Water-colour Drawings: Mr. W. Hunt, The Village Smithy (Knowles), 94l.,—G. Barrett, Sunset (Knowles), 84l.,—Alexander Fraser, The Village Sign-painter, Northwick Collection (Radcliffe), 148l.,—Mr. W. Gale, Eyes to the Blind (Isaacs), 110l.,—C. R. Leslie, Titania (Holmes), 94l.,—Mr. F. D. Hardy, Father's Pets (Holmes), 162l.,—Mr. R. Redgrave, Lost in the Woods (Radcliffe), 136l. The amount said to have been realized at this sale on Tuesday last is 11,000l.—The names bracketed in the above list are those of the purchasers.

MUSIC AND THE DRAMA

ROYAL ENGLISH OPERA, COVENT GARDEN.—Under the Management of Miss LOUISA FYNE and Mr. W. HARRISON. Great success of ROBIN HOOD. Revival of LURLINE. THE MARRIAGE OF GEORGETTE, every Evening. After which, at Eight o'clock, MONDAY, WEDNESDAY and FRIDAY (in consequence of its enthusiastic reception on Friday last), Macfarren's last grand Opera of ROBIN HOOD, by Messrs. Santley, G. Honey, Patey, C. Lyall, E. Duseck, and Henry Halse; Miss Susan Fyne and Madame Guaraballa.—On TUESDAY, THURSDAY and SATURDAY, at Eight o'clock by desire, Vincent Wallace's Opera of LURLINE, supported by Messrs. Santley, H. Corri, C. Lyall, Patey, and W. Harris; Madames Jessie M'Lean, Thirlwall, and Miss Louisa Fyne.—Conducted by Mr. Alfred Mellon.—The Box-Office open Daily, from Ten till Five. Commence at Seven o'clock.

NEW PUBLICATIONS.

A Night in Fairy-Land: Operetta. Composed by Bennett Gilbert. (Jewell).—This work, first performed, we perceive, at the Surrey Theatre, on the 7th of September, passed away quietly. Yet there are portions of the music fanciful enough to have secured it a place on the stage of a theatre devoted to comic opera, as the French understand the distinction.—Our composers have, for the moment, no help for themselves. To have a chance of success they must try to be grandiose. Hence we meet effort after effort, tragedy after tragedy, larded with ballads for the shops—without any one among them bringing us in the least nearer what every one professes to have so much at heart—the establishment of an English Opera. If the subject be considered in another point of view, the English musicians stand in their own light. They will be something else than English—seduced by the peculiarities of foreign schools or by the success of some model elect. One lays hold of the Verdi phrases—another points his pen at the piquancies of M. Auber—a third puzzles himself and his orchestra with hammering at Meyerbeer effects. Till something more genuine can be dared and done, we shall have no English Opera,—let the most enthusiastic panegyrist say what they please, and (to quote a contemporary who is very warm in the cause) "let expectation stalk abroad, with head ever so erect, and look ever so indicative of hope." To reiterate these truths is an ungracious task—one which it would be pleasant to avoid were criticism free to choose.—Having no book of the words to guide us, we must be content with stating that Mr. Gilbert's operetta seems rather a scene than a story. His principal persons are all fairies, and one only among them has a male voice. There is an overture—a good deal of melo-dramatic and ballet music. Throughout the elfin touch and tone have obviously been kept well in view. But, in choosing a subject with so little contrast, Mr. Gilbert seems to have forgotten how limited are the resources of colour and expression applicable to it. Most of them were exhausted by Weber in his 'Oberon'—by Mendelssohn in his delicate Shakspearian music; and though Signor Costa in his 'Dream Serenade,' and Mr. Benedict in his 'Undine,' have since felicitously lengthened the list of spirit-choruses, it must be felt that to find anything fresh in the region of moonshine and dew is hardly an enterprise for a beginner. Some of Mr. Gilbert's ideas and phrases, however, are partly, if not altogether, new. The overture shows a fair amount of constructive power, modestly exercised (which is no small merit in these days of immodesty). He runs too much on triple rhythms; and, when his aim is brilliancy for the voice, as in the *rondo finale* (why must every opera, great or small, have its *rondo finale*?) he taxes his singers needlessly by a certain uncouthness of passage which does not belong to the true school of vocal writing. On the whole, however, we should be glad to meet Mr. Gilbert again in a story admitting of greater variety, and under circumstances more auspicious than those which have seemingly attended the production of this operetta.

CONCERTS OF THE WEEK.—That performances do not take rank by the ambition with which they are trumpeted *Herr Pauer's* morning music affords a signal illustration. In the least obtrusive form possible, he began, on Wednesday last, a series of half-a-dozen chronological Pianoforte Concerts, which, by those who think as we do, should be frequented, as full of interest and instruction, without adust tediousness. His first comprised—a *Toccata* and "Variations," by Frescobaldi—a Sonata, by Kuhnau, with an expressive *Adagio*,—two movements, by Couperin (one of which 'Sœur Monique,' is as elegantly fresh as if it had been written yesterday),—a *Suite*, by Handel, in F sharp minor,—Sebastian Bach's Concerto in the Italian style,—and a *Fugue*, by Krebs (a man less known), excellent in quality, intricate, and, for its time, enterprising in its modulations,—Mozart's dainty and wayward *Rondo* in a minor,—a *Caprice*, by August Müller (one stage nearer to our period), of

the best quality, effective for the instrument,—Beethoven's better-known Variations in F,—and, to conclude, music by Schubert, M. Henri Herz and Dr. Liszt, not merely interesting if historically considered, but each stamped with its own seal of character, and each, as performed, attesting its player's thorough knowledge of his instrument. We were reminded that the full value of Herr Pauer, as a thinker and a performer, still waits its due justice in London, by this interesting morning-music. If the last finish be sometimes wanting to his playing: his readiness, power and versatility speak for themselves in the above programme—seeing that, as a whole, it was excellently carried out.

DRURY LANE.—On Thursday, a diluted version of M. Legouvé's 'Medea' was produced, for the purpose of introducing in the character, the Australian actress, Miss Avonia Jones. We have before observed that a translation of this feeble kind does not enable an *artiste* to do justice to this arduous part. Miss Jones is not therefore likely to compete with Madame Ristori in its assumption. In all respects, indeed, Miss Jones contrasts with her great predecessor. Her person is not ample, and her voice is not strong; but she compounds for these deficiencies by the carefulness of her action and the general stateliness of attitude that she preserves through the most trying situations. There is throughout no violence of gesture, nor vehemence of declamation, but a steady torrent of eloquence is maintained, with which Creusa and Jason are assailed, but which they most effectually resist. Miss Simms and Mr. Young in these characters remain imperturbable, whatever poor Medea may do or say. These parts were intrusted to very incompetent representatives; and many situations were rendered ridiculous, either by the over-acting or the under-acting of "professionals," who appear to have been engaged only as foils to the principals. The tragedy was preceded by a farce, entitled 'A Terrible Secret,' written by Mr. Stirling Coyne. This little drama is undoubtedly clever, if only as showing what an experienced playwright can do with a mere notion, and no plot or story at all. Yet the audience are kept in a riotous condition of mirth from the opening to the close of the piece. Mr. Atkins, who played the principal character, is an actor new to London, but of great merit. He rattled through an eccentric, and one might almost say ideal, part with irresistible humour and overwhelming rapidity, that never for one moment left the audience at leisure to reflect on the absurdity of the whole affair.

HAYMARKET.—On Saturday, Mr. Booth attempted another part, of a somewhat different character from those he had previously maintained. Sir Bulwer Lytton's 'Richelieu' does not make those demands upon the physical powers, and the elocutionary skill required for the expression of intense sarcasm, which Shakspeare and Massinger enforce upon the actor. Sarcasm there is in 'Richelieu,' but in a mild and mitigated form. Mr. Booth was equal to the delivery of the shrewd verses and half-humorous speeches of the politic Cardinal; and when, towards the end of the play, he was roused to passion, he had ready the requisite store of vehemence destined for the heads of the conspirators. He made-up also for the character exceedingly well, and skilfully simulated premature old age. It should be remarked, that he introduces more of the author's text into the part than is usual with performers, and that with him Richelieu shines as the dramatist as well as the statesman. He thus gives more of the lights and shades of character than ordinary; and these form an agreeable variety. The success of Mr. Booth in this modern drama has raised him much in our estimation, and confirmed us in the opinion that, by adopting a lighter range of parts, he will prove an acceptable actor.

SADLER'S WELLS.—The tragedy of 'Othello' was performed on Saturday, for the purpose of introducing Mr. Conway (who succeeds Mr. H. Marston) as *Iago*. The *débutant* was listened to with attention, and may be regarded as a respectable actor,

with a tendency to appeal, always reprehensible, to the gallery. Mrs. Rodgers, as *Desdemona*, was pleasing in her department, and, as a young actress, promises well. The rest of the play was inefficiently cast, with the exception of the Moor himself, who was sustained by Mr. Phelps with his usual power and more than his usual passion. A new farce, by Mr. Robert Phelps, preceded the tragedy. It is from the French, and entitled, 'Who's my Husband?' This farce is remarkable for its neatness and simplicity. The plot merely consists of the circumstance that two gentlemen, *Sir Harry Goring* and *Sir Geoffrey Morton*, are suitors for the hand of a certain *Lady Alice*, and are invited by *Lady Wentworth* to her country-seat, that her niece may select one of them for her husband. The lady and her lovers—all three are impersonated by female *artistes*—engage in counter-plots, which are rendered lively and amusing by the good acting. The ladies—Miss Murray, Miss Ada Dyas and Miss Hudspeth—merit commendation for the care and spirit of their acting.

MUSICAL AND DRAMATIC GOSSIP.—'Ruy Blas' has been played till last night, without intermission, since its production at the Royal English Opera. The "house bills" describe it as an "immense success"; and thus oblige us to re-state our opinion of its production as a mistake,—in which, we conceive, the future will bear us out.—Mr. Macfarren's 'Robin Hood' was to be revived last night, for the introduction of Madame Guarabell, and with Mr. Haigh to sing the part elsewhere sustained by Mr. Reeves.

Mr. Henry Leslie announces that the concerts of his choir will re-commence on the 2nd of January, 1862; that they are to be five in number; that a Motett by Bach, probably one of Handel's Chandos Anthems, not given in public, it is believed, during the present century; a composition by Dr. Wesley; and some of Mendelssohn's eight-part Psalms, written for the cathedral choir at Berlin,—will be among the principal works performed.—The *Popular Monday Concerts* are advertised to begin, at the *St. James's Hall*, on the 18th; M. Vieuxtemps is to be the leading violinist.—M. Halle the pianist.—The season of regular Saturday music at the Crystal Palace commenced this day week.—To-day, Miss Whitty, Herren Ole Bull and Formes will appear there.

It is said that the Limited Liability English Opera Company is about to open an office for the distribution of prospectuses, and for the issuing of shares to those able and willing to venture.—The rumour that *Her Majesty's Theatre* will re-open next year gains ground.—By both experiments the public may be gainers; and possibly, in one point of view, the artists.—So many representations have been made to us, for months past, and from every side, that, without undue meddling being intended, it is no longer easy to avoid the subject of "treaties." Year by year the struggle seems to become sharper and sharper,—the singers of any value to demand larger and larger terms,—and the managers to press more and more stringently on the time and service of all employed by them.—The latter measure of rejoinder tells with cruel force on the second and third members of the company, who cannot fight for increase of pay, but who are yet subject to any new usage, restricting their services to any given theatre, which may be generally enforced.—Surely, if Art mean anything in the way of improving manners, a little less cupidity on the side of the great singers—a little more consideration for those whose services, howsoever secondary, are still of first consequence to every musical performance aspiring to be complete—would make matters in every respect smoother,—every person's position more agreeable,—and every undertaking more profitable.

The first Concert of the pupils of the Royal Academy of Music was given the other evening, at which Miss Robertine Henderson is said to have distinguished herself.

We are glad to hear that Mr. Rigby, whose tenor voice is worthy of an arena more distinguished than the Alhambra, is about to leave England for

awhile, with the intention of studying on the Continent.

Madame Goldschmidt is now on a concert-tour, and has been singing in 'The Creation' at Liverpool.

A note from Dr. Monk to the York papers—and a circular sent round, after the season of Concerts for 1861-2 had inauspiciously commenced—appraises us, that the Minster Choral Society of that city has been obliged to suspend its public performances owing to want of patronage. Is there something Trophonian in England's Cathedral towns as regards all music,—save it be the Anthem, or the shop-Concert for the "Piccolomini of the minute" as she passes?

Signora Volpini has appeared, in 'Martha,' at the Italian Opera in Paris, with small effect.—Signor Beneventano has thrown up his engagement there.—Signor Delle Sedie seems gaining in favour,—which will surprise no one who recollects his impassioned singing in 'Un Ballo in Maschera,' at the Lyceum Theatre.

Republication of known and old music seems increasing on every side—more slowly, perhaps, in England, than in other countries. The well-known house of Breitkopf & Härtel, at Leipzig, is preparing an entire edition of everything that Beethoven ever wrote, which is to be the model edition, printed, it is announced, from the original editions. This involves a difficulty. Were the original editions, if even they passed under the master's own eye, correct?—Anything but this, we fancy—nay, in some cases, we know.—To whom, then, is the task of sifting and deciding, and using discretion (for to this it must come at last, in some cases) to be committed?—The reprints of other pianoforte music of the last half-century are too numerous to be counted. There are three editions of Clementi's Sonatas—to give merely one instance. Then, those whose tastes are more retrospective still, are beginning to ransack libraries for the music of Philip Emanuel Bach, in which there is much of the modern spirit. Absolutely, too, the harpsichord writers of too-much-despised France, Couperin and Rameau, are beginning to be heard of again. There is a comfort and encouragement in all this, of which we stand in sad need here, especially so often as a pile of the nonsense-music (and worse) of the hour comes before us.

Prince Poniatowski's one-act opera, 'A travers le Mur,' has been produced at the Opéra Comique of Paris with great applause. Censorious people might complain, it is said, that there is in it a good deal of Donizetti, and a strong dash of Paër—but in a Prince's opera, &c. :—Who can wonder, when wash amateur works like this and 'Pierre de Medicis' are forced on the Government Theatres of Paris, by Court influence, that we should hear from the French green-rooms of a "Club of Thrushes"—organized with the express purpose of seeing right done, and bad music put down, in defiance of the hired applauders, who are an important part of every French theatrical establishment?—As regards this matter of false applause, it may be repeated for the thousandth time that artists have almost, if not altogether, the affair in their own hands. So long, however, as some of the best among them are weak and mercenary enough to crouch for the purpose of privately purchasing favour from those who lead opinion,—whether they clap their hands or spoil paper,—they have small right to complain of any injustice or neglect of which they may be the victims.

Letters from Vienna, later in date than the one published here a week or two since, confirm our Correspondent's idea that Herr Wagner's 'Tristan' will probably not be given there, for the simple reason—that it cannot be learnt. This was the cause of the opera being withdrawn from Carlsruhe; and we are in a case to testify that some of the most profound and ready musicians in Europe, after having toiled at the score day after day with hearty good will, profess themselves utterly to have lost all memory of such semblance of idea as may exist there, immediately after their strain at a grasp of the notes had been released.

MISCELLANEA

Dr. Livingstone's Expedition.—The following are extracts from a letter from Dr. Livingstone, dated Mohilla Island, near Comoro, April 4, 1861:—"We went to Rovuma in February, and made an attempt to ascend that river in March. Our progress was arrested when only some 30 miles from the mouth, by observing that the water was falling at the rate of seven inches a day—we had come over some parts not more than five or six feet deep, and our vessel was drawing four and a half feet—so we had to make up our minds whether to proceed further and remain among a people whom we did not know till the next flood, or come back, and work on our old 'spoor' up the Shire.....For the general good we returned, and were favoured by a rise in the river of three or four feet. This last is said to be the last flood of the year, and made us fully alive to the fact that, from one cause or another, we were quite two months too late for successful exploration. From the little that we saw we are disposed to think favourably of the river as an entrance into Eastern Africa. It has a sandy bottom, three-quarters of a mile broad, and partakes much of the character of the Zambesi. Unlike that river, with its abominable bars, it flows into a magnificent bay. And the only danger in its mile-wide mouth, is a sort of 'bore' formed by the water of the river of a few fathoms meeting the ocean tide of nineteen fathoms; at full tide it is all smooth. By keeping near the shore it is quite safe at all periods of the tide. We have a very short delta, and the land rises up from the bank in a gentle slope to three or four hundred feet. It is well wooded, the ebony attaining a much larger size than it does anywhere on the Zambesi. The country is very beautiful, but there is something wrong among the people. Food seemed scarce in a soil where everything could grow. Half-caste Arabs appear to lord it over the general population, and they were inclined to do the same with us. When my brother took the Makololo on shore to cut wood, some of them came and assumed the airs we read of in countries further north. They demanded payment for the wood, and he offered to give it, provided that they should cut it. But no; they would seize that already cut. The Makololo were unarmed, but made a rush to their arms; they would not let their white men be imposed on; the Bastards made a rush the other way, and could scarcely be prevailed on to come back and take up the vegetables they had left behind. But for this little show of pluck we should have had the company of these half-castes at every village, fines levied on every possible pretext, and the word passed on beyond their beat that we were a herd of she-asses to be milked for the public benefit.I have always found that the presence of a trusty band of Makololo, though useless for ship work, was invaluable on land. It was not without regret that we gave up the project of a land journey with them up to Rovuma. It was the worst season for travelling; rain and heavy dews would have cut us up. By the time we reach the Shire we shall be in the healthier season, and a beginning will be made of the general labours from the other end of Nyassa to that which we looked on by the Rovuma. It is curious that all the people declare that Rovuma comes out by Nyassa; this, according to a curious idea that has come over the geographical mind in England, must mean that Nyassa comes out of Rovuma. I wish our friends would only tell us all about it beforehand; it would save us a great deal of trouble, and deliver us from the perplexity of guessing and grumbling. We see, for instance, Shire never discolours in flood, but is always of a dark mossy hue, carries a great deal of mica, has a muddy bottom, and never rises or falls more than a few feet. Rovuma rises some 5 or 6 feet, is very brown and muddy, but has a sandy bottom; water carries little or no mica, and tastes of rain rather than moss."

NEW ILLUSTRATED GIFT-BOOKS,

PUBLISHED BY
GRIFFITH & FARRAN,
CORNER OF ST. PAUL'S CHURCHYARD.

Beautifully printed by Whittingham in Old English Type, with the Borders and Initial Letters in Red. Square 8vo. price 31s. cloth elegant; 27s. 6d. extra; 31s. 6d. Turkey morocco antique.

SPIRITUAL CONCEITS.

Extracted from the Writings of the FATHERS, the OLD ENGLISH POETS, &c.
With One Hundred entirely New Designs, forming Symbolical Illustrations to the Passages,
By W. HARRY ROGERS.

* * The Illustrations unite boldness with elaboration; and are uniformly engraved by SWAIN; while the subject-matter is calculated to direct the attention of the reader to Works, many of which are possibly new to him, but eminently worthy of his acquaintance, if not, indeed, of his affectionate study.

THE WISDOM OF SOLOMON,

FROM THE BOOK OF PROVERBS.

Every page richly illuminated in Gold and Colours from Designs by SAMUEL STANESBY.
Small 4to. price 14s. cloth elegant; 12s. 6d. extra; 31s. morocco antique.

STANESBY'S ILLUMINATED GIFT-BOOKS.

Every Page printed in Gold and Colours.

THE BIRTH-DAY SOUVENIR: a Book of Thoughts on Life and Immortality. Selected from Eminent Writers. Small 4to. price 12s. 6d. cloth elegant; 12s. Turkey morocco antique.

THE BRIDAL SOUVENIR. Containing the choicest Thoughts of the best Authors, in Prose and Verse. New Edition, with a Portrait of the Princess Royal, after Winterhalter. 4to. price 21s. elegantly bound in white and gold. A splendid specimen of decorative art, and well suited for a bridal gift. — *Literary Gazette.*

SHAKESPEARE'S HOUSEHOLD WORDS. A Selection of the Wise-Saws of the Immortal Bard. With a Photographic Portrait taken from the Monument at Stratford-on-Avon. New and Improved Edition. Elegantly bound in cloth, richly gilt, price 2s.; Turkey morocco antique, 14s.

NEW ILLUSTRATED JUVENILE WORKS.

Dedicated, by permission, to
Alfred Tennyson.

THE STORY OF KING ARTHUR and his Knights of the Round Table. Illustrated by G. H. THOMAS. Post 8vo. price 7s. cloth; 2s. coloured, gilt edges.

TRUE BLUE; or, the Life and Adventures of a British Seaman of the Old School. By W. H. G. KINGSTON, Author of 'Peter the Whaler,' &c. Illustrations by GILBERT. Fcap. 8vo. price 5s. cloth; 6s. 6d. gilt edges.

GUY RIVERS; or, a Boy's Struggles in the Great World. By ALFRED ELWES, Author of 'Ralph Seabrooke,' &c. Illustrations by ARKLEY. Fcap. 8vo. price 5s. cloth; 6s. 6d. gilt edges.

Thomas Hood's Daughter.

TINY TADPOLE, and other Tales. By FRANCES FREELING BRODERIP, Daughter of the late Thomas Hood. With Illustrations by her BROTHER. 2s. 6d. cloth; 4s. 6d. coloured, gilt edges.

Captain Marryat's Daughter.

HARRY AT SCHOOL. A Story for Boys. By EMILIA MARRYAT, Author of 'Long Evenings.' With Illustrations by AMOLON. Price 2s. 6d. cloth; 3s. 6d. coloured, gilt edges.

MEADOW LEA; or, the Gipsy Children. A Story founded on Fact. By the Author of 'The Triumph of Steam,' &c. Illustrations by GILBERT. Fcap. 8vo. price 4s. 6d. cloth; 6s. gilt edges.

LIFE TOYS; or, Anecdotes of our Four-Legged and other Pets. By EMMA DAVENPORT. With Illustrations by WILK. Price 2s. 6d. cloth; 3s. 6d. coloured, gilt edges.

DISTANT HOMES; or, the Graham Family in New Zealand. By Mrs. J. E. FYLMER. Illustrations by J. JACKSON. Price 3s. 6d. cloth; 4s. 6d. coloured, gilt edges.

GRIFFITH & FARRAN, the Corner of St. Paul's Churchyard.

WORKS ON MEDICAL SCIENCE.

With 100 Engravings on Wood, 8vo. cloth, 15s.
The DISEASES of the EAR: their Nature,
 Diagnosis and Treatment. By JOSEPH TOYNBEE, F.R.S. F.R.C.S., Aural Surgeon to,
 and Lecturer on Aural Surgery at, St. Mary's Hospital.

With an Iso-Thermal Chart, post 8vo. cloth,
MEDICAL CLIMATOLOGY; or, a Topogra-
 phical and Meteorological Description of the Localities Resorted to in Winter and Summer by
 Invalids of Various Classes, both at Home and Abroad. By R. E. SCORESBY-JACKSON,
 M.D. F.R.S.E. [Next week.]

Fourth Edition, with numerous Additions, 8vo. cloth, 16s.
A PRACTICAL TREATISE on INFLAM-
 MATION and other DISEASES of the UTERUS. By J. HENRY BENNET, M.D., Phy-
 sician-Accoucheur to the Royal Free Hospital.

Second Edition, post 8vo. cloth, 12s. 6d.
On EPILEPSY and EPILEPTIFORM SEI-
 ZURES: their Causes, Pathology and Treatment. By EDWARD H. SIEVEKING, M.D.,
 Physician to St. Mary's Hospital.

8vo. cloth, 8s. 6d.
LECTURES on the GERMS and VESTIGES of
 DISEASE, and on the PREVENTION of the INVASION and FATALITY of DISEASE by
 PERIODICAL EXAMINATIONS. By HORACE DOBELL, M.D., Physician to the Royal
 Infirmary for Diseases of the Chest.

By the same Author, 8vo. cloth, 12s. 6d.
DEMONSTRATIONS of DISEASES in the
 CHEST, and their PHYSICAL DIAGNOSIS. Illustrated by Coloured Plates of all the
 Principal Diseases of the Lungs and Pleura.

With Coloured Plates, 8vo. cloth, 8s.
A PRACTICAL TREATISE on the USE of
 the OPHTHALMOSCOPE. Being the Essay for which the Jacksonian Prize was awarded by
 the Royal College of Surgeons of England. By J. W. HULKE, F.R.C.S., Assistant-Surgeon
 to the Royal London Ophthalmic Hospital, and to King's College Hospital, London.

With Engravings on Wood, 8vo. cloth, 5s.
The PARASITIC AFFECTIONS of the SKIN.
 By T. M'CALL ANDERSON, M.D. F.F.P.S., Physician to the Dispensary for Skin Diseases,
 Glasgow.

Post 8vo. cloth, 10s. 6d.
DIGESTION and its DERANGEMENTS. By
 THOMAS K. CHAMBERS, M.D., Physician to St. Mary's Hospital.

Fourth Edition, fcap. 8vo. 2s. 6d.
ADVICE to a WIFE on the MANAGEMENT
 of HER OWN HEALTH. With an Introductory Chapter, especially addressed to a Young
 Wife. By PYE HENRY CREVASSE, F.R.C.S.

By the same Author, Sixth Edition, fcap. 8vo. 2s. 6d.
ADVICE to a MOTHER on the MANAGE-
 MENT of HER OFFSPRING.

Crown 8vo. cloth, 3s.
On the CLIMATE of WORTHING: its Reme-
 dial Influence in Disease, especially of the Lungs. With Remarks on the Nature and Uses
 of Ozone, with the Influence of Humidity, Barometric Fluctuations, &c. on the Human
 System. By WALTER GOODYER BARKER, M.B. Lond., Medical Officer to the Worthing
 Dispensary.

CHURCHILL'S MANUALS.

Now ready, in two large volumes, 8vo. cloth, price 24s.

A COMPENDIOUS HISTORY OF THE ENGLISH LANGUAGE AND LITERATURE FROM THE NORMAN CONQUEST. WITH NUMEROUS EXAMPLES.

By GEORGE L. CRAIK, LL.D.,
 Professor of History and English Literature, Queen's College, Belfast.

"This augmented effort will be, we doubt not, received with decided approbation by those who are entitled to judge, and studied with much profit by those who want to learn.... If our young readers will give healthy perusal to Dr. Craik's work, they will greatly benefit by the wide and sound views he has placed before them."—*Athenæum*.
 "The present work is well calculated to foster a better taste among readers; and also to supply those who may not have the leisure to study as they deserve the great masters of English literature, with the means of making themselves acquainted with their characteristic excellencies."—*Notes and Queries*.
 "The work will commend itself to all who are desirous of studying the subject as the best, or perhaps we might say the only, philosophical treatise on the Rise and Progress of the English Language."—*Borhulhe*.

Now ready, one large volume, 8vo. price 8s. 6d. cloth,

THE AUTHORS OF ENGLAND: A SERIES OF PORTRAITS OF MODERN LITERARY CHARACTERS. With ILLUSTRATIVE NOTICES by HENRY F. CHORLEY.

NEW EDITION, REVISED.

Now ready, post 8vo. price 6s. handsomely bound,

THE RANK AND TALENT OF THE TIME: BEING A DICTIONARY OF CONTEMPORARY BIOGRAPHY.

CONTAINING ONE THOUSAND MEMOIRS OF EMINENT LIVING INDIVIDUALS.

"We are happy to be able to speak of it in terms of commendation. It is carefully compiled; the notices, as the poet said of the Thames, are, 'without o'erflowing, full.' The type is excellent; and the book is, even with one thousand notices, portable. It is handsome enough in the getting up to deserve a place on the drawing-room table; and simple enough and stout enough to stand worthily among library books of reference which are being constantly handled."
Athenæum.

Now ready, fcap. 8vo. price 5s. cloth antique,

BUTLER'S HUDIBRAS.

EQUITABLE ASSURANCE OFFICE,

NEW BRIDGE-STREET, BLACKFRIARS.

ESTABLISHED 1762.

DIRECTORS.

THE RIGHT HON. LORD TREDEGAR, President.

William Dacres Adams, Esq.
Philip Hardwick, Esq.
William Samuel Jones, Esq.
John Alldin Moore, Esq.
William Frederick Pollock, Esq.

Charles Pott, Esq.
Rev. John Russell, D.D.
James Spicer, Esq.
John Charles Templer, Esq.
Right Hon. Lord Tredegar.

John Charles Burgoyne, Esq.
Lord George Henry Cavendish, M.P.
Frederick Cowper, Esq.
Richard Gosling, Esq.
Peter Martineau, Esq.

THE EQUITABLE is an entirely MUTUAL Office. The reserve, at the last "rest," in December, 1859, exceeded three-fourths of a million sterling, a sum MORE THAN DOUBLES the corresponding fund of any similar Institution.

The Bonuses paid on Claims in the Ten Years ending on the 31st December, 1859, exceeded **Three Millions and a Half**, being more than 100 per Cent. on the amount of all those Claims.The amount added at the close of that decade to the Policies existing on the 1st January, 1860, was **£1,977,000**, and made, with former additions then outstanding, a total of **£4,070,000**, on Assurances originally taken out for **£6,352,000** only.

These additions have increased the Claims allowed and paid under those policies since the 1st January, 1860, to the extent of 150 per Cent.

The Capital at this time consists of

£2,730,000—Stock in the Public Funds.**£3,006,297**—Cash lent on Mortgages of Freehold Estates.**£300,000**—Cash advanced on Railway Debentures.**£83,590**—Cash advanced on security of the Policies of Members of the Society.Producing annually, **£221,482**.The total Income exceeds **£400,000** per Annum.

POLICIES effected in the current year (1861) will participate in the distribution of Profits made in December, 1859, so soon as Six Annual Premiums shall have become due and been paid thereon; and, in the Division of 1869, will be entitled to additions in respect of every Premium paid upon them from the year 1862 to 1869, each inclusive.

On the surrender of Policies, the full value is paid, *without any deduction*; and the Directors will advance *sinecurs* of that value as a temporary accommodation, on the deposit of a Policy.

No extra Premium is charged for service in any Volunteer Corps within the United Kingdom, during peace or war.

A Weekly Court of Directors is held every Wednesday, from 11 to 1 o'clock, to receive Proposals for New Assurances; and a Short Account of the Society may be had on application personally, or by post, from the Office, where attendance is given daily, from Ten to Four o'clock.

ARTHUR MORGAN, Actuary.

AMERICAN SLAVES: THEIR CHRISTMAS WEEK.

Beadle & Co., of London and New York, will publish early in December, in fcap. 8vo. embellished with Engravings by eminent Artists, price 1s. 6d. paper boards; 2s. 6d. extra cloth gilt, a highly interesting and original Novel, entitled

MAUM GUINEA and her PLANTATION CHILDREN: a Romance of Christmas Week among the American Slaves.

By Mrs. METTA V. VICTOR.

All the joy and sorrow, pathos and tragedy, of slave life are daguerrotypied in this delightful volume. It tells the story of the Christmas Holidays as they are enjoyed in the great sugar and cotton plantations of the United States: Barbadoes, Night-Dances, Story-telling, Torch-light Hunting, Courting and Marrying, are all reproduced to the very life; while through the whole runs the thread of a romance of absorbing beauty and power, illustrating the lights and shades of slave experience in an impressive manner.

Beadle & Co. 44, Paternoster-row.

J. H. DALLMEYER (Son-in-Law and Pupil of the late **ANDREW ROSS**) Respectfully begs to inform the Scientific Public that he exclusively manufactures the **ASTRONOMICAL TELESCOPE** according to A. R.'s processes, who has also bequeathed to him the whole of that faculty.

NORTH BRITISH INSURANCE COMPANY.

Head Office—64, Princes-street, Edinburgh. London Office—4, New Bank-buildings, Lothbury. LIFE DEPARTMENT.

Policies opened before 31st December will be entitled at next Distribution of Profits, in 1862, to rank for five years' bonus.

PROGRESS OF BUSINESS.

	Policies.	Sum Assured.
For five years, from 1858 to 1862 inclusive,	307	£376,948
In 1860, the Policies issued	455	377,425
1859	695	446,918
1860	741	475,649

This increase in the business of the Company will, it is expected, beneficially affect the Bonuses to be declared at next Division of Profits.

New and liberal conditions of Assurance have recently been adopted, particulars of which, together with Prospectuses and all necessary information, may be had as above, or will be forwarded. ROBERT STRACHAN, Secretary. 4, New Bank-buildings, October, 1861.

ACCIDENTS OF ALL KINDS, AND FROM ANY CAUSE,

may be provided against by an Annual Payment of 2*l.* to the **RAILWAY PASSENGERS' ASSURANCE COMPANY**, which secures 1,000*l.* at death by Accident, or 6*l.* weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS.

ONE PERSON in every TWELVE insured is injured yearly 75,000*l.* has been already PAID as COMPENSATION.

For further information apply to the Provincial Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 2, Old Broad-street).

ANNUAL INCOME, 40,000*l.*

CAPITAL, ONE MILLION.

WILLIAM J. VIAN, Secretary. 64, Cornhill, E.C., January, 1861.

UNIVERSAL LIFE ASSURANCE SOCIETY.

No. 1, KING WILLIAM-STREET, LONDON, E.C. Committees in Calcutta, Madras and Bombay. Agents throughout India.

The last Annual Reduction of Premium amounted to 45 per cent., so that a person being assured for 1,000*l.* at the age of 30 is now paying 12*l.* 8*s.* 7*d.* instead of 24*l.* 8*s.* 4*d.*

INVESTED CAPITAL UPWARDS OF 750,000*l.*

M. E. IMPEY, Secretary.

METROPOLITAN LIFE ASSURANCE SOCIETY.

No. 2, PRINCES-STREET, BANK, E.C. Established 1838.

Advantages of assuring with this Society:—Economic management, no paid agents, and no commission allowed.

The whole of the profits applied to the reduction of the premiums of members.

The guarantee of an accumulated fund exceeding 925,000*l.*

A gross annual income of 148,000*l.*

Amount paid in claims without a single instance of dispute, 600,000*l.*

Returned to members in reduction of their premiums, 500,000*l.*

HENRY MARSHAL, Actuary.

STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED IN 1835.

Progress of the Company's Business.

The business of the Company has increased steadily year by year, until it has attained its present large amount.

THE STANDARD has transacted a larger amount of business, during the last fifteen years, than any other Office.

From 1845 to 1850 the Amount of Assurances effected was 23,146,641 *l.* 9

From 1850 to 1855 the Amount of Assurances effected was 2,489,968 *l.* 6

From 1855 to 1860 the Amount of Assurances effected was 2,615,453 *l.* 0

Total 27,252,062 *l.* 5

This is all first-class home business. The Assurances being almost entirely, as stated in the Proposals for Assurance, effected in connexion with Family Provisions and Marriage Settlements.

The REVENUE of the Company was in 1845 .. 2108,371 *l.* 5

" " " " 1850 .. 1,169,151 *l.* 4

" " " " 1855 .. 6327,450 *l.* 9

" " " " 1860 .. 2,304,151 *l.* 7

The FUNDS at the date of last investigation (1860) amounted to 21,255,902*l.* 19*s.* 4*d.*, showing an increase of 750,000*l.* since 1855; while during the same period the CLAIMS under Policies in consequence of death were upwards of Half a Million sterling.

SPECIAL NOTICE.

Advantage of Assuring before 15th November, 1861. A Policy effected before 15th November next will not only participate in the 7th Division of Profits to be made in 1865, but will secure one year's additional Bonus at all future Divisions over Policies of later date.

Profits of the Company have been divided on six occasions, in 1835, 1840, 1845, 1850, 1855, and 1860, when large additions were made to Policies under the peculiar mode of Division adopted by the Company, which is essentially Tontine, affording very important advantages to Assurers.

Examples of Bonus Additions.

Date of Policy.	Sums in Policies.	Bonus Additions to 1860.	Sums in Policies, with Bonus Additions.
Nov. 15, 1830	1000	1115 0 0	2115 0 0
" 1835	1000	790 0 0	1790 0 0
" 1840	1000	515 0 0	1515 0 0
" 1845	1000	320 10 0	1320 10 0
" 1850	1000	220 10 0	1220 10 0
" 1855	1000	74 0 0	1074 0 0

Next Division in 1865, and every Five Years afterwards.

WILL THOS. THOMSON, Manager.

H. JONES WILLIAMS, Resident Secretary.

LONDON—82, King William-street, E.C.

EDINBURGH—3, George-street (Head Office).

DUBLIN—60, Upper Backville-street.

The Medical Officer attends at the London Office daily at Half-past One.

THE ECONOMIC LIFE ASSURANCE SOCIETY.

6, NEW BRIDGE-STREET, BLACKFRIARS, LONDON. Established 1833.

Directors.

ROBERT BIDDULPH, Esq., Chairman. WILLIAM ROUTH, Esq., Deputy-Chairman.

Alfred Kingsford Barber, Esq. Sir Alexander Duff Gordon, Bt. Henry Barnett, Esq. Rear-Admiral Robert Gordon. The Right Hon. E. Playdell. Charles Morris, Esq. Bouverie, M.P. George Kettiball Richards, Esq. Edward Harrington, Esq. Augustus Koppel Stephenson, Esq. Pascoe Charles Glyn, Esq.

Actuary—James John Downes, Esq. F.R.A.S. Secretary—Alexander Macdonald, Esq.

The Society offers the following advantages:—The Lowest Rates of Premium on the Mutual System. The Whole of the Profits divided every Fifth Year. Reversionary Bonuses have been added to Policies to the extent of 1,345,000*l.*

The last Bonus, declared in 1859, which averaged 62*l.* per cent. on the Premiums paid, amounted to 475,000*l.*

8471 Policies are now in force, yielding an annual income of 180,000*l.*, assuring the sum of 8,987,572*l.*, which, with 610,537 Bonus additions, makes a total liability of 7,308,399*l.*

The Invested Capital is 1,911,502*l.*, producing upwards of 74,000*l.*,—thus making the present Annual Income of the Society 253,000*l.*

Service in the Militia, Yeomanry or Volunteer Corps will not affect the validity of Policies.

Prospectuses and further particulars may be obtained on application.

GUARDIAN FIRE AND LIFE ASSURANCE COMPANY.

JAMES PHILLIPS & CO., Glass Merchants, 130, BISHOPSGATE-STREET WITHOUT, LONDON.

HARVEY'S SAUCE.—CAUTION.—The admirers of this celebrated Sauce are particularly requested to observe that each bottle bears the well-known label, signed "E. J. LAZENBY & SON." This is guaranteed by perpetual injunction in Chancery of the 9th July, 1858, and without it none can be genuine.

E. LAZENBY & SON, of 6, Edwards-street, Portman-square, London, as sole Proprietors of the receipt for Harvey's Sauce, are compelled to give this caution, from the fact that their labels are closely imitated with a view to deceive purchasers.

Sold by all respectable Grocers, Druggists and Oilmen.

STOVES FOR ENTRANCE HALLS, SCHOOL ROOMS, CHURCHES, &c., all made with fire-brick linings, and entirely free from the objections found to so many of the kind, from their inability to consume overheatings, are dangerous, which, from the timorousness of the officials. These Stoves burn little fuel, may be had with or without open fire, and to burn throughout the cold season, if required, without going out. Illustrated prospectuses forwarded. **FREDRICK EDWARDS & SONS**, 100, GREAT RIVER STREET, W. For 36 years in Poland-street, London, W. Joining.

JUST PUBLISHED,
THE MUSIC FROM HOWARD GLOVER'S NEW OPERA,
R U Y B L A S.

OPINIONS OF THE PRESS.

THE TIMES.—"One of the causes why Mr. Glover's Opera attracts so much, may be traced to an absence of conventionality, which endows the music with a freshness both grateful and pleasing."

DAILY NEWS.—"Its success, indeed, has been triumphant, and such as will give it a permanent place among our standard English operas."

ILLUSTRATED TIMES.—"The melodies in 'Ruy Blas' are strikingly original. Miss Pyne's music is of the first order of excellence."

ILLUSTRATED LONDON NEWS.—"The music is masterly, and rises in power and effect along with the progressive interest of the subject. The melodies have much variety as well as beauty and expression: and even the simplest ballads have some feature which gives them individuality of character."

LORD'S NEWSPAPER.—"The world of music is already raving with delight at the melodious beauties of this first work of a young composer."

The Vocal Music.

A SYMPATHISING HEART (Ballad), sung by Miss Louisa Pyne	2s.
HOLY MOTHER, VIRGIN MILD (Prayer), sung by Miss Louisa Pyne	2s.
WHY THEN FOR SUCH LOVING CARE (Rondo Brilliant), sung by Miss Louisa Pyne	2s. 6d.
HOME OF MY YOUTH (Song), sung by Miss Louisa Pyne	2s.
COULD LIFE'S DARK SCENE (Song), sung by Miss Louisa Pyne	2s.
THE FLOWER SHE LOVES (Romance), sung by Mr. Harrison	2s. 6d.
NEVER ON EARTH WE MEET AGAIN (Ballad), sung by Mr. Harrison	2s.
AMBITION'S EARLY DREAMS HAD FLOWN (Scena), sung by Mr. Harrison	2s. 6d.
MY HEART WITH RAGE IS SWELLING (Scena), sung by Mr. Santley	3s.
WHERE A HUSBAND'S CARE MUST FAIL (Song), sung by Miss Susan Pyne	2s. 6d.
BEAUTEOUS LADY, LIST MY STRAIN, &c. (Romance and Trio)	3s. 6d.
MADAM, IF I HAVE STRIVEN WELL (Duett), sung by Miss Louisa Pyne and Mr. Harrison	3s.

Pianoforte Arrangements.

BRINLEY RICHARDS' Grand Fantasia, introducing the principal Pieces	4s.
BRINLEY RICHARDS—'A Sympathising Heart'	3s.
BERGER—'A Sympathising Heart,' arranged for Pianoforte	3s.

BURCKHARDT—'Ruy Blas Polka'	3s.
BURCKHARDT—'Ruy Blas Galop'	3s.

LONDON: BOOSEY & SONS, HOLLES-STREET.

EVANS'S ENGLISH HARMONIUMS.

These celebrated Harmoniums are made throughout at Messrs. BOOSEY & CHING'S Manufactory, London, and are not only distinguished for their rich and organ-like quality of tone, but are manufactured in that substantial and superior manner peculiar to English-made goods.

EVANS'S ENGLISH HARMONIUMS.

The most celebrated living Musicians, including Balfé, Sterndale Bennett, Cipriani, Potter, Best, Henry Smart, &c., have testified to the extraordinary merits of these Instruments. These Testimonials as well as others from the Clergy and the Press, are attached to the Illustrated Catalogue, just published, comprising Instruments from 8 to 140 Guineas, with One and Two Rows of Keys, the Percussion Action and Pedals.—Gratis, upon application to BOOSEY & CHING, 24, Holles-street, London.

EVANS'S COTTAGE HARMONIUM, AT SIX GUINEAS,

In a French-polished Pine Case, has the full compass, Five Octaves, Double Pedals, and a soft, subdued, agreeable quality of tone, designed, as its name implies, expressly to suit a Cottage or small Sitting-room.

EVANS'S TEN GUINEA HARMONIUM

Is in a handsome French-polished Oak Case, and possesses that rich and organ-like quality of tone so peculiar to all Evans's Harmoniums. Suitable for a School or Chapel.

EVANS'S NINETEEN GUINEA HARMONIUM,

In Oak Case, has Unison Trebles, as well as the Bourdon Stop, which adds an Octave to the Bass. This Instrument is especially adapted for leading Public Worship.

EVANS'S THIRTY-SIX GUINEA HARMONIUM,

With Twelve Stops, is the most effective Instrument made with a Single Row of Keys (excepting the Drawing-Room Model, at 55 Guineas). Brilliance, sweetness and great power are combined in this Instrument. Suitable either for a Drawing-Room or a good-sized Church.

EVANS'S NEW PATENT ENGLISH HARMONIUM,

With Two Rows of Keys and Five and a Half Octaves of Vibrators. Price 68 Guineas, in a very handsome Rosewood Case. The most perfect Instrument without Pedals yet offered to the public. Many of the Testimonials from the Profession and Press refer particularly to this most effective and beautiful Instrument.

EVANS'S PEDAL HARMONIUM,

Price 47 Guineas, in a handsome solid American Walnut Case; has Nine Stops. The Pedals have a compass of Two Octaves and a Third, and contain Diapason and Bourdon, independent Reeds.

EVANS'S NEW PATENT ENGLISH MODEL HARMONIUM,

With Two Rows of Keys and Pedals, price 120 Guineas, is the most complete Harmonium ever constructed, possessing all the attributes of an Organ. To give an account of the capabilities of this Instrument in an Advertisement would be impossible.

BOOSEY & CHING, HARMONIUM MANUFACTURERS, 24, HOLLES-STREET, LONDON.

The Factories are at Davies-street and Wells-street, Oxford-street.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1777.

LONDON, SATURDAY, NOVEMBER 16, 1861.

PRICE
THREEPENCE
Stamped Edition, 4d.

NOTICE.

The price of THE ATHENÆUM from October 5 is THREEPENCE.

Thirty years ago, when THE ATHENÆUM came into the hands of its present Proprietors, its price was Eightpence, and its contents, with advertisements, forty-eight columns. Convinced that the circulation of Literary Journals was restricted by high price, and that every advantage offered to the public would bring increase of circulation and authority, the Proprietors reduced the price one-half—to Fourpence. The experiment succeeded, and cheap Literary Journals became the rule.

The Proprietors have always held to the principle then proved. They have given to the public the benefit of every change in the law, increasing the size of the paper without increase of price, until the average has become double its former size—above ninety-six columns.

The Proprietors, taking advantage of the abolition of the Paper Duty, therefore resolved that the price of THE ATHENÆUM should be reduced to THREEPENCE.

UNIVERSITY OF LONDON.—NOTICE IS HEREBY GIVEN, that the NEXT HALF-YEARLY EXAMINATION for MATRICULATION in this University will commence on MONDAY, the 14th of January, 1862.

Every Candidate is required to transmit his Certificate of Age to the Registrar (Burlington House, London, W.) at least fourteen days before the commencement of the Examination.

WILLIAM B. CARPENTER, M.D., Registrar.
November 7th, 1861.

UNIVERSITY COLLEGE, LONDON.—The PROFESSORSHIP of PATHOLOGICAL ANATOMY is NOW VACANT, in consequence of the Resignation of Dr. Jenner. Candidates for the appointment are requested to send their applications and testimonials to the Council of the College, on or before Wednesday, the 1st of January, 1862.

CHAS. C. ATKINSON, Secretary to the Council.
November 4, 1861.

UNIVERSITY OF DUBLIN.—DONNELLAN LECTURE.

Applications from Candidates for the Office of Donnellan Lecturer for 1862 should be sent to the Registrar of the University on or before the 27th of NOVEMBER.

Each Candidate is required to send in with his application a statement of the subject on which he proposes to lecture. All Clergymen of the United Church of England and Ireland who are Masters of Arts of the University of Dublin are eligible.

By order, JAMES H. TODD, Registrar.

ROYAL INSTITUTION OF GREAT BRITAIN,

ALBEMARLE-STREET, LONDON, W.

November, 1861.

EGYPTIAN DESERT SANITARIUM, for the TREATMENT of PULMONARY and OTHER INVALIDS.

This Establishment, beautifully situated in the Desert, near Cairo, surrounded by Grounds and Gardens for Exercise, intended to supply a want long felt by Invalids visiting Egypt, where they may, with the great advantage generally derived from the pure air of the Desert, have regular Medical Attendance, combined with domestic comfort.

The domestic arrangements are conducted by the Matron, Mrs. MURRAY, under the medical and superintending guidance of Dr. PATTERSON, the resident English Physician of Cairo. A limited number only can be admitted this season.—Terms: 30 Guineas per Month.

TURKISH BATHS, BROMPTON.—Admired public Turkish-bath.—Public and Private, for Ladies and Gentlemen, OPEN DAILY from 7 A.M. to 8 P.M. This Establishment is the largest, most elegant and best ventilated of any yet erected. It is under the immediate superintendence of the Proprietors—Medical men. Cards sent on application.

HYDROPATHY.—WINTER TERMS.—The BEULAH-SPA HYDROPATHIC ESTABLISHMENT, Upper Norwood, within twenty minutes' walk of the Crystal Palace, is open for the reception of Patients and Visitors. Terms:—Patients, from 3 guineas; Visitors, from 2 guineas, according to accommodation.—Particulars of Dr. RUTTERBANDT, M.D., the Resident Physician.

HYDROPATHIC SANATORIUM.—SUD-BROOK PARK, Richmond Hill, Surrey.—Physician, Dr. E. W. LANE, M.A., M.D. Edin.

The TURKISH BATH on the premises, under Dr. Lane's Medical direction.

PICTURES.—MR. FLATOU'S LAST EXHIBITION of HIGH-CLASS MODERN PICTURES, at Messrs. HAYWARD & LEGGATT'S GALLERY, 5, COVENT-GARDEN. MR. FLATOU begs to announce that he HAS OPENED the above GALLERY with his choice Collection prior to his retiring from picture-dealing, as in future he intends devoting his entire attention to the Exhibition and Publication of the forthcoming important work by W. P. Frith, R.A., The Railway Station. The Collection includes some of the choicest specimens by the most distinguished Members of the Royal Academy and other Eminent Artists. Admission Free on presentation of private address card.

* * Catalogues of the whole Sale forwarded on receipt of Six Stamps.

THE RE-ISSUE OF PUNCH.

THE DOUBLE VOLUME FOR 1845 (Vols. 8 and 9), Price 10s. 6d. in cloth, gilt edges, also the NINTH VOLUME, price 5s. boards, were both published on the 30th ult.

The following are already published:—

Vol. 1 (for 1841) 6s. Vol. 4 and 5 (1843) 10s. 6d.
Vols. 2 and 3 (1842) 10s. 6d. Vol. 6 and 7 (1844) 10s. 6d.

* * Any Volume or Double Volume may always be had separately.

Second Edition of 'The Silver Cord.'

This day is published, in 3 vols. post 8vo. price 31s. 6d.

THE SILVER CORD.

By SHIRLEY BROOKS,
Author of 'The Gordian Knot,' 'Aspen Court,' &c.
Second Edition.

"If to create excitement from the first chapter to the last be the great object in writing a novel, Mr. Shirley Brooks has achieved a most remarkable success,—for a more exciting story than 'The Silver Cord' was, perhaps, never written."—*Examiner*.

"It is not too much to say that in 'The Silver Cord' Mr. Brooks has produced, under the humble and title of 'a story,' one of the most consistent and highly-elaborated novels which have issued from the press for many years."—*Morning Post*, Oct. 10.

In 1 large vol. crown 8vo. price 9s.

HEALTH, HUSBANDRY, AND HANDICRAFT.

By HARRIET MARTINEAU.

"The work throughout is practical in its character, abounds with good and useful advice, and is the result of the inquiries of a thoughtful, intelligent and close observer."—*Observer*.

"The studies also upon various trades and professions contain much that is curious; and masters and mistresses, children and servants, mechanics and labourers, daily governesses and fine young ladies, may all learn something about themselves and their neighbours with which they were previously unacquainted."—*Saturday Review*.

The New Education Minute.

Price 3s. 6d. boards.

POPULAR EDUCATION IN ENGLAND.

Being an Abstract of the Report of the Royal Commissioners on Education. With an Introduction and Summary Tables.

By HERBERT S. SKEATS.

"Mr. H. S. Skeats's 'Abstract of the Report of the Royal Commissioners' is at once comprehensive, concise and clear. All the really important points, either as to matters of fact or of suggestion, are compressed into the compass of one small volume. Yet the arrangement is so good that there is no consequent confusion or obscurity; while the outline of what has been done, is doing, or is proposed to be done for the formation of a sound and widespread education among the people, is simple, brief and intelligible, without being bald and uninteresting from its brevity. It is a useful work well done."—*Economist*.

In 4 vols. royal 8vo. price 8l. 8s.

BRITISH SEA-WEEDS NATURE-PRINTED.

Containing 70 Coloured Nature-Prints, with Engraved magnified Dissections of the whole Species described in the Volume.

Nature-Printed by HENRY BRADBURY.

The Descriptions by WILLIAM G. JOHNSTONE and ALEXANDER CROALL.

The 'Nature-Printed British Sea-Weeds' forms Four handsome Volumes, in royal 8vo. consisting of 210 Plates, with the necessary Letter-press. Either Volume may be had separately. The price of each is 2l. 2s.

"Mr. Henry Bradbury's 'Nature-Printed British Sea-Weeds' is now completed by the appearance of the fourth volume. The authors have added sketches of the history of British Sea-Weeds, of their geographical distribution, of their structure, and of their uses. The whole work now forms four volumes unsurpassed for beauty even in the rich field of Natural History."—*Gardeners' Chronicle*.

In 2 vols. royal 8vo. price 4l. 4s.

BRITISH FERNS NATURE-PRINTED.

Nature-Printed by HENRY BRADBURY.

The Descriptions by THOMAS MOORE, F.L.S.

The work contains 122 Plates and 500 Pages of Letter-press, and is completed in Two Volumes, royal 8vo., uniform with the 'Nature-Printed British Sea-Weeds.' Either Volume may be had separately. The price of each is 2l. 2s.

"The process by which it is produced is that delightful one which has been a labour of love to Mr. Henry Bradbury in bringing to perfection, and which was first applied to the ferns. To speak of the accuracy of the plates is of course a misnomer. They are of the nature of photographs: and the only possible drawback to the work is, that its extreme beauty will banish to the drawing-room table, as a mere example of pretty drawing, what, as a scientific manual, has not been equalled."—*Saturday Review*.

BRADBURY & EVANS, 11, Bouverie-street,
Fleet-street, E.C.

On Friday next, in 8vo. price 7s. 6d. cloth,
A DEFENCE OF THE FAITH, PART I. FORMS OF UNBELIEF. By SANDERSON ROBINS, M.A. Vicar of St. Peter's in the Isle of Thanet, and Rural Dean.
* * Part II. on CHRISTIAN EVIDENCES, and PART III. on HOLY SCRIPTURE, are in preparation.
London: Longman, Green, and Co. Paternoster-row.

Now ready, in post 8vo. with 2 Illustrations, price 7s. 6d.
WILD DAYRELL: a Biography of a Gentleman Exile. By JOHN KEMP, Esq., Author of 'Sketches in the South of France,' &c.
"A clever dashing novel of life."—*Globe*.

NEW FRENCH READING-BOOK FOR ENGLISH SCHOOLS.

Just published, in 12mo. price 4s. 6d. cloth,
LECTURES FRANÇAISES; or, Extracts in Prose from Modern French Authors. With copious Notes for the use of English Students. By L'ONCE STEVENARD, Principal French Master in the City of London School; Second French Master in St. Paul's School; and Lecturer on the French Language and Literature in King's College.
London: Longman, Green, Longman, and Roberts.

Just published, in 12mo. price 3s. cloth,
THE PRONOUNCING READING-BOOK for CHILDREN from Five to Ten Years of Age, on a New Plan, lessening the Difficulties of Learning to Read, and imparting a Correct Pronunciation. With an Introduction to the Art of Reading. By W. L. ROBINSON.

Mr. WILKESPIN, Founder of the Infant School System, says in a letter to the Author:—"Your 'Pronouncing Reading-Book' is well suited to enable a child to read with greater facility than any plan I have seen." It supplies a long-felt public want, and I can confidently recommend it to all engaged in tuition. Several of my grandchildren being taught on your system, enables me to speak practically as to its results."
London: Longman, Green, and Co. Paternoster-row.

HINDUSTANI BOOKS IN ENGLISH ROMAN TYPE.

Now ready, in 12mo. price 7s. cloth,
GLOSSARY, HINDUSTANI AND ENGLISH, to the New Testament and Psalms. By COTTON MATHER, late Assistant Professor of Hindustani, at Addiscombe College.

By the use of this work and a copy of the Psalms and Testament, a tyro acquainted with only the elementary principles of the language would have no difficulty in acquiring a thorough knowledge of the lingua franca of India in its most common and colloquial form.

Monier Williams's Hindustani Primer, price 1s. 8d.

Williams and Mather's Introduction to Hindustani, 2s. 6d.

Monier Williams's Bagh-o-Bahar, price 5s.

London: Longman, Green, Longman, and Roberts.

LIDDELL AND SCOTT'S TWO GREEK LEXICONS.

Now ready, in crown 4to. price 31s. 6d. cloth,
A GREEK-ENGLISH LEXICON, compiled by HENRY GEORGE LIDDELL, D.D., Dean of Christ Church; and ROBERT SCOTT, D.D., Master of Balliol College. Fifth Edition, revised and augmented.

This Fifth Edition has been materially contained in Roast and thoroughly revised and corrected; and very large additions have been made to it, from the Palm's Greek-German Lexicon, and other works.

Also, the Ninth Edition, in square 12mo. price 7s. 6d. cloth,
A LEXICON, Greek and English, abridged from Liddell and Scott's 'Greek-English Lexicon.'

Oxford: at the University Press.

London: Longman, Green, Longman, and Roberts; and J. H. and J. Parker, London and Oxford.

ONE HUNDRED LECTURES, by B. C. JONES, on the POETS and DRAMA, ANCIENT and MODERN; also on ELOCUTION, ORATORY, PHILOSOPHY, &c., in Shilling Parts.
Lacy, 88, Strand; and Simpkin & Marshall.

NIGHT SCHOOLS.

Just published, Third Edition, fcap. 8vo. cloth, with Frontispiece, price 3s. 6d.

PLOUGHING and SOWING; or, Annals of an Evening School in a Yorkshire Village, and of Work that Grew Out of It. From Letters and Private Notes.

By a CLERGYMAN'S DAUGHTER.
Edited by the Rev. F. DIGBY LEGARD, late Scholar of University College, Oxford.

London: J. & C. Mosley, 6, Paternoster-row.

NEW TALE BY THE AUTHOR OF 'THE HEIR OF REDOLYFFE.'

Just published, royal 18mo. cloth, with Frontispiece by J. B., price 3s. 6d.

FRIARSWOOD POST-OFFICE.

London: J. & C. Mosley, 6, Paternoster-row.

Now ready, 420 pages, 3s. 6d., Seventh Edition,
THE HISTORY OF ENGLISH LITERATURE, with an OUTLINE OF THE ORIGIN AND GROWTH OF THE ENGLISH LANGUAGE. Illustrated by EXTRACTS. For Schools and Private Students. By WILLIAM SPALDING, Professor of Logic, Rhetoric and Metaphysics in the University of St. Andrews.

"A compilation and text-book of a very superior kind. Mr. Spalding has brought to his survey not only a knowledge of our history and literature, but original reflection, a comprehensive mind, and an elevation of tone, which impart interest to his account, as well as soundness to his decision. The volume is the best introduction to the subject we have met with."—*Spectator*.

"Mr. Spalding's critical remarks are discriminating, impartial, judicious and always well put."—*Athenæum*.
Edinburgh: Oliver & Boyd. London: Simpkin, Marshall & Co.

A & C. BLACK'S NEW WORKS.

The Fathers of Greek Philosophy.

Illustrated with 100 large Woodcuts and a Portrait of Scott. 5 vols. royal 8vo. cloth, gilt back, price 3l. 2s.

Edinburgh: ADAM & CHARLES BLACK.

COMPLETION OF THE ENGLISH CYCLOPÆDIA.

CONDUCTED BY
CHARLES KNIGHT.

The ENGLISH CYCLOPÆDIA is published in
FOUR DIVISIONS, each Division being complete in
itself, and sold as a separate work.

THE CYCLOPÆDIA OF GEOGRAPHY.

THE CYCLOPÆDIA OF BIOGRAPHY.

THE CYCLOPÆDIA OF NATURAL HISTORY.

THE CYCLOPÆDIA OF ARTS AND SCIENCES.

Each Division of the English Cyclopædia
is sold as a separate Work.

GEOGRAPHY,	4 Vols.	£2 2 0
or 2 Vols. half morocco,		2l. 10s.
BIOGRAPHY,	6 Vols.	3 0 0
or 3 Vols. half morocco,		3l. 12s.
NATURAL HISTORY,	4 Vols.	2 2 0
or 2 Vols. half morocco,		2l. 10s.
ARTS AND SCIENCES,	8 Vols.	4 16 0
or 4 Vols. half morocco,		5l. 12s.

* * For List of Writers, and full details, see Prospectus,
which may be had from the Publishers, or through any
Bookseller.

From the *TIMES*, Oct. 4, 1861.

"As regards the contents of this Cyclopædia, it is however,
impossible to give any sufficient impression of an aggregate which
includes somewhere or other all the information generally required
upon every conceivable topic. A good Encyclopædia, as every
one knows, is a compendious library, and though students may
require further information upon some points than its summaries
contain, even students will be surprised in this instance to find
the materials at their disposal when they once adopt the habit of
resorting to its pages. For all practical purposes a large propor-
tion of the articles may be said to be exhaustive; they are accu-
rate to a degree which will strike even those who know what pains
have been taken to render them so; and, as they are concise as
well as full, every column being rammed like a sky-rocket, the
owner has a reservoir out of all proportion to the library shelves it
will occupy."

From the *EXAMINER*, Oct. 19.

"Mr. Knight completed a few weeks ago the two-and-twenty
volumes of that excellent English Cyclopædia, into which the
'Penny Cyclopædia' has now been recast. The revised issue was
planned in four divisions. Each is a complete work, having
distinct claims on a large special class of readers, while the four
together now constitute a general Cyclopædia singularly accurate
and full, of which the two-and-twenty volumes—eight given to
Arts and Sciences, six to Biography, four to Geography, and four
to Natural History—cost only twelve pounds. Now that its
reprints may be on untaxed paper, this admirable work and others
that preceded or are concurrent with it will, we trust, bring their
late worldly reward to one who, having been for forty years a most
unwearied labourer for the instruction of the public, toils yet
with the determined vigour of youth when his years are three-
score and ten."

BRADBURY & EVANS, 11, Bouverie-street, Fleet-
street, E.C.

TINSLEY BROTHERS' LIST OF NEW WORKS.

Now ready, price 5s.

DUTCH PICTURES:

WITH SOME SKETCHES in the FLEMISH MANNER.

By GEORGE AUGUSTUS SALA,

Author of 'William Hogarth,' 'Seven Sons of Mammon,'
'Twice Round the Clock,' &c.

OPINIONS OF THE PRESS.

"There is a genuine air of homespun earnestness about such a picture as the following, which, though it might have been written by Dickens, has more in it of Mr. Sala's personal bias."—*Spectator*.

"Mr. Sala is a masterly inventor of strange incident and delineator of strange character: herein there is no man living who has shown anything like similar power."—*Press*.

"The title of the volume indicates well enough the style in which it is written, but gives no idea of the endless variety of subjects over which it ranges. All classes in society, except the highest, all conditions and phases of life, all possible and many imaginary combinations of circumstances, are here photographed with admirable skill."—*Daily News*.

"Household Words" had, as 'All the Year Round' has, many a picturesque contributor; but the former never had, and the latter has not now, a more picturesque writer than Mr. G. A. Sala."—*Critic*.

"They give a just idea of Mr. Sala's versatility of talent, for they are as various as they are amusing, and will cheer many a half-hour in the intervals of business."—*Globe*.

"Every page is enlivened by some quaint fancy or some shrewd comment on men or things, and beneath the tritest observations there not unfrequently lurks a deep philosophic meaning."—*Literary Gazette*.

"The book itself, independently of its racy contents, is also a perfect specimen of typography, the quaint appearance of which adds greatly to its value, whilst it further testifies to the liberality of the publishers, who have achieved the commendable result of giving for the small price of five shillings a combination of qualities of the very highest order in every particular."—*Bell's Messenger*.

"Mr. Sala's style of writing proceeds precisely according to the Dutch style of painting, though he is not limited to one method of handling, and can be as terrific on paper as Salvator Rosa on canvas. ... In the particular kind of literary production by which he is most widely and popularly known, he has done nothing better than the present volume. ... The contents of the volume vary in merit, but, unlike the generality of such collections, it contains nothing which had been better omitted; and though all classes of readers may gratify all kinds of tastes in its perusal—the gay, the sensible, the philosophic, the sentimental and the grave—there is not a heavy page to be found in 'Dutch Pictures'."—*Morning Post*.

In 3 vols.

London: Ward & Lock, 158, Fleet-street.

This day, Vol. III. price 5s. 6d.; also Binding Cases, 1s.

TEMPLE BAR:

A LONDON MAGAZINE for TOWN and COUNTRY
READERS.

Edited by G. A. SALA.

London: Ward & Lock, 158, Fleet-street.

On the 1st and 15th of every Month, in fcap. 8vo. paper covers,
in the French Style of Binding,

THE SHILLING VOLUME LIBRARY.

The CHANCELLOR of the EXCHEQUER, when proposing the Repeal of the Paper Duty, used as an argument for its removal the superiority, both in paper and print, of French popular literature over the same class of works produced in England; and he attributed the reason of this difference to the fact that paper was untaxed in France, while it was taxed in England. Happily this distinction no longer exists. On the 1st October paper became free of Taxation. Therefore the

SHILLING VOLUME LIBRARY

is projected with the view of giving to the reading public the full benefit of the abolition of the Paper Duty. Each book in the

SHILLING VOLUME LIBRARY

will present to the buyer the utmost possible value both in quantity and quality.

The greatest care will be taken, so as to render the

SHILLING VOLUME LIBRARY

in all respects unexceptionable reading both for the young as well as for the old.

The following were ready November 15:—

1. FAMILY CREDIT. By WESTLAND MARSTON.
2. WHICH WINS—LOVE OR MONEY? By the Author of 'WHITEFRIARS.'
3. RECOLLECTIONS of a RELIEVING OFFICER. By E. P. ROWSELL.
4. LADY LISLE. By M. E. BRADDON.

On December 1,

5. THE ROUND of WRONG. By EDMOND ABOUT. Translated by LASCELLES WRAXALL.
6. MEMOIRS of a LADY-IN-WAITING.

London: Ward & Lock, 158, Fleet-street.

WORKS BY WATTS PHILLIPS.

On December 1, fcap. 8vo. ornamental boards, price 2s.

AMOS CLARK; or, the Poor Dependent. A Story of Country Life in the Seventeenth Century. By WATTS PHILLIPS, Author of 'The Dead Heart,' &c.

CANARY BIRD: a Story of Town Life in the Seventeenth Century. (Sequel to 'Amos Clark.')

London: Ward & Lock, 158, Fleet-street.

A. W. BENNETT'S NEW PUBLICATIONS.

Crown 8vo. cloth, with Twenty Illustrations, price 10s. 6d.

WILL ADAMS, the FIRST ENGLISHMAN in JAPAN. A Romantic Biography. By WM. DALTON.

"We have no hesitation in recommending 'Will Adams' to any one who is interested either in Japan or in the history of the Christian religion."—*Saturday Review*.

"The book is exceedingly interesting. All that relates to Japan is as good as the best fairy tale."—*Spectator*.

"Possesses all the fascination of a romance, while it is richly deserving of a careful perusal on the ground of the bond *Admiral* information it so pleasantly conveys."—*Morning Star*.

Crown 8vo. Illustrated, price 7s. 6d.

MALTA, under the Phœnicians, KNIGHTS and ENGLISH. By WILLIAM TALLACK.

"It [the book] is probably the best guide the intended visitor to Malta can take with him. In a tone partly historical, partly scientific, partly antiquarian, and everywhere religious, the author tells us about all that is interesting in Malta, from the Bakery to the Religious Procession of Passion-week; from the Cabiri to the hammer-headed sharks."—*Literary Gazette*.

"The book is good reading, being both informing and interesting; and is likely to be often and long sought for for clear and accurate particulars of the natural history and the modern social condition of Malta."—*Nonconformist*.

"A pleasant volume on one of the pleasantest spots of the South of Europe."—*London Review*.

Crown 8vo. Illustrated, price 5s.

PETER JONES and the OJEB-

WAY INDIANS; with especial reference to their Conversion to Christianity. By Rev. PETER JONES (Kahkewagonaby), Indian Missionary. With a brief Memoir of the Writer.

"The quotations we have given will certainly recommend this graphically-written book to the Christian philanthropist."—*Nonconformist*.

"There is nothing connected with the character, mode of life, social institutions, government or religion of the Indians which is not described in a simple and instructive manner."—*Morning Star*.

"Full of graphic pictures and most interesting details of Indian life, manners, customs, religious feasts and sacrifices, wars, amusements, &c."—*Caledonian Mercury*.

Crown 8vo. Illustrated, price 5s.

NEW ZEALAND SETTLERS

and SOLDIERS; or, the War in Taranaki; being INCIDENTS in the Life of a Settler. By Rev. THOMAS GILBERT, formerly Pastor of the General Baptist Church, Hastings, Sussex.

"The volume is a well-executed 'picture in little' of a highly interesting portion of the globe, intimately acquainted with the mother-country."—*Morning Advertiser*.

Crown 8vo. cloth, price 3s. 6d.

The EARTH we INHABIT: its

PAST, PRESENT and PROBABLE FUTURE. By Capt. A. W. DRAYSON, R.A.

"The book is neatly turned out, is a complete *summa* in *parvo*, and deserves to be examined with great care, and without prejudice; for the evidence, to a mind gifted with common sense, is certainly most convincing. There will, however, probably be considerable opposition offered to it by those whose fame has been built upon the various and intricate theories which are now supposed to explain all the above-mentioned facts, but which, in too many cases, merely mystify the reader, and leave the causes more obscure than ever."—*Scottish Independent*.

"The book broaches a curious and interesting theory: the author sustains it in a manner to compel attention, and writes with a vast amount of knowledge and profound scientific scholarship."—*Illustrated Paper*.

Fourth Edition, price 1s.

The SEARCH for a PUBLISHER;

or, COUNSELS for a YOUNG AUTHOR. It contains Advice about Binding, Composition, Printing and Advertising; also Specimens of Type and Sizes of Paper. It is a complete *Literary Guide* for a Novice, and full of exact and trustworthy information. Sent post free.

"We wish we had seen such a book fifteen years ago, that's all. It is full of necessary information; and if thoroughly digested, it will save some head-aches, heart-aches, and perhaps—despicable as the consideration must be to the child of genius, quaffing nectar above the clouds—a few golden sovereigns, bearing the image and superscription of Victoria the First."—*Christian Weekly News*.

ALFRED W. BENNETT, 5, Bishopsgate-street
Without.

HOULSTON & WRIGHT, 65, Paternoster-row.

MR. BENTLEY'S LITERARY ANNOUNCEMENTS,

TO BE PUBLISHED IMMEDIATELY.

HURST & BLACKETT'S NEW WORKS.

The LIFE of J. M. W. TURNER, R.A.
From Original Letters and Papers furnished by his Friends
and Fellow Academicians. By WALTER THORBURY.
2 vols. 8vo. with Portraits, &c. 30s.

**The LIFE of Admiral Sir CHARLES
NAPIER, K.C.B.; with HIS CORRESPONDENCE.** From
his Private Papers. By Major-General ELMES NAPIER.
2 vols. 8vo. with Portrait and Charts. 30s.

"Sir Charles Napier will undoubtedly rank among the first of
our sea worthies. He has found a worthy biographer and chronicler
in the person of his Step-son. The biography abounds in
traits of character, and there are details of love, marriage and
home-life which contrast very pleasantly with the more exciting
scenes. The work is very honestly put together; without pre-
tence, it accomplishes much; bringing all the incidents of the
Admiral's life together, so as to create a story of great interest,
with much that is amusing for the general, and more that is
instructive to the professional reader."—*Athenæum*.

"The personal history of another of England's great sea-heroes
is sure to be warmly welcomed by the British public. This work
possesses an interest which will not pass away with the present
generation. We know of no books so likely to excite the enthu-
siasm of English youth as Southey's 'Life of Nelson' and these
'Memoirs of Admiral Napier.'"—*Daily News*.

FRENCH WOMEN of LETTERS.
By JULIA KAVANAGH, Author of 'NATHALIE,' &c.
2 vols. 21s. [Nov. 22]

TRAVELS in the HOLY LAND. By
FREDRIKA BREMER. Translated by MARY HOWITT.
3 vols. [Just ready.]

**The OKAVANGO RIVER. A Nar-
rative of Travel, Exploration and Adventure.** By CHARLES
JOHN ANDERSSON, Author of 'LAKE NGAMI.' 8vo.
with Portrait of the Author and numerous Illustrations. 21s.
"Mr. Andersson's book, from the number of well-told adven-
tures, its rich fund of information, and spirited illustrations, will
command a wide circle of readers. The interest of his story never
flags for a moment."—*Athenæum*.

**LADY CHARLOTTE PEPYS' DO-
MESTIC SKETCHES IN RUSSIA.** 2 vols. 21s.

"We recommend these interesting and agreeable volumes to all
who wish for light and pleasant reading, besides acquiring a
knowledge of the ways and customs of another country. We
congratulate Lady Charlotte Pepys on having done more by her
lively sketches to familiarize the English public with Russian
inner life than most of our travellers' or historians' weighty
volumes."—*Sun*.

**The SECRET HISTORY of the
COURT of FRANCE under LOUIS XV.** Edited, from rare
and unpublished Documents, by Dr. CHALLICE. 3 vols.
with Portraits, 21s.

**THE VALLEY of a HUNDRED
FIRES.** By the Author of 'MARGARET and her BRIDES-
MAIDS.' Illustrated by J. E. MILLAIS, A.R.A. 5s. bound.
Forming the New Volume of HURST & BLACKETT'S
STANDARD LIBRARY of CHEAP EDITIONS.

"Whether in delineation of character, in lucidity of plot, in
description of scenery, in representation of life as it is, or in sound
well-enforced moral, we know no novel of the last three or four
years to equal this production of the popular Author of 'Margaret
and her Bridesmaids.' If asked to classify it, we should give it a
place between 'John Halifax' and 'The Caxtons.'"—*Herald*.

THE NEW NOVELS.

The LAST of the MORTIMERS. By
the Author of 'MARGARET MAITLAND,' 'The HOUSE
on the MOOR,' &c. 3 vols. [This day.]

SIR RICHARD HAMILTON.
3 vols. 21s.

"The reader will be delighted with this book, and will be the
better for reading it. It is full of action, life and character. The
plot is well constructed, and the style vigorous. The hero is a
faithful portrait of a thorough English gentleman, and the pic-
tures of English society are very gracefully and agreeably drawn."
—*John Bull*.

The HOME at ROSEFIELD. By
EDWARD COPPING. 3 vols.

"A very touching and life-like story, of great simplicity and
beauty; and hard indeed must be the heart unaffected by its
genuine tenderness and pathos."—*Daily News*.

EAST and WEST. By J. Fraser
CORKRAN. 3 vols.

"A good novel. The author has wit and knowledge in abun-
dant, and an eloquent mastery of words."—*Daily News*.

MACMILLAN'S NEW LIST, NOW READY.

Second Edition, crown 8vo. 6s. 6d.

CAVOUR: a Memoir. By EDWARD
DICEY. With Portrait.

This day, price One Shilling,

TRACTS for PRIESTS and PEOPLE.
No. IX. DISSENT AND THE CREEDS.

1. DISSENT FROM, AND DISSENT IN, THE CHURCH.
A Lay Dialogue.

2. THE CREEDS. By the Rev. FRANCIS GARDEN.
[This day.]

No. VIII. EVIDENCES FOR THOSE WHO THINK
AND FEEL MORE THAN THEY CAN READ. By the
Rev. C. P. CHRETIEN, M.A., Rector of Cholderton, Wilts.
Fellow and late Tutor of Oriel College, Oxford.

Now ready,

The FIRST SERIES (Nos. I to VII.), hand-
somely bound in cloth, price 6s.

In 2 vols. crown 8vo. price 21s.

MEMOIRS, LETTERS and REMAINS
of ALEXIS DE TOCQUEVILLE. Translated from the
French by the Translator of 'Napoleon's Correspondence with
King Joseph.' With large Additions.

"The appearance of this book in an English dress will be
welcomed by every politician and every Englishman capable of
appreciating exhaustive and solid thought. . . . We do not know
another writer, unless it be Pascal, who leaves precisely the same
impression."—*Spectator*.

"Few men of the 19th century have exercised a more remark-
able influence. . . . Charming as specimens of style, but they are
of infinitely greater value, as showing the inner life of a Man
who was as simple as a child, and yet as gifted as any of the
many learned writers and scholars whom France has produced."
—*Bell's Messenger*.

The Third Edition of

**The GOLDEN TREASURY of SONGS
and LYRICS.** [Will be ready on Monday.]

In 3 vols. crown 8vo. 31s. 6d.

TOM BROWN at OXFORD. By
the Author of 'Tom Brown's School-Days.' [This day.]

THE LETTER and the SPIRIT:
Six Sermons on the Inspiration of Holy Scripture, preached
before the University of Oxford. By C. P. CHRETIEN,
Fellow of Oriel College, Oxford, and Rector of Cholderton,
Wilts. In crown 8vo. cloth, 5s. [This day.]

In crown 8vo. cloth, 7s. 6d.

LONDON, SATURDAY, NOVEMBER 16, 1861.

LITERATURE

The Life of J. M. W. Turner, R.A. Founded on Letters and Papers furnished by his Friends and Fellow Academicians. By Walter Thornbury. 2 vols. (Hurst & Blackett.)

If Mr. Thornbury thought of suiting his manner to his subject, when writing of the Life and Works of Turner, he unwisely attempted to emulate in language that period of the great painter's career when sobriety and taste were cast to the winds, and when that which was florid, extravagant, incomplete and experimental (howbeit poetical) took their place. — Two closely-printed volumes, executed in the style of 'The Rock Limpet,' are startling as a literary visitation. One so clever as their writer, whose range of epithet and allusion is so wide, might judiciously have reflected that rhapsody and ornament (however genuine be the one in its enthusiasm, however intricate the other in pattern and rich in colour) have their uses, and their limits. Mr. Thornbury's delight in them has betrayed him, — and not only so, but apparently, for the time, has exhausted such force and brilliancy as he once possessed, in their application. — Too many of his ambitious passages are the merest commonplaces, — too many of the noblest sentiments expressed, are only so many sentimentalities, — too many of his epithets fit awry. — Turner is brought no nearer to us by assurances that "Wellington would have liked him," because he sat fishing out in the rain, — by questions such as, "Is it possible that our glorious creature could have committed this or the other meanness?" — by visions, in which Mr. Thornbury, as cicerone, leads us through the haunts which the painter frequented, — by magnanimous admissions, when our author is disposed (as he says) "to make a clean breast of it," that the painter could be human and imperfect. Nor will such an adoration as this, "And now, gentlemen, let us retire and consider our verdict," move many jurymen greatly. — They will, on the contrary, find in such contrivances more of manufactured high spirits, more of those random dashes and starts and hurries, calculated with a view to effect, than can be forgiven to a biographer, — even if it has been conceded to him that he is at liberty to "set his palette" so as to match that of the painter of 'Rain, Steam and Speed.'

The task in hand, however, was not an easy one. The Preface announces that Mr. Thornbury was enjoined by Mr. Ruskin to fix his mind on "the following main characteristics of Turner: * * Uprightness, Generosity, Tenderness of heart (extreme), Sensuality, Obstinate (extreme), Irritability, Infidelity." — It was no light matter to comply with injunctions so oracularly delivered by "the greatest of all living or dead writers on Art," — to present a favourable aspect of one so complex in nature as Turner; above all when assertion must needs be justified by facts and traits of character. Then, that material was not plentiful may be implied, — since our author, when it is scanty, fills pages with episodic retrospects, which stand here without argument or proportion, seeing that the business in hand was not a complete History of Painting and Engraving in England. With regard to Turner's early days, by lack of matter Mr. Thornbury has been driven to the ingenious devices of which Godwin's 'Life of Chaucer' offers such noble specimens. — As we draw nearer to our own times there is more to tell. Turner's brother-Academicians have been communicative. The pages contributed by the daughter of his old friend Wells, Mrs. Wheeler,

and by the Trimmers are among the best in the book. It will strike others besides ourselves, as singular, that not half-a-dozen personal traits or reminiscences have been contributed by Mr. Ruskin. — The result of the whole is, that we are driven to take for granted the largest part of those virtues which we are so solemnly bidden to admire; and to question, not the honesty of Mr. Thornbury's idolatry, but the rationality of its basis. — It has been the fashion of late to speak of Turner as one neglected till a powerful and poetical advocate compelled the public to attend to his excellencies. — What are the facts? Only the recorded praise of contemporaries from the very moment he took rank among them! — Only one hundred and forty thousand pounds amassed during his lifetime! — His claims to generosity must virtually rest on his bequest to the world of Art of his pictures and fortune; since we cannot award any great value to half-a-crown given reluctantly away now and then — a social entertainment never — a drawing very rarely. — The reminiscences contributed by Mr. Trimmer, as we have said, are among the best portions of this work. Turner used the house of the Trimmers as his home — went thence to fish, to sketch, and made many drawings among them, "one of which," says the memorialist, "he once thought of giving to my father." — There is an anecdote, it is true, to be set on the other side, of a loan of 20,000*l.* to a friend in need; but this is told with so much hearsay mystery, that we cannot accept it as the exception to known habits and records of life; nor, were it proved, as an indication of a character habitually genial and beneficent. Turner was close with his relations, — he retained his father to keep his gallery like a servant, — he would not allow any one to see him paint or draw, — he was fraudulent (Mr. Thornbury is compelled to suspect) in some of his dealings, as the copies of the 'Liber Studiorum' testify, — he was grinding in his bargains. — There have been other men more niggardly in their generosity, more distorted in their uprightness, who have compounded for the meanness and selfishness and suspiciousness of a long life by a magnificent act of testamentary charity — fit sequel to a state funeral and a commissioned statue.

To frame this preamble has been not pleasant; but the duty is rendered inevitable by the taste and tone of this book. — The Life itself must now be considered with reference to the foregoing remarks. — Joseph Mallord William Turner was born in Maiden Lane, Covent Garden, in April, 1775, the son of a barber of west-country origin, and of a Miss Marshall, native of Islington. But there is some confusion respecting her, since Mr. Thornbury says, in page 4, "I claim no 'blue blood' for Turner, nor do I want to"; while, four pages later, the mother is represented as belonging to a Nottingham family with a manor-house. — The match, it is hinted, may have been a stolen one; and Turner is described as, when a youth, resenting the behaviour of the genteel Marshalls on paying them a visit! At page 19, we read of "an uncle on his lady mother's side," one Mr. Marshall, who was a butcher at Brentford. So that our knowledge whether Mrs. Turner was "high" or "low" remains much as it was before the pedigree was tossed from the right hand to the left by our author. It seems agreed, however, that she was a woman of fierce and ungovernable temper, which partook of and ended in insanity. — The father, who was of a more cheerful spirit, divined at an early period that his son was fit for better things than a barber's shop, and sent him to the

Brentford Free School, where the boy took his first steps in Art by drawing cocks and hens on the wall with chalk. It was about 1780, Mr. Thornbury thinks, that, on accompanying his father to the house of Mr. Tomkinson, the pianoforte manufacturer, Turner was struck with a lion on "a silver salver which leaned against the wainscot." Mr. Thornbury does not believe that the lion belonged to an escutcheon on a table (as Mr. Peter Cunningham and others have asserted), although he assures us that the future painter revelled in the heraldic "reds and blues" — of a silver salver! — Then follows a short character of Mr. Tomkinson as "a self-conceited, fussy man," which we have reason to fancy as mythical as that painted silver plate, which, we are told, stirred up the boy to emulate its glowing colours, on his return to Maiden Lane.

As we get on, — groping through a labyrinth, — we find Turner making acquaintance with Girtin, copying drawings by Paul Sandby (a man successful, full of humours, and generously helpful to brother artists), admiring mezzotinto prints after Vandervelde, sent to board at Brentford on account of bad health, — there breaking out into the resolution to draw elm-trees, birds, flowers, — anything, everything that was around him, — and saved by this happy accident, says Mr. Thornbury, from becoming a Piranesi (!) in architecture. — He fell in love, too, but without any after-result. Then he was sent to the Soho Academy, where he drew flowers (says Mr. Thornbury) "in the tambour-frame manner." When about the age of thirteen, "growing up short and thick-set, and with large but handsome features, clear grey-blue eyes and arched eyebrows; careless in dress, and, generally, a sturdy, determined, prudent boy, with an irresistible bias towards Art," he was transferred to a school at Margate, "probably in the boy immortalized by Charles Lamb"! — On leaving the school at Margate, Turner went to another school to learn perspective from "Tom Malton, in Long Acre," and began to show facility of hand by dashing in backgrounds, foregrounds and skies, to set off the designs of one "Mr. Porden, an almost unknown architect," whom Mr. Thornbury airily disposes of as a *Pecksniff*. — Old Turner entertained serious thoughts of making the boy an architect, on the strength of the tendency towards perspective effects shown in his early drawings. To this scheme the student was obviously not adverse, since, in later life, says Mr. Thornbury, with a comment which is truly encouraging, he "several times essayed the arduous task of designing a house, a task which seems to me by no means beyond the intellect of an intelligent man, especially if he have an artistic taste." — The youth, accordingly, was set to study geometry, — which he would not learn; on the hardship of which course of training Mr. Thornbury has paragraphs meant to be cutting. He forgets (but what is not forgotten in the contradictions of this confused book!) that the great artists of all ages, among whom he aspires to range his hero, have been great in no small degree because of the versatility of their studies. It is counted as no sorrow that in the early years of Buonarroti and Da Vinci, the one must have worked at sculpture, the other at engineering. It is not the greatest scandal against Salvator Rosa (the "base-born and thief-bred man," according to Mr. Ruskin) that he was an accomplished musician, lute-player, sonneteer and actor. When we find noticed among Turner's sketch-books a "gamut for the flute" transcribed, and among the miserable household possessions which the man of a quarter of a million of wealth left behind him

the self-same instrument of music,—when we read in Mr. Thornbury's own pages a criticism of the painful and fruitless struggles undergone by the painter to get at poetry, the conclusion inevitably comes that he was not so much thwarted by tuition, as dwarfed in his art, in his fancy and in his nature, by want of it.

Dr. Munro, of Chelsea, one who knew Girtin, was by this time awake to the promise of the young artist. Turner the elder was resolved to spend a legacy of 200*l.* in placing out Turner, then, "probably, about fourteen," with a landscape-painter. But here, again, Mr. Thornbury throws us into doubt. The landscape-painter, of page 53, who made a speech on the artist's later works, turns out, in page 54, to be Mr. Hardwick, the architect, for whom Turner executed many drawings, breaking out into his own fancies, so often as the compact permitted:

"Years after [says Mr. Thornbury], Mr. Hardwick showed Turner these early drawings: he remembered them, and pointing to the Lambeth public-house, said—'Ha! yes; up against that inn there was a board stuck up, on which was written, 'BE SOBER, BE VIGILANT'; and close by were the parish-stocks, I remember.'"

By Mr. Hardwick's advice, we are told, Turner became a student at the Royal Academy. He began to exhibit there, in the year 1790. Thus, it is to be seen, that when he was fifteen, Turner was already known, looked for, and earning money. If from the first he bent himself to the last task, so as to injure the development of other faculties, it may not, altogether have been the fault of necessity, (over which we are again and again invited to wail in this book), but in part, have arisen from the "generosity" of disposition, which we are bidden to fix our minds on as a characteristic.—In the Academy, Turner acquired such power as he possessed of drawing the human figure. That this was not contemptible, will be gathered from such of his earlier works as the 'Venus and Adonis,' in the collection of his stanch admirer and sketching companion, Mr. Munro of Novar, (not *Novars*, as here erroneously spelt),—as his 'Apollo and the Python,' exhibited in 1811. He seems for a time to have thought of making a fortune by portrait-painting; since at the close of Sir Joshua Reynolds's life, Turner used to go to his house to copy Sir Joshua's "peachy and exquisite women." But he was all this time colouring prints and washing-in skies for architects in the bed-rooms of Maiden Lane and Hand Court. Even so early in life he would suffer no one to see him draw; and, it may be feared, was generally a churlish comrade, if Mr. Thornbury is to be trusted:—

"One of his earliest tours was that made to Oxford to execute drawing commissions for his kind patron, Mr. Henderson. The tour was made on foot, in company with a poor artist named Cook, who afterwards turned stone-mason. Cook's feet got sore, and I believe he was soon left behind by the indefatigable Turner; as for sleeping, he rested in any small village public-house, and never prematurely affected the fine gentleman."

A further source of income was the teaching water-colour drawing in schools, at "five shillings a lesson—then ten shillings—subsequently a guinea." How one so secret and suspicious could impart instruction, unless he preached one art and practised another, it is not easy to conceive. The one companion for whom he appears to have shown some real regard was Girtin the water-colourist, who died young in 1802: a man whose "yellow drawings" are the delight of collectors. Turner painted his portrait, and would say, in after-life, "If Tom Girtin had lived, I should have starved." His first outbreak into originality appears to have been excited by a sketching tour in Yorkshire:—

"In 1798 he contributed drawings of Sheffield

and Wakefield to Walker's 'Itinerant'; and in 1800 he illustrated Whitaker's 'Parish of Whalley' with several drawings, among which was one of Farnley."

By the time that he was twenty-five years of age, Turner had got at that power in oil-painting, which enabled him to exhibit such a picture as his 'Fifth Plague of Egypt.' He was already sufficiently at ease in his circumstances to justify him in quitting the bed-room above the barber's shop, and to remove to Harley Street.—He took the barber with him, and turned him to profitable account:—

"The old man latterly," says Mr. Trimmer, "was his son's willing slave, and had to strain his pictures, and varnish them when finished, which made Turner say that his father began and finished his pictures for him. But I doubt if he varnished many pictures; few of them, I believe, were varnished at all; still, he was of great assistance to his son."

We must go on for another anecdote:—

"Soon after Turner first went to Solus Lodge, at Twickenham, his old father was met by a friend, very disconsolate, in Queen Anne Street. The expense of coming up daily to open the gallery was weighing heavily on his heart. Life was embittered to him by the thought. A week after, the same friend met him again, gay, happy, and jumping up on his old toes; he asked him the reason of the sudden change in his spirits; he replied,—'Why, lookee here, I have found a way at last of coming up cheap from Twickenham to open my son's gallery—I found out the inn where the market-gardeners baited their horses, I made friends with one on 'em, and now, for a glass of gin a-day, he brings me up in his cart on the top of the vegetables.'"

If there be a beauty and a poetry in these illustrations of filial "generosity," many may fail to detect it.

To return a step or two,—from Harley Street Turner removed—and here, again, Mr. Thornbury gives us two places and dates to choose between—to "the Upper Mall, Hammersmith" or to "Kensington Mall." One attraction to Hammersmith is suggested by Turner's biographer as having been the neighbourhood of De Louthembourg, the painter of 'Sunset Effects,' satirized by *Peter Pindar's*—

Golden cattle in glass pastures grazing.

And whose 'Eidophusikon' here (pertinaciously spelt 'Eidophusikon') was for a while a favourite show of London, long before Cosmoramas and Dioramas were dreamt of. Gainsborough, a man who delighted in many things which he had no thought of emulating, was "a passionate admirer of this exhibition."—Sir Joshua recommended it. Turner, "too cautious to tell many secrets, but not too proud to refuse to learn of any one," frequented De Louthembourg's society, in the hope of picking up some receipts of colour.—

"It is said that Mrs. Louthembourg grew very jealous of Turner's frequent visits to her husband, and that at last suspecting the young painter was obtaining all her husband's secrets from him, on his next visit she shut the door in his face and roughly refused him admittance."

We have gone further in grouping these details and traits—all put forth by a panegyrist—than we might have done—were it not for the claims on veneration for the man, thrust forward in every page and foiled by disparaging epithets applied to those who surrounded Turner. When we find the "restless poison of envy" which "oozed incessantly from Constable's tongue" dwelt upon to enhance by contrast the geniality of the man who, we had been reading a line earlier, "was too reserved often to praise";—when we find Sir Thomas Lawrence, the gentle, the munificent, whose patronage of and delight in Art went far to entangle his own fortunes, sneered at as "the landlord's

son,"—it is only fit that the barber's son, were he twice the divinity in his art he was, should be shown, as he was in reality,—the miserly master of his barber father!

Turner's life as an artist—as can be proved past cross-examination from the book before us—was one of success from the first, of gain and appreciation. What says Mr. Roberts, in his recollections?—

"I had come from the Theatre Royal, Edinburgh, to Drury Lane, and with my friend Stanfield, both then young men, were trying our best to improve upon the great scene-painters, of whom we were the successors at Old Drury. De Louthembourg and Greenwood we knew only by fame; but the mighty painter of the day that all spoke of, and whose works were the all-and-all to every young artist, was TURNER, at Somerset-house. The first works thought of by such as ourselves were Turner's."

The same "neglected" man was presently installed as Professor of Perspective at the Royal Academy—though it is here noted that he was a confused speaker—and a lecturer who sometimes did not appear in his chair when the lecture should be given.—That his earlier oil pictures did not fetch the prices commanded by those of later days is true; but he was amassing a fortune on every side, and, in must be added, by every conceivable device. There seems to have been in him an inborn desire to pit himself against Claude; and the following passages from Mrs. Wheeler's recollections will tell how the conflict at last came to pass. It would be unjust not to add, that her recollections of Turner as a man are entirely opposite in tone to the impression made on us by the biography set before us:—

"It is over sixty years since a friendship began, which ended only at the death of Mr. Turner, who, in very early life, was a constant and almost daily visitor at my father's house, whom he regarded as an able counsellor in difficulties. He usually spent three or four evenings in every week at our fireside, and though very much more than half a century has elapsed, I can still vividly recall to mind my dear father and Turner sketching or drawing by the light of an Argand lamp, whilst my mother was plying her needle, and I, then a young girl, used to read aloud some useful or entertaining work. * * Turner loved my father with a son's affection; to me he was as an elder brother. Turner's celebrated publication, the 'Liber Studiorum,' entirely owes its existence to my father's persuasion, and the drawings for the first number were made in our cottage at Knockholt. He had for a long time urged upon Turner the expediency of making a selection from his own works for publication, telling him that it would surely be done after his death, and perhaps in a way that might not do him that justice which he could ensure for himself. After long and continued persuasion, Turner at length gave way; and one day, when he was staying with us in Kent (he always spent a part of the autumn at our cottage), he said, 'Well, Gaffer, I see there will be no peace till I comply; so give me a piece of paper. There, now, rule the size for me, and tell me what I am to do.' My father said, 'Well, divide your subject into classes—say, Pastoral, Marine, Elegant Pastoral, and so forth'—which was accordingly done. The first drawings were then and there made, and arranged for publication. This was in the autumn of 1806. I sat by his side while those drawings were making; and many are the times I have gone out sketching with him. I remember his scrambling up a tree to obtain a better view, and there he made a coloured sketch, I handing up his colours as he wanted them."

This 'Liber Studiorum' marks a period in Turner's career. Mr. Thornbury shall continue the tale of its publication:—

"The publication of the 'Liber' stopped at the fourteenth number, making in all (including the frontispiece, which Turner somewhat ostentatiously gave to his subscribers) seventy-one plates. The

great work, strange to say, never paid, and it stopped as soon as Turner began the 'England and Wales,' and got other more profitable engagements. * * One of the first engravers chosen for the task was Charles Turner. The hard terms were that he should engrave fifty drawings, attend to the printing, publishing and delivery of the numbers (for Turner was going to be his own publisher), at the miserable price of eight guineas per plate. The painter was severe, exacting and sensitively careful in his corrections and additions. The engraver toiled through the first twenty plates (forming Nos. 1, 2, 3 and 4) patiently. He then frankly complained of the terms, and asked two guineas each in addition. The plate specially fought over was one of 'Windsor Castle,' with a view of the Montem Hill and some Eton boys on to the left-hand side. Some additional trees on the right-hand side, and some angry demands to make the steps up the Montem clearer, were the last straws on the camel's back. The painter, who had never had quarter given to him when he was struggling, now, in his turn, gave no quarter. * * The manner in which the 'Liber' was got up and the engravings printed was unbusiness-like, fitful and peculiar. We can scarcely wonder that, as is generally reported, some female servant of Turner employed to stitch the numbers stole many of the plates and sold them privately. Turner superintended the printing and publication in a most minute and yet in a most capricious manner. The alterations in effects before publication were as numerous as the additions, as is evident from the artist's proofs (the touched proofs), still preserved by Mr. Pye, Mr. J. Dillon, and other collectors. * * 'These variations,' says Mr. Dillon, who possesses a superb collection of the etchings, 'render it extremely difficult to form a complete set of the first impressions of the "Liber"; it appears that no set at the time when it was issued contained all the plates in the first state, or indeed in any one similar state; on the contrary, in the original numbers a very early and fine impression of one plate will be found in company with very late and bad impressions of another plate, as if one had been given with a rude sense of justice as a sort of compensation for the others.' I am sorry, too, to say, that there can be no doubt, from years of investigation by Messrs. Pye, Stokes, and other collectors, that Turner often took out the thickened letters of the plates in the bad third state, and engraved open letters higher up in the plate—in fact, he sold sham proofs; having private marks and scratches to indicate to himself the various states."

—And this was done by the "neglected" man, who, however "grasping," we are assured, was "just"!

From this point we must, of necessity, be briefer in comment, — since, after the publication of the 'Liber Studiorum,' the artist was secure in his own supremacy—in his own world—a royal lion, for whom no showman was needed. Mr. Thornbury thinks otherwise; and following in the wake of Mr. Ruskin, conceives that there was, till 'Modern Painters' appeared, no due appreciation of Turner's rare merits. The following story, as told with respect to the 'Ulysses' picture, is, in every point of fact, worth offering:—

"There can be, of course, no doubt that Turner selected this subject from the ninth book of the 'Odyssey.' Yet, with his usual secretive sort of fun, he loved to mystify busybodies and dilettantes about it. His friend, the Rev. Mr. Judkins, who is neither a busybody nor a dilettante, but a friend of Constable's, and a very clever landscape artist, was one day dining with Turner at a large party. A lady sitting next to the clerical artist, with the curiosity traditionally supposed to be peculiar to her sex, was full of the glories of the 'Polypheumus,' the wonder of the last Exhibition. It was one perpetual whisper. 'Wine! No, thank you: but oh, Mr. Judkins, do you—what do you think of Mr. Turner's great picture? And—a very little, if you please. Don't you now think it is a sweet picture?' &c., Turner, glum and shy, opposite, is watching all this. He sees where the lady's eyes

fall after she addresses her whispers to Mr. Judkins. His little beads of eyes roll and twinkle with fun and slyness. Across the table he growls:—"I know what you two are talking about, Judkins—about my picture." Mr. Judkins suavely waves his glass and acknowledges that it was. The lady smiled on the great man. 'And I bet you don't know where I took the subject from; come now—bet you don't.' Judkins blandly replied,—"Oh! from the old poet, of course, Turner; from the 'Odyssey!' of course."—"No," grunted Turner, bursting into a chuckle; "'Odyssey!' not a bit of it. I took it from Tom Dibdin. Don't you know the lines:—

He ate his mutton, drank his wine,
And then he poked his eye out."

As regards this same 'Polypheumus' picture, we find something less explicable than Turner's reference to "Dibdin":—

"It has sometimes struck me that Turner, who did occasionally steal, derived his idea of 'Polypheumus' from Michael Angelo's grand Titanic sketch of 'Morning.'"

Can this refer to the unfinished statues of 'Day' and 'Night' in the Medici Chapel at Florence? If so, where had Turner seen them? He does not seem to have travelled in Italy until 1828, and then wrote home to the brother Academicians of the country which had neglected him, "as under." The following letters, though scant of grammar, are among the best specimens of his correspondence collected in this work:—

"My dear Chantrey,—I intended long before this (but you will say, fudge) to have written; but even now, very little information have I to give you in matters of Art, for I have confined myself to the painting department at Corso; and having finished one, am about the second, and getting on with Lord E.'s, which I began the very first touch at Rome; but as the folk here talked that I would show them *not*, I finished a small three feet four to stop their gabbling: so now to business. Sculpture, of course, first, for it carries away all the patronage, so it is said in Rome; but all seem to share in the good will of the patrons of the day. Gott's Studio is full. Wyatt and Rennie, Ewing, Buxton, all employed. Gibson has two groups in hand, 'Venus and Cupid'; and 'The Rape of Hylas,' three figures, very forward, though I doubt much if it will be in time (taking the long voyage into the scale) for the Exhibition, though it is for England. Its style is something like 'The Psyche,' being two standing figures of nymphs leaning, enamoured, over the youthful Hylas, with his pitcher. The Venus is a sitting figure, with the Cupid in attendance; and if it had wings like a dove, to flee away and be at rest, the rest would not be the worse for the change. Thorwaldsten is closely engaged on the late Pope's (Pius VII.) monument. Portraits of the superior animal, man, is to be found in all. In some the inferior—viz., greyhounds and poodles, cats and monkeys, &c. * *

"Rome, Oct. 13th, 1828.

"Dear Jones,—Two months nearly in getting to this Terra Pictura, and at work; but the length of time is my own fault. I must see the South of France, which almost knocked me up, the heat was so intense, particularly at Nismes and Avignon; and until I got a plunge into the sea at Marseilles, I felt so weak that nothing but the change of scene kept me onwards to my distant point. . . Genoa, and all the sea-coast from Nice to Spezzia is remarkably rugged and fine; so is Massa. Tell that fat fellow, Chantrey, that I did think of him, *then* (but not the first or the last time) of the thousands he had made out of those marble craigs which only afforded me a sour bottle of wine and a sketch; but he deserves everything which is good, though he did give me a fit of the spleen at Carrara."

To this, we add a comment from Mr. Ripplingille,—placarded, almost as often as his name appears, by Mr. Thornbury, as "malicious." The lines marked by us in italics hardly justify such an epithet:—

"Mr. Ripplingille, when he was at Rome, inquired about Turner; he says: 'No other country

appears to have felt his kind of merit as it was felt at home, and in this we see the clue to Turner's great success and popularity. I do not find that in foreign countries Turner was at all esteemed. In a subsequent portion of his life Turner was in Rome, and there exhibited pictures which (no disgrace, I must say) won him no credit. At the time he was in the 'Eternal City,' an English tradesman was living there, who made a great to-do, and sold English mustard; and when his namesake came and exposed his wares, the Romans, who are a peculiar class of jokers, proclaimed that one sold mustard and the other painted it. Some intelligent Romans, with whom I talked, wondered that the English could be so devoid of taste as to admire and tolerate such extravagant productions."

In rectification, then, of those who advertised themselves by patronizing one who needed no patronage, the irregular, yet always successful, career of Turner as an artist is shown in this book.—To attempt analysis of the works which resulted from the Herculean labours of his long life would be superfluous here. They have been *be-written* enough. If they have had praise beyond their merit, their defects have been so dragged into light by irrational ecstasy and panegyric, that opinion is already rectifying itself. For a glimpse into the magician's cave, where many of his miracles and sorceries were concocted, we must be indebted to a guide:—

"Turner painted in Queen Anne Street in what he called his drawing-room, in which there was a good north light. Here he would be surrounded by water-colour drawings in all states of progress. * *

The sordid and unhappy-looking room in Queen Anne Street was remarkable for a dusty and dirty buffet, bought at some second-hand Jew broker's. In this Turner kept the immemorial sherry bottle with the broken cork that served him for a decanter, and which no joking of friends could get him to change. This was the identical bottle and buffet of which the old story was current at the clubs. A friend came to see Turner, and was treated with a glass of sherry from the old bottle and the old buffet—one glass. About the same time next year the artist came again, had another glass, and praised the wine. 'It ought to be good,' said Turner, 'it's the same bottle you tasted before.' * * And here [continues Mr. Thornbury,] I may as well introduce a vivid picture of the house in general, communicated to me by Dr. Shaw, a relation of Turner's on the mother's side. My informant went to claim relationship with the great man, a mode of introduction that Turner regarded with peculiar abhorrence. His other relations, no doubt, had ignored him when in poverty, and now that he was rich, they buzzed round his door, like flesh-flies round a carcase. The narrator was not one of these. Dr. Shaw says:—"I once had an interview with the great artist, and once only, with a view to claim the relationship. A time was duly appointed for an interview. Accordingly I went to his residence in Queen Anne Street, when I was ushered into a dark-room, where the mantelpiece was so covered with dust that I had great difficulty in ascertaining whether it was wood or marble, in the testing of which a large finger-mark remained as an evidence of careless and bad management in house-keeping. The door outside was as shabby as if it had formed part of a ruin; a circular space surrounding the knocker showed the original grain of the wood, all the paint having disappeared for many years past. This circular space was a remarkable feature of the door, being near white, and this vividly contrasted with the dingy accumulated paint and dirt which was visible on every other part of the door. The iron chain communicating with the kitchen-bell outside was as thoroughly rusted as if it had lain twenty years in a desert, without shelter from the oxidizing influences of rain and dew. It could not have been painted for twenty years at least, perhaps not for forty. As I had to wait some ten minutes at least before Mr. Turner made his appearance, I had leisure to examine the room and its contents. I have now forgotten the kind of furniture, but I well remember the dark, dirty, murky-looking

windows. They appeared to me as though they had been cleaned but once, and that must have been when they first came from the hands of the glazier. The room appeared to be less under the influence of the beautiful light of heaven than any other apartment I ever remember to have seen. It was a comparative dungeon with two dark-lanterns for windows. In the midst of various cogitations, which necessarily occupied my mind while alone in this dirty dungeon, of a sudden the great artist made his appearance. I bowed, not too obsequiously nor too low, putting a question to him immediately after the salutation as follows:—"May I ask if you are the Mr. Turner who visited at Sheldford Manor, in the County of Nottingham, in your youth?"—"I am," he answered in a tone and manner full of dignity, evidently evincing feelings of an untoward nature. He was clearly paving the way for a magnificent outburst of passion. The thunder-storm was gathering. To appease him I became somewhat bland in manner. I tried to throw oil upon the troubled waters. Assuming a manner which perhaps might be denominated one of a more winning kind, I said, "May I take the liberty of asking you whether your mother's name was Marshall?" He replied in a tone of voice, accompanied with the look of a fury, clearly showing that the flash of lightning had appeared to warn me that the storm was about to break. After this I began to feel uneasy. I felt half-inclined to say something monstrously uncivil to him for his bearish manners. I wanted, however, for him to begin the attack, which soon followed. He drew himself suddenly into the most dignified attitude I ever beheld even from a clever actor or infuriated duke. His manner was full of majesty, accompanied with a diabolical look. He said, "I consider, Sir, that you have taken a most unwarrantable liberty with me by the manner in which you have obtruded yourself upon me." I immediately apologized; to which he replied (by one of the most dignified and elegant bows I ever remember to have seen from duke, lord, dancing-master or actor), "I accept the apology." After humbling myself, I then felt that it was my turn, in justice to myself, to confront the great artist in a very bold and independent manner, accompanied with resentment. "I beg leave, Sir, to state to you," I said (at the same time assuming all the dignity of manner at my command), then marching to within a yard of him, and eyeing him as a warrior would look at the man he was about to bayonet, I addressed him as follows, "I am independent, Sir, both in spirit and in pocket, and be assured that my whole and sole object in calling upon you was to connect myself with the distinguished name of Turner." The smile that he gave me at this moment I can only compare to the rays of the sun suddenly breaking through dark and stormy clouds. He said, "I hope, Sir, whenever you come to town, that you will give me the favour of a visit; I shall always be glad to see you." He then preceded me to the door, which he opened, politely bowing. I frequently went to lounge away half an hour in his gallery, without ever obtruding myself upon him; I had also the privilege of taking any other person. This was our first and last interview. Turner almost entirely rebuilt his house in Queen Anne Street, and took great care to cut down the architect's bill. He himself designed the doorway; but neither doorway nor building has any merit or originality."

As age drew on, the old painter absented himself more and more from the dismal home thus described. He was known to shelter himself elsewhere, but confided the address to no one. Mr. Thornbury shall continue the narrative of his being discovered at Chelsea:—

"There was one who mourned and wondered at Turner's absence more than any of his other friends could, and that was his old housekeeper in Queen Anne Street, Mrs. Ellen Danby—the guardian of his murky house—his faithful old servant for so many long years of rain and sunshine. She was deeply troubled at Turner's mysterious disappearance; she knew he must be ill, but yet knew not how to find him amid the labyrinth of London. At last, one day, as she was brushing an old coat of Turner's, in turning

out a pocket she found and pounced on a letter directed to him, and written by a friend who lived at Chelsea. There, then, she felt sure he must be; it was for her to sally forth and discover him. 'This poor old lady, with another as infirm and old as herself, resolved at last to set out on a voyage of discovery. How they reached there "deponent knoweth not," but they did reach the cottage by the river-side, and finding that the adjoining cottage sold ginger-beer, the two old dames craftily treated themselves to a bottle of the same, got into a diplomatic gossip with the seller of ginger-beer, and by dint of the outlay of twopence and a little pumping, were quite satisfied that the lady and the old gentleman who lived next door must be the great painter and his landlady; but what must have grieved them much was that the gentleman had been very unwell, and little out for the last two months. Having ascertained this, the two got home as they best could, and Mrs. Danby contrived to apprise a relative and one of the executors, Mr. Harpur, of her discovery. Mr. Harpur lost no time in finding out the Chelsea cottage—only in time to find Turner fast sinking. On the following day he breathed his last.'

A man so exquisitely tender, as we are invited to believe Turner was, might have had some consideration for the fears of his "faithful old servant." We will go on, however, in his biographer's words, for a moment:—

"Many legends were afterwards told of Turner's reasons for thus hiding himself at Chelsea, like a runaway bankrupt. The most generally believed story is the following. Turner, requiring change of air for his health, went to Chelsea in search of lodgings, and found at last a little cottage, very cheap, not far from the present Cremorne pier. The cottage looked on the river, and had a railed-in roof, from whence he could observe sky effects. The landlady, seeing a little thick-set, shabby man, asked him for 'reference.' Turner replied, angrily, 'My good woman, I'll buy the house outright.' Then the landlady wanted to draw up an agreement. Turner again parried this by showing a roll of bank-notes, and offering to pay in advance. There was still a difficulty—the landlady wanted her new lodger's name. 'In case, sir, any gentleman should call, you know.'—'Name, name,' the legend goes on to report Turner as growling—'what is your name?'—'My name is Mrs. Booth.'—'Then, I'm Mr. Booth,' and by that name Turner went. But, unfortunately for the story, Turner did not carry about rolls of bank-notes which he could flourish. All that was found in his pockets after his death was a solitary black half-crown—black from long seclusion in a grimy unvisited pocket. In the streets of Chelsea, and all along the shore of the Thames, Turner was known to the street-boys, as 'Puggy Booth,' and by the small tradesmen he was designated 'Admiral Booth'; for the story ran that he was an old admiral in reduced circumstances. I am told that up to the period of his very last illness Turner would often rise at daybreak, leave his bed, with some blanket or dressing-gown carelessly thrown over him, and go up on the railed-in roof to see the sun rise and to observe the colour flow, flushing back into the pale morning sky. To me, there is in this tenacity of the dying man to his old love something very touching, something very sublime."

In regard to the "sublimity" of such a parting from life, we are again at issue with Mr. Thornbury. The poetical thing, to follow his strange reasoning, would have been if the magnificent miserly poet-painter had "gathered himself" into an obscure garret in Maiden Lane, there to die, where his artist's life had begun by reproducing the lion of Mr. Tomkinson's salver.

Throughout the book its writer has availed himself largely of Mr. Ruskin's criticisms. At the end Turner's intricately confused will is set forth at full;—the real intentions of which it is hard to gather beyond the fact that self-glorification by its maker, in the form of charity, was the uppermost thing in his mind.—The

Biography is closed by a carefully drawn-out catalogue of the pictures, prints and drawings executed by this man of indefatigable energy and royal pictorial genius. The attempt, we must repeat, at raising him to the heroic stature in any other character is a failure; in the course of which a skilled and picturesque writer and an honest lover of Art has lost himself. His style has suffered from the effort to argue that which fact has put beyond the power of argument, and from a desire to be enthusiastic up to the mark required by idolaters.

The Greek Testament. With Notes, Grammatical and Exegetical, by W. Webster, M.A. and W. F. Wilkinson, M.A. Vol. II., containing the Epistles and the Apocalypse. (Parker, Son & Bourn.)

We have often thought that the question, "What saith the Scripture?" has not received either the kind or the degree of attention it deserves. To do it full justice is certainly no easy matter. It involves two distinct investigations, either of which might afford occupation for a large portion of a life—the determination of the text, and the discovery of its meaning. Nearly twenty years ago, Mr. Scrivener announced his intention of publishing an edition of the Greek Testament based upon a collation of all the MSS. in this country. In his prospectus he stated that nearly sixty of the hundred and sixty Greek MSS. among us have never been examined, and most of the remainder too imperfectly, for critical purposes. It would appear that he has found the undertaking too extensive, if we may judge from his having waited ten years before he published a collation of only twenty MSS., and since made no further announcement as to the completion of his task. How much greater must be the labour involved in an examination of the MSS. in other countries also, scarcely needs pointing out. Yet, Mr. Scrivener—no mean authority—maintains that "nine-tenths, at least, of our materials are most imperfectly known. The only chance of escape, therefore, from our existing perplexity, must rest in a thorough review, and (if need be) a complete re-collation of the whole mass of our critical authorities: a work doubtless of much toil and magnitude, but under all the circumstances absolutely indispensable." Great, however, as the labour undoubtedly is, there are not wanting encouragements to it. What with the recent discoveries of MSS.—among which we may particularly mention that of Tischendorf's Sinaitic MS., a fac-simile edition of which is likely to be accessible to the public next year, through the munificence of the Russian Government—the publication of the Alexandrine and Vatican MSS., and other efforts in the way of Biblical criticism, we are in a much better position than at any previous period for approximating more closely to the original text.

The other branch of inquiry, which has to do with the interpretation of the text, is one of great delicacy, as well as difficulty. A collection of books, written by many different authors, at widely different times, in different states of society, all differing still more from our own than from each other, and in languages that have long ceased to be spoken, must of necessity be hard to understand. Add to this, the peculiar nature of the ideas intended to be conveyed—ideas so far above the ordinary range of human thought that the writers themselves laboured under the insufficiency of the medium they employed to communicate them; the fact that these books have been for ages the battlefield of conflicting sects and theological disputants; the overgrowth of foreign notions

derived from systems of philosophy and modes of thought prevalent at different periods, and tending to obscure what is in itself by no means easy of comprehension; and the various other disturbing influences in the shape of feelings and associations connected with this collection of writings which make it a book *sui generis*, or, as it is usually called, *the book*: and it will be still more evident that the task of Biblical interpretation is peculiarly difficult, requiring for its successful execution a combination of qualities not to be met with every day.

It is to be regretted that so few scholars equal to this great work should have taken it in hand; that Dr. Arnold should never have carried into execution the purpose he long cherished of contributing something towards its accomplishment; and that such men as Archbishop Whately—whose occasional and partial efforts in this department augur favourably for his success—has not devoted to it much more of their attention. The dignitaries of the Church are those to whom we should naturally look for a public service of this nature. Their sacred calling, their professional education, their command of learned leisure, and their independent position, all combine to give them peculiar facilities for its efficient performance.

Till within a very few years we had no edition of the Greek Testament at all adequate to the demands of modern scholarship and science, and even now we know not where to look for such an edition of the Old Testament by an English editor. If "the Bible, the Bible alone, is the religion of Protestants," surely they are interested in all that concerns its correct publication and exposition. Notwithstanding all that has been done, there can be no doubt that Bishop Butler is right when he says: "Nor is it at all incredible that a book, which has been so long in the possession of mankind, should contain many truths as yet undiscovered." Though no one person could hope to do justice to the whole of Scripture, there is no reason why there should not be a division of labour, as in the preparation of our Authorized Version. And if this version is ever to be improved—as can hardly be doubted—there must first be a considerable improvement in the state of Biblical criticism and interpretation among us. Should the study of these matters have no other effect, it would surely tend to moderate the heat and soften the asperity of theological controversy, and thus bring about a more peaceable spirit among the various bodies of Christians. We cannot help thinking, too, that sermons—about which so much has been said of late—would be none the worse, if exposition formed a more prominent feature in them. They would, at least, be more instructive, and more satisfying to the intelligent, if not more interesting—which, however, we believe they would be, rather than less so.

Among several recent contributions towards a more perfect acquaintance with "what saith the Scripture," the Greek Testament before us, which has just been completed, deserves favourable mention as likely to be of great practical value to many students. Less comprehensive in its aim, of smaller size, and consequently more moderate in price, than those of Alford and Wordsworth, it will probably be quite as useful to a different class of readers. It has no pretensions to rank as a critical edition. In this respect, as in several others, it is decidedly inferior to Alford's. The editors plead as an excuse for the long delay of six years since the publication of the first volume, that, besides being short of literary leisure, they have been much hindered by the difficulty of compressing their materials within the specified limits of two volumes. And it must be admitted that they have managed to say a good deal in a few words,

and all to the point. The meaning of the text is clearly conveyed in a skilful paraphrase, and the sequence of thought plainly pointed out. It must not be supposed that the notes are always brief. On the contrary, they are frequently more extended than those of Alford, particularly when relating to some point of doctrine. They are in a marked degree doctrinal, and devoted to the inculcation of the doctrines commonly called Evangelical. It is this exclusiveness of character, this appearance of having been prepared for the support of a particular set of opinions previously entertained, which makes them contrast unfavourably with Alford's; who seems to have come to his work with a more unbiassed and unfettered mind, a more simple aim to discover the real meaning after a much wider range of inquiry, a greater readiness to accept it whatever it may be and whatever its bearings, and a more unflinching determination to utter his honest convictions without reserve. At the same time, we gladly acknowledge the scholarship and ability which Messrs. Webster and Wilkinson have displayed in the execution of their task. They are not so blindly wedded to their doctrinal opinions as to refuse submission to the laws of sound interpretation; still less do they ever suffer themselves to be betrayed by an excess of zeal into any bitterness of feeling or harshness of expression towards those of a different school. Nothing can be more admirable than the Christian courtesy with which they write on topics too often made the occasion for indulging in a bad spirit.

The copious illustrations drawn from classical Greek and Hebrew, as well as the frequent references to grammatical laws and usages, are a valuable feature of the work. It would have been well if more use had been made of the Septuagint and the writings of Josephus and Philo, as sources of illustration, after the manner of Mr. Grinfield's 'Greek Testament Interpreted by the Septuagint.' The authorities referred to on Biblical matters are neither numerous nor of a high character.

We cannot admit the sufficiency of the editors' apology for adopting what is substantially the "Received Text," so called from the boast in the preface to the Elzevir edition. As Prof. Jowett observes, no one would think of publishing Thucydides or Sophocles in a text two hundred years old, after the labours of Bekker and Dindorf; nor can we see the reasonableness of doing this with the Greek Testament, after all that has been done in the way of improvement by Mill, Griesbach, Lachmann, Tischendorf and others, simply because the text in question has been extensively circulated, and is that from which the Authorized Version was principally made. In the estimation of Alford and competent Biblical scholars in general, its critical value is very slight, it having been derived from bad texts badly employed.

New Readings for the Motto of His Royal Highness the Prince of Wales, and for his Plume of Ostrich Feathers; on the Occasion of His Royal Highness entering his Twenty-first Year, 9th November, 1861. By Dr. W. Bell. (Published by the Author.)

WE really half-suspect that Dr. Bell is a very wicked gentleman. It is all very well for him to inform us that he has a new reading for the translation of the Prince of Wales's Motto; but what if under the guise of his humour and his learning he entertained a desire to plunge us into a war with France! and, consequently, with all the other governments in Europe that would not espouse our side of the quarrel! Dr. Bell affirms that not only is the

Prince's device to be set to rights, but that the Prince's rights are to be asserted also. The motto is good old English. The rights are Flemish. The Prince is the defrauded heir of a very fair slice of French Flanders, and we fear that Dr. Bell, in his Mephistophelian wisdom and craft, would be glad to see "H.R.H." go either to law or to war about it.

First, however, with respect to the motto which now belongs to a royal imp of fame, whom the doctor describes as "our noble heir apparent," and compliments on his "compliant disposition," to show that the author is quite in the secret of things at the palace;—Dr. Bell deems, that as the young Prince promises to add "a grace and dignity to the princely plumes of the principality" (mark the alliteration), "with which they have hitherto rarely been invested," it is desirable to free plumes and motto from misapprehension and obscurity which have dragged the feathers and kept a Henry Bertram from a Franco-Flemish Ellan-gowan.

Whatever qualifications the author may have as interpreter of languages and the law of inheritance, we are compelled to say that, if we may judge from this book, he has but scanty respect for his own, if English be his own, tongue. It is seldom that we have seen a text so carelessly delivered to a patient public. He says of the motto, that, "like the shake of Lord Burleigh's wig, it carries with it most prodigious meaning." He dresses the Elizabethan peer in a catarract peruke, and claps a "prodigious" to it, by way of cue, which adds to the anachronism of the dressing. Of the Flemish dialect of Queen Philippa's time, he remarks that it "had a very fluctuating orthography"; he says of a certain German syllable, that "it requires only a hard breathing" to do so and so; and he has such a regard for Dr. Latham, that he is ready to "pay" to his philological inquiries a "great difference." Anon, Dr. Bell, on his own authority, clubs three p's together in "appears," of which liberality we will not say much in censure, as the Doctor nine lines lower down, honestly acknowledges that he has, perhaps, "been more diffuse than the occasion required;" then, with all the heartiness of Mrs. Malaprop, after discussing one subject, he touches upon another as incidental to it, commencing with the words, "and it may be here accidentally noted"! and, finally, with as much indignation as before of heartiness of the lady in question, he records how Queen Philippa and her husband were on a certain occasion "foisted of their portion of some of the finest provinces in the Netherlands." All this is not more risible than censurable, though mere carelessness be the cause of all. But Dr. Bell, who steps into the professorial chair to teach the royal bencher, of yesterday, not only the bearings of law, but the interpretation of language, is not only chargeable with slips and inadvertencies: some of his sentences are English only in as far as they consist of English words; but they are not English by right of grammar. We have as much "difference," perhaps, for Dr. Bell as he may have for Dr. Latham, but we cannot construe some of his paragraphs. We stumble now and then on a very singular pronoun which is pressed into the duty of representing a brace of antecedent nouns; and there is a "should have been," at page 40, to which Dr. Bell seems to give a future signification, but if he intended the words to have a past signification, he is on the more painful horn of the dilemma still, since he states that "this episode in the life of our most valiant English monarch is so little ignored by Hume, and is so little regarded by our chroniclers, though of considerable weight upon the

foreign politics and general bearing of his reign, that some notice of it *should have been given*." Is it not a curious reason to advance that *because* a thing is ignored, it should have been noticed? Dr. Bell means to say that as historians and chroniclers have been ignorant of the incident, he will, therefore, explain, or relate it,—which he proceeds to do; but why so punch the head of Priscian, previously?

Having thus pointed out the carelessness of style, aggravated by the errors of the press, which the author has not cared to correct, there only remains to be said that the Doctor's treatment of history is as censurable as his disregard for the proprieties of grammatical construction. At page 37, he gravely states, when speaking of the Battle of Crecy, that the Black Prince who fought so nobly on that well-won field was "then only about nineteen years old." Young Edward was born in 1330, and Crecy was fought in 1346, when that really "marvellous boy" was only about sixteen, and not nineteen, years old.

With these remarks, which have been forced upon us by the slovenliness of the author's workmanship, we come to the history of the feathers and of the motto. In narrating these, Dr. Bell does not go fully into the subject. Randall Holmes, the antiquary, claims an old British origin for the feathers, as the crest or badge of some sovereign Prince of Wales. Not many years since, at a meeting of some Welsh Archaeological Society, the locality of which has escaped our memory, the Rev. H. Llongueville Jones read a paper on the subject of the armorial bearings of the "Prince" of Wales. The reverend gentleman stated on that occasion, that the arms of Roderick Mawr, previous to the division of Wales into principalities, were thus blazoned:—Argent, three lions passant guardant, with their tails passing between their legs and curling over their backs,—and taking altogether what heralds might assume to be a feathery form. At the Court of England the ostrich feather seems to have been employed as a symbol of greatness, or as the highest mark of graceful adornment, long before it was ever heard of in connexion with our heirs-apparent. The triple feather and the motto, however, first appear together with the Black Prince, and only subsequently to the episode of the brave, blind, old King of Bohemia, Count of Luxemburg.

There is, indeed, a record stating that the motto is really as old as the birth of the first Prince of Wales among English heirs, Edward of Caernarvon. Prince Pückler Muskau, a great mystifier, we allow, asserts that he heard, on the spot, of a tradition which declared that Edward the First, on presenting his newly-born son to the Welsh chieftains as their future Prince, exclaimed, in Welsh, "Eich Dynn," "behold your Man," or simply "your Man." Whether any traveller besides this German Fürst ever heard of the like tradition, we cannot say. We ourselves went in search of it within sight of that very Eagle Tower wherein the little Prince was *not* born, but we failed to discover any trail whatever of so pleasant and probable a myth. There is one other claimant for the originality of the motto as Welsh, a contributor to Sylvanus Urban of the last century, who, after cutting away at one end, filing at the other, touching up the centre, and altogether changing both the blade and the handle, avers that the words may then be made to mean "Triumphant in death." He has, however, the candour to add that nobody else in Wales would be able so to comprehend them.

The question, both as to motto and plume, was satisfactorily settled, to most men's minds, by the discovery of a contemporary manuscript

by John de Arden, in which that worthy medical gentleman expressly says that the Prince assumed the badge after conquering at Crecy the Bohemian King, who had borne it. There are some defects in this testimony undoubtedly; but they would be less difficult to reconcile with John de Arden's assertion than many of the statements made to support the theory of Dr. Bell.

Sir Harris Nicolas shows that the Black Prince attached more importance to his motto of "Houmout" than to that of "Ich Dien," "inasmuch as he does not mention the latter in his will, while he directed the former to be placed over each of the escutcheons on his tomb, as well on those containing the ostrich feathers as those containing his arms." Dr. Bell "agrees with Sir N. Harris Nicolas and Mr. Planché, that the motto is Flemish"; and then, by a process which we cannot comprehend as supporting the views with which he professes to agree, he adds, "by dividing 'Houmout' into two words, the entire rendering, 'Hou mout ich dien' is almost vernacular, and plain English, 'How must I serve!'" Almost! that is, neither the plain English which he wishes to prove it, nor the Flemish, which he unites with Nicolas and Rouge Dragon in declaring it to be! Moreover, if "Houmout" is to be divided to serve the Doctor's purpose of construing it, *How might*, or *How must*, what signification is there left in it as a motto to be placed alone on the tomb by order of the princely warrior there sleeping?

Dr. Bell is strongly in favour of *must* rather than *might*, and is strangely prepossessed in favour of the letters *st*, remarking,—“In fact, few words occur with *st* in any language, in which a careful examination will not find some relative superiority of idea or expression in the same category of thought.” All this only shows the playful fancifulness of Dr. Bell's nature. A stupendous tower gazed at by a stalwart man may represent that quality of idea to which the author refers; but a stunted column sat upon by a stumpy man, or a study full of stooping, starved students, hardly bears out the Doctor's theory. He might as well say that because *v i* begin *vice*, *villain*, and other words of evil signification, they represent an evil quality; but *v i* are the first letters of *virtue* as well as of *vice*; and though *st* commence strength and strenuous, we see no superiority of idea in them when they figure in stupidity, in stutrer, in staggerer, or a hundred other words with similar frontispieces.

But let us return to the motto and feathers. Dr. Bell alludes to two Flemish mottoes, "Ich vrude mich" and "Mein Biddeneye," embroidered separately on two corsets given by Edward the First to his Queen Philippa. We had thought that the First Edward had espoused, first, Eleanor of Castile, and second, Margaret of France; but clever fellows are so knocking history to pieces that the Doctor may be right after all. For the sake of some conservative ideas on this matter, let us, however, assume that it was Edward the Third who presented the pair of corsets to his wife, Queen Philippa,—readers may then accept, if they are so minded, the Doctor's remark, that the two mottoes form one sentence, the signification of which is, "I greatly rejoice at my marriage." Inclined or not to accept this reading, we are certainly not prepared to agree to the Doctor's conclusion, or suggestion, that Queen Philippa had also another motto, cut in two for another couple of garments, perhaps; that such motto was the sequence to the above; that the whole then read, "I greatly rejoice in my marriage: what service may I render (for it)"; and that the Black Prince took the latter portion (the Hou

mout ich dien) out of regard for so excellent a mother!

From this fancy let us contemplate the feathers, touching which Dr. Bell has something to say rather more to the point. He tells us that they form the rebus of Philippa's hereditary title, Countess of Ostrevant, a district so named from its forming the eastern boundary of the Frankish kingdom of Neustria. In the fourteenth century, died a certain Count William, *sine prole*, but leaving two sisters, Margaret and Philippa co-heiresses. Dr. Bell shall explain their position, and be responsible likewise for the confusion of personages in the following extract:—

"William the Second died in 1345, without issue, and the County then fell with his sister Margaret to the share of the Emperor Louis of Bavaria, not however without considerable negotiations and opposition from our Edward the Third, in right of another sister, our oft-mentioned noble minded queen Philippa, and of Margraf William of Jülich, equally entitled by his marriage with a third sister. * * It seems the Emperor Louis considered that the four provinces, Holland, Zealand, Hennegau, and Friesland, by William the Fourth's death without male issue, had become vacant, and as imperial fiefs escheated to the empire: with them, by a very bare colouring of right, he invested his wife, which can surely be deemed nothing less than bestowing it on himself, and he created her second son, William, under a title unknown to the Empire, as *Verbeider* of this new acquisition, the actual Governor. * * Whatever though the meaning, it is certain that by that imperial juggle Queen Philippa and, in her right, Edward the Third, her husband, were foisted of their portion of some of the finest provinces of the Netherlands."

After showing how Ostrevant became the prey of unscrupulous invaders, and was finally absorbed into the powerful French Empire, the Doctor, whose wickedness or hoaxing spirit here betrays itself, adds:—

"This *résumé* shows clearly the right of Queen Philippa to the title and territory of the County of Ostrevant, and how wrongfully dispossessed; but if the legal maxim, *nullum tempus nec regi nec ecclesie*, may be considered binding, an inchoate right, may still be held as vesting in the Crown of England, and in the person of his Royal Highness the present Prince of Wales; the ostrich plumes are an evident claim to title and land, upon the proof I shall now adduce, of undeniable connexion of symbol and name. With that retained, there is good title still."

Was ever such artful temptation thrown in the way of a young Prince of Wales, since Ben Jonson strove in majestic rhymes to fire the young Henry to the attempt of regaining the lost inheritance in France! What the *Moniteur* may have to say to Dr. Bell's challenge, is too awful to contemplate.

Of the first two syllables of Ostrevant, the Doctor holds the ostrich (without having found it) to be the legitimate symbol—

"*Vant* still remains to identify with feather the fan of our forefathers, which different in form and material from those now in use by our better halves, will here give every necessary conformity, and what renders the resemblance easier, was that ostrich feathers were most generally taken for the fans of the noble dames of the Court of Edward the Third."

We fancy we are coming to a conclusion in which strong proof is bound up; but no, that is all. "The three feathers may have typified the threefold name of bants" or *vants*, Ostrevant, Brabant and Teisterbrant. May! and if they did, what would be proved thereby? Is it on this poor matter this terrible Doctor is to fan us into a war with France? And so we come to the end of this droll book, in which the author makes confusion worse confounded, fails to establish any assertion, and closes with an

expression of his conviction that his new reading of the Prince's motto will be rejected, though it might suit, he thinks, the Volunteer Rifles. "How must I serve?" would be an appropriate device and a constant stimulus to action." Well, to us it sounds neither cheerful nor encouraging. But the whole thing is a joke, and of the heaviest with which unoffending virtue was ever afflicted. Alluding to Nicolas and Planché, the author frankly says:—"My reading is indeed for their interpretations a curious instance of Horace's apothegm,

Parturiunt montes nascetur ridiculus mus."

Why, so it is, Doctor; but, "an thou lov'st us, Hal," never be tempted to try this sort of gamesomeness again. Be at home with 'Shakespeare's Puck and his Folksore,' but no more of this. We only hope the Guards have not been called out, or the horse-marines summoned to invade Ostrevant, in order to support the alleged claim thereto (laid for him by Dr. Bell), of "Albert Edward of the Compliant Disposition."

The Russians on the Amur; its Discovery, Conquest, and Colonisation, with a Description of the Country, its Inhabitants, Productions, and Commercial Capabilities; and Personal Accounts of Russian Travellers. By E. G. Ravenstein. Illustrated by Maps and Engravings. (Trübner & Co.)

THE wild regions of the Amur, over whose darkness and barbarism the extended arms of Russian power and Chinese civilization have for generations met, possess at the present crisis a peculiar interest for the inhabitants of Western Europe. Rich in commercial resources, in wood and water, in fertile soil and precious minerals, the vast tracts, long populated by sparse nomad tribes, keeping herds of reindeer or horses, and subsisting chiefly on the produce of their fisheries, have recently been taken in the firm grasp of Muscovite policy, and are already yielding bountiful tribute to the Emperor of Russia. Geographically, they may be fairly designated a natural outlet for the migratory hordes, and a proper field for the colonial enterprise of the mighty Empire of the North; and however much reason we may, as a nation, have for uneasiness at Muscovite activity in Asia, we cannot deny that the recent extensions of the Czar's influence in the valley of the Amur are in accordance with the fitness of things, and hold out greater prospects of permanent benefit to the human race than we can point to in defence of our own position in the East. The result of Russia's onward course is a problem which can only be solved by distant ages; and, in the mean time, however it may eventually terminate, for good or for evil, the observant eyes of British statesmen will do well to watch it with attention, and a certain amount of not ungenerous suspicion.

As its title implies, the present work addresses itself especially to the political student; and as a comprehensive and faithful survey of the Amur, comprising all the facts relating to the subject to be found in the works of previous historians, the accounts of travellers, and a variety of state documents, it demands no ordinary praise. In his Preface, Mr. Ravenstein takes occasion to assure the public that "his volume has not been written in a hasty manner, for the mere purpose of meeting publishing demands, but is the result of the progressive labour of several years." The maxim "qui s'excuse s'accuse" would have deterred most writers from making the above statement. It cannot, however, be fairly applied to Mr. Ravenstein. Although we fail to discern in his pages "the progressive labour of several years," we are able to commend

him for intelligence, painstaking and general accuracy. His book is a good, honest book—a book that was needed, and that may be referred to as a reliable source of information. An amusing work it certainly is not. A volume less likely to please the patrons of circulating libraries, who, as a rule, are not hypercritical with works illustrating foreign countries, we have not seen for many a day. From first to last, it lacks nerve and spirit. The writer who volunteers as guide over trackless wastes, and desires to introduce his readers to almost savage clans, should be pictorial as well as observant, graphic as well as accurate. Mr. Ravenstein's great fault is his coldness as a delineator. In statistics, he is quite at home, giving complete and exhaustive catalogues of the plants, the animals and the products of the Amur; but when he treats of the characteristics and usages of the Tunguzian nomads, he still remains content to catalogue phenomena, and scarcely makes an attempt to people his stage with living creatures. This defect is doubtless due to want of personal acquaintance with the regions and people described. A student and a man of science, he reproduces what he has read, not what he has seen. To say that he is a bad narrator of travels would be unfair, for he only undertakes to record facts ascertained by travellers. A writer of another and more attractive school was Thomas Witleam Atkinson. His 'Travels on the Upper and Lower Amoor' are warm and bright with human feeling, and make the reader thoroughly at home with the barbarous and semi-civilized life he portrays. The Siberian traveller, it is true, never penetrated in the direction of the East beyond the north-eastern extremity of Baikal Lake, and stopped short of the Amur by four hundred miles; but his prolonged wanderings in Siberia had so imbued him with the spirit of the wildness and barbarism of Northern Asia, that Maack's 'Travels on the Amur,' published in St. Petersburg in 1859, from which he took his descriptions, were to him records of individual experience rather than materials for study.

Here and there Mr. Ravenstein varies his narrative of Russian encroachment on the Amur, from the middle of the seventh century till 1861, with accounts given by missionaries and other travellers. From the 'Annales de la Propagation de la Foi' is taken an extremely amusing letter, addressed in the year 1846, by M. de La Brunière, Missionary Apostolic, to the Directors of the Seminary for Foreign Missions, the intelligent simplicity and pleasant humour of which epistle might be profitably imitated by missionaries of our own Church. The torture which the traveller in the Amur must make up his mind to endure from mosquitoes, gnats, wasps and gad-flies, is described by the worthy missionary in terms which will make Spanish tourists blush to be eloquent on the lighter sufferings they have undergone:—

"Meantime no tigers appeared. But other kinds of animals, no less ferocious in my opinion, awaited us on our journey. I have not words to express to you the multitude of mosquitoes, gnats, wasps and gad-flies, which attacked us at every step. Each of us armed with a horse's tail fixed on an iron prong, endeavoured to strike them, and this weak defence only served to render the enemy more vicious in his attacks. As for me, I was completely beaten, without strength either to advance or protect myself from the stinging of these insects; or if, at times, I raised my hand to my face, I crushed ten or twelve with one blow. Two wretched horses, which carried the baggage and occasionally our persons, lay down panting in the midst of the grass, refusing to eat or drink, and could by no means be induced to march. They were all covered with blood. We had been already

three days on our journey, and four still remained before we could reach San-sim. We therefore changed our system of travelling, converted night into day, and reached the inn an hour before day-break. By this procedure we avoided two terrible enemies, the gad-flies and wasps; the mosquitoes alone escorted us, in order that we might not be altogether without annoyance. 'Those who know the country best never go without a mosquito cloth—that is to say, without a thick, double wrapper, covering the head and neck, and having two holes cut for the eyes. As to beasts of burden, to make them travel in the deserts five or six days in succession, under the noon-day's sun, is to expose them to almost certain death. These insects swarm particularly in moist marshy places, and on the banks of the rivers by which Manchuria is intersected. Beyond San-sim they grow to a monstrous size, particularly the gnats and wasps. As to others, as far as regards the punishment they inflict, it matters not whether they be small or large. The houses are somewhat preserved from them by the cultivated districts which surround them, and by their being fumigated with horse or cow dung; but they are not completely rid of them till the end of September, the time of the severe frosts."

The following anecdote of M. de La Brunière's apostolic labours is exquisitely droll:—

"Little presents made to the principal persons of the district soon established a familiarity of intercourse, which enabled me to speak openly and with authority of the Gospel. My hearers found the religion very fine; but the new doctrine, and the new preacher who announced it, stopped them short at once. One day—it was I believe the fourth of my arrival—I was sitting on the bank of the river conversing with one of the natives, and just beside us were his two sons engaged in fishing. In despair of catching anything, they pulled in their long lines and were going away, when I said, assuming a jocose tone, 'You do not understand; give me one of your lines.' I threw it about ten paces further, not without much laughter from the spectators. Providence willed that a large fish should bite at the very instant; and I drew out my prey, more astonished myself than those who laughed.—'This unknown,' said they among themselves, 'has secrets, which other men have not; and nevertheless he is not a bad man.'—In the evening, at supper, there was much talk about the wonderful capture I had made. They wished to know my secret. Instead of an answer, I contented myself with one single question: 'Do you believe in hell?'—'Yes,' answered three or four of the best informed; 'we believe in hell, like the bonzes of San-sim.'—'Have you any means of escaping it?'—'We have never reflected on that point.'—'Well then,' I replied, 'I have an infallible secret, by means of which you can become more powerful than all the evil spirits, and go straight to heaven.'—The first secret gained credence for the second. Thus Divine Providence disposes of all things. The next day, three long-beards of the village made their appearance in my chamber, armed with a jug of brandy and four glasses. 'Your secret,' said they, 'is of awful consequence. If our importunity does not hurt your feelings, we would wish to know in what it consists. Let us begin by drinking.' Notwithstanding the natural repugnance which I have for Chinese brandy, I thought it necessary to accept the invitation, in order to avoid incurring the aversion of these poor people, who could be made to know or understand nothing but through this channel. I then commenced to develop my 'secret,' by explaining the dogma of original sin, of hell, of the salvation wrought by Jesus Christ, and the application by the sacraments of the merits of the Saviour. It was in the simplest manner, and by familiar comparisons, that I proceeded. But, unluckily, my interrogators, taking ten or twelve bumpers to my one, became in five or six minutes incapable of understanding anything. However, I gained favour."

The zealous teacher was not deterred from again entering on religious discussion over cups of strong drink. On a subsequent occasion, "a few glasses of brandy" had so beneficial an

effect on his Manchurian auditors that they allowed his doctrine to be good and true, although they unanimously voted the Ten Commandments to be "an insupportable burthen."

The respect shown by the inhabitants of the Amur to "a dead tiger" is laughable:—

"The most redoubtable foe encountered by the natives is the tiger, and they are consequently very superstitious with regard to him, and are reluctant even to speak about him for fear of evil consequences. Images of the tiger are carved in wood and placed at the foot of large trees in the forest, or worn as charms, which are supposed to protect the bearer against his attacks. Still the Goldi occasionally kill a tiger, and appear very proud of the achievement; when this happens they fasten the animal to a wall of their houses, and the whole family passes in review before him, doing homage by bending low, and sarcastically addressing him as 'My Lord.' The skin soon finds its way into the hands of the Manchu, and is worn by high officials. The panther (*Felis Irbis*) is more feared than the tiger, and even the Goldi dare not attack him."

In his notes on the Oronchons and Manyags, the Tunguzians of the Upper Amur, Mr. Ravenstein observes:—

"The banks of the Upper Amur, down to the mouth of the Dzeya, are in the occupation of the Tunguzian tribes of the Oronchons and Manyags (Monagirs, Manègres), the principal difference between whom is, that the chief domestic animal of the former is the reindeer (Oronchon=reindeer-keeper), and of the latter the horse. The horses are small, but strong and of great endurance. Before going on a long journey the Manyag keeps his horse for a day without food, and on his return also the poor beast is made to undergo five or six days' abstinence. *This is done with a view of keeping the horse in working condition.*"

This is the most remarkable method for keeping a horse in working condition that we have ever met on record. Perhaps it was the beneficial result of such treatment on horses that induced General Busse to extend it to his soldiers:—

"One melancholy event in connexion with the war, and with which we were not acquainted at the time these pages passed through the press, has been communicated to us by a friend residing at Nikolayevsk in the following terms:—"It is unfortunately true that about 400 infantry were sent at the close of 1855 from Castris Bay to Kiakhta, of whom eleven only attained the end of their journey. With an insufficient supply of provisions, these miserable men, late in the season, left Castris Bay to ascend the Amur in barges. At that time the banks of the river had not been colonized, and when winter overtook the party some 1,200 versts below Shilkinsk, they died from hunger, exposure to the cold and exhaustion. The eleven survivors subsisted upon the flesh of their fallen comrades. Government hushed up the affair, and those responsible for the disaster, at whose head is Major-General Busse, who neglected to supply the battalion with suitable provisions, though ordered to do so, went without punishment. The surviving soldiers were sent away, and a Junker (ensign) amongst them was silenced by being promoted. Some years subsequently, the affair became known. It is true in its most revolting details." Major-General Busse has been promoted Governor of the Amur province!"

Before publishing a second edition of this serviceable and meritorious work, Mr. Ravenstein will do well to carefully revise it, looking out for those trifling errors which unavoidably creep into a work of compilation. Capt. Parker, who fell gallantly at Petropavlovsk, was of the Marines, not the Navy.

Hegelism and Philosophy—[*L'Hégélianisme et la Philosophie*, par A. Vera]. (Paris, Leclerc; London, Nutt.)

Introduction to the History of Philosophy and to the Philosophy of History—[*Prolusioni alla Storia, &c.*, by the Same]. (Milan, Editore del Politecnico; London, Nutt.)

Few persons who know anything about the fortunes of Hegelism in foreign parts can be ignorant of the zeal and the merits of Dr. A. Vera. Already have we had frequent occasion to refer to him as one of the very small number who really study German philosophy in a scientific spirit, and endeavour to make the results of their studies intelligible to the uninitiated. Dr. Vera is neither a hasty sketcher, nor a clap-trap orator, nor a mere repeater of the master's words. Writing generally in the French language, he addresses himself, in the first instance, to nations who have received nothing of Hegelism by the way of tradition, and to whom merely translated works of the most technical metaphysicians would be of little service. The 'Traduction de la Logique de Hegel,' which he published in 1859, with an introduction and comment, is really a work of original thought, by which the shelves even of those who read German philosophy in the original may be profitably shared.

The book entitled 'L'Hégélianisme et la Philosophie' was published in the present year, and exhibits Dr. Vera in an unusual character. We will not say that he is totally unknown as a polemical author; for his short English treatise 'On Speculative and Experimental Science,' which made its appearance in 1856, rises before the memory to prevent the assertion. Nevertheless, he is more renowned for diffusing his own views than for attacking those of other folks; and, therefore, a tolerably thick brochure, in which, notwithstanding his Italian origin and German training, he appears as the adversary of two brilliant Frenchmen, and is fully as sharp as they, may fairly be considered a novelty of its kind. The propagandists of German philosophy are, for the most part, either dry or inflated, but Dr. Vera is an "homme d'esprit" to all intents and purposes; and though he somewhat indignantly repels the complimentary imputation of "bon sens" made by his adversary, M. Saisset, and declares that he regards common sense and erudition with equal distaste, we are inclined to think that on this one point, M. Saisset is in the right, and that the Italian disciple of Hegel has an amount of "bon sens" which would not easily have been found in the auditorium at Berlin.

The *casus belli* is this: M. Paul Janet has been publishing a volume of 'Etudes' on the Platonic and Hegelian Dialectic, in which Plato is elevated at the expense of Hegel; and M. Emile Saisset has inserted in the *Revue des Deux Mondes* an article on Leibnitz and Hegel, in which Leibnitz is elevated at the same cost. Now, it is one of the main articles of the Hegelian creed, that the philosophy of the master is not only better than all the systems by which it has been preceded, but that it comprehends them all within itself, and is their most perfect development. An orthodox disciple of the Berlin teacher who is told that Plato is better than Hegel considers the assertion fully as absurd as a declaration to the effect that a block of marble just roughly hewn is superior, as a work of art, to a finished statue.

This being the case, Dr. Vera, as the proposed Champion of Hegelism in *partibus infidelium*, could not allow the utterances of MM. Janet and Saisset to remain unanswered. His reply is divided into several chapters, which

have almost the appearance of distinct papers, each written on a separate spur; and hence there is a continuous freshness about it which is agreeable in the extreme. Being not only thoroughly imbued with Hegelism, but also a great proficient in sarcasm and in the art of popular illustration, he not only detects the weak side of his adversaries with acuteness, but humorously exposes it to derision, so that ratiocination and "fun" are both pressed into his service. If Hegel may be treated with irreverence, well does M. Vera know the shallowness and unscientific character of the so-called Eclectic school, of its jugglery with philosophy and religion, of its ceaseless efforts to attain a transient popularity. Dr. Vera, however, does not stand in precisely the same position with respect to both his adversaries. Plato, the god of M. Janet's idolatry, he regards with all respect; but Leibnitz, the idol of M. Saisset, is with him a very second-rate sort of *joss*, hoisted up into a high place in the philosophical Pantheon on the strength of his mathematics. Philosophy and mathematics are different matters in the eyes of a Hegelian.

The "Prolusioni" are two Lectures, in the Italian language, delivered this year in the Academy of Milan, where Dr. Vera has recently been appointed Professor of Philosophy by the King of Italy. They are eloquently written, and were intended to attract the attention of the Milanese students to a doctrine which will have for them all the charm of novelty. Thanks to Dr. Vera, Hegel has now a footing in Lombardy.

Autobiography, Letters and Literary Remains of Mrs. Piozzi (Thrale). Edited, with Notes and an Introductory Account of her Life and Writings, by A. Hayward, Esq., Q.C. Second Edition. 2 vols. (Longman & Co.)

As a consequence of the publication of this lively book, Mr. Hayward has received no small amount of additional material since it appeared; and encouraged, on the one side, by success, on the other by attack, has extended and re-written one of its most piquant passages, that which refers to the separation betwixt Johnson and Mrs. Thrale, on the occasion of her second marriage. We find something too much of a pamphleteer's tone in the part re-cast. The writer's replies to Lord Macaulay's hyperbolic accusations (based on some preconceived notion), and to a later Edinburgh Reviewer, who followed suit in shuddering over the idea of a widow lady marrying a musical gentleman, as an inevitable degradation, would better have formed an appendical note than have been, as here, incorporated with the narrative. But there may be two opinions in regard to the course adopted; and, apart from these, there is the new matter for critics (who have taken Mr. Hayward's view of his heroine) to deal with.

This new matter in no respect changes the position of the parties in the duel, adds no new beauty to Mrs. Piozzi, no new injustice to Johnson, because he thundered against a marriage which was inconvenient to him.—She was known already to be a vain, coarse, brilliant woman, who was still sweet-tempered and practically helpful in the hour of need to others. The sage had been already discussed as a man: if himself irreproachable in morals, curiously elastic in bearing or forbearing with the deficiencies of others,—who, so long as he was enthroned at Streatham Park, ignored Thrale's infidelities,—who was willing to invite company to partake of a salmon sent by "my mistress," in the very juncture during which he has been represented as dismal, oracular and outraged on

account of her conduct.—The character of the Burneys as insincere, cultivated people, quivering on the wires of sensitiveness in regard to the approval of Court and of world, is not mended by any new disclosure.—There is neither light nor shadow added to the portrait of Gabriel Piozzi,—nothing new in offence nor defence of an Italian singer's marriage with an English widow, whose daughters were averse to the match. But it is to be observed that the Misses Thrale, who set themselves against Piozzi, seem to have cooled in equal proportion to the Burneys, by whose agency Piozzi was introduced into the household of the Southwark brewer. The truth of the tale, as of every mortal quarrel, can never possibly be told. Here, however, is Mrs. Thrale's own diary in regard to her last scruples, and those of her daughters, concerning her second marriage. We omit certain devout ejaculations, with which this woman, imprudent, though not false, garnished the record:—

"*Bath, Nov. 30th, 1783.*—Sophia will live and do well; I have saved my daughter, perhaps obtained a friend. They are weary of seeing me suffer so, and the eldest beg'd me yesterday not to sacrifice my life to her convenience. She now saw my love of Piozzi was incurable, she said. Absence had no effect on it, and my health was going so fast she found that I should soon be useless either to her or him. It was the hand of God and irresistible, she added, and begged me not to endure any longer such unnecessary misery. So now we may be happy if we will, and now I trust some [*sic*] query 'no?' other cross accident will start up to torment us; I wrote my lover word that he might come and fetch me, but the Alps are covered with snow; and if his prudence is not greater than his affection—my life will yet be lost, for it depends on his safety. Should he come at my call, and meet with any misfortune on the road..... death, with accumulated agonies, would end me. May Heaven avert such insupportable distress!

Dec. 1783.—My dearest Piozzi's Miss Chanon is in distress. I will send her 10l. Perhaps he loved her; perhaps she loved him; perhaps both; yet I have and will have confidence in his honour. I will not suffer love or jealousy to narrow a heart devoted to him. He would assist her if he were in England, and she shall not suffer for his absence, tho' I do. She and her father have reported many things to my prejudice; she will be ashamed of herself when she sees me forgive and assist her.

* * *Bath, Jan. 27th, 1784.*—On this day twelve months.....oh dreadfulest of all days to me! did I send for my Piozzi and tell him we must part. The sight of my countenance terrified Dr. Pepys, to whom I went into the parlour for a moment, and the sight of the agonies I endured in the week following would have affected anything but interest, avarice and pride personified...with such, however, I had to deal, so my sorrows were unregarded. Seeing them continue for a whole year, indeed, has mollified my strong-hearted companions, and they now relent in earnest and wish me happy; I would now therefore be loath to dye, yet how shall I recruit my constitution so as to live? The pardon certainly did arrive the very instant of execution—for I was ill beyond all power of description, when my eldest daughter, bursting into tears, bid me call home the man of my heart, and not expire by slow torture in the presence of my children, who had my life in their power. 'You are dying now,' said she.—'I know it,' replied I, 'and I should die in peace had I but seen him once again.'—'Oh send for him,' said she, 'send for him quickly!'—'He is at Milan, child,' replied I, 'a thousand miles off!'—'Well, well,' returns she, 'hurry him back, or I myself will send him an express.' At these words I revived, and have been mending ever since. This was the first time that any of us had named the name of Piozzi to each other since we had put our feet into the coach to come to Bath. I had always thought it a point of civility and prudence never to mention what could give nothing but offence, and cause nothing but disgust, while they desired nothing less than a revival of old uneasiness; so we were all silent on the subject, and Miss Thrale thought him dead."

A later extract is worth having:—

"*28th May, 1784.*—Here is the most sudden and beautiful spring ever seen after a dismal winter: so may God grant me a renovation of comfort after my many and sharp afflictions. I have been to London for a week to visit Fanny Burney, and to talk over my intended (and, I hope, approaching) nuptials with Mr. Borghi: a man, as far as I can judge in so short an acquaintance with him, of good sense and real honour:—who loves my Piozzi, likes my conversation, and wishes to serve us sincerely. He has recommended Duane to take my power of attorney, and Cator's loss will be the less felt. Duane's name is as high as the Monument, and his being known familiarly to Borghi will perhaps quicken his attention to our concerns. Dear Burney, who loves me kindly, but the world reverentially, was, I believe, equally pained as delighted with my visit: ashamed to be seen in my company, much of her fondness for me must of course be diminished; yet she had not chatted freely so long with anybody but Mrs. Philips, that my coming was a comfort to her. We have told all to her father, and he behaved with the utmost propriety."

It is clear that the Burneys were cognizant of the marriage, and made no cry over it. Later, when Madame d'Arblay prepared her own journals to be printed, and published the Memoirs of her father and their household, the story was set in a proper light, and the "memorialist" was invested with the proper mourning draperies; but on reading the letters and journals of the hour, it is not easy to escape the conclusion that the Burneys, with civilities and court courtesies, shuffled out of an affair which they may have helped to originate. Ere we leave a matter to which an importance was given, which at this distance of time seems strange to extravagance, it is fair to Mr. Hayward to say, that in his quarrel with his critic he seems to us to have the victory.

There remains for us only to extract a bright bit or two, which do credit to Mrs. Piozzi's spirit and vivacity. The following refers to the period after her return from Italy:—

"*1789, January 17th.*—Mrs. Siddons dined in a coterie of my unprovoked enemies yesterday at Porteous's. She mentioned our concert, and the Erskines lamented their absence from one we gave two days ago, at which Mrs. Garrick was present, and gave a good report to the *Blues*. Charming *Blues*! blue with venom I think; I suppose they begin to be ashamed with their paltry behaviour. Mr. Garrick, more prudent than any of them, left a loophole for returning friendship to fasten through, and it shall fasten: that woman has lived a very wise life, regular and steady in her conduct, attentive to every word she speaks and every step she treads, decorous in her manners and graceful in her person. My fancy forms the Queen just like Mrs. Garrick: they are countrywomen, and have, as the phrase is, had a hard card to play; yet never lurching by tricksters nor subdued by superior powers, they will rise from the table unhurt either by others or themselves.....having played a saving game. I have run risques to be sure, that I have; yet—

When after some distinguished leap
She drops her pole and seems to slip,
Straight gath'ring all her active strength,
She rises higher half her length;

and better than now I have never stood with the world in general, I believe."

The subjoined fragments from letters are worth giving:—

"I hate a general topic as a pretty woman hates a general mourning when black does not become her complexion.—Life is a schoolroom, not a playground.—In allusion to the rage for scientific experiment in 1811: Never was poor Nature so put to the rack, and never, of course, was she made to tell so many lies.—Science (*i. e.*, learning), which

acted as a sceptre in the hand of Johnson, and was used as a club by Dr. Parr, became a lady's fan when played with by George Henry Glasse.—Hope is drawn with an anchor always, and Common Sense is never strong enough to draw it up.—The poppy which Nature sows among the corn, to show us that sleep is as necessary as bread.—The best writers are not the best friends; and the last character is more to be valued than the first by cotemporaries; after fifty years, indeed, the others carry away all the applause."

The following specimen of Charles Fox's poetry, is said never to have been printed before:—

Where the loveliest expression to features is joined,
By Nature's most delicate pencil designed;
Where blushes unbidden, and smiles without art,
Speak the softness and feeling that dwell in the heart;
Where in manners enchanting no blemish we trace,
But the soul keeps the promise we had from the face;
Sure philosophy, reason and coldness must prove
Defences unequal to shield us from love.
Then tell me, mysterious enchantress, oh tell,
By what wonderful art, by what magical spell,
My heart is so fenced, that for once I am wise,
And gaze without rapture on Amore's eyes:
That my wishes, which never were bounded before,
Are here bounded by friendship and ask for no more?
Is't Reason? No, that my whole life will baffle,
For who so at variance as Reason and I?
Is't Ambition that fills up each chink of my heart,
Nor allows any softer sensation a part?
Oh, no! for in this all the world must agree
One folly was never sufficient for me.
Is my mind by distress too intensely employed,
By pleasure relaxed, or by vanity cloyed?
For alike in this only enjoyment and pain
Both slacken the springs of those nerves which they strain.
That I've felt each reverse that from fortune can flow,
That I've tasted each bliss that the happiest know,
Has still been the whimsical fate of my life,
Where Anguish and Joy have been ever at strife.
But tho' versed in th' extremes both of pleasure and pain,
I am still but too ready to feel them again.
If, then, for this once in my life I am free,
And escape from a snare might catch wiser than me,
'Tis that beauty alone but imperfect charms,
For tho' brightness may dazzle, 'tis kindness that warms:
As on suns in the winter with pleasure we gaze,
But feel not their warmth tho' their splendour we praise:
So beauty our just admiration may claim,
But Love, and Love only, the heart can inflame.

There are many new marginal notes, aphorisms and anecdotes, but we must leave others to gather them, having commended the praiseworthy diligence shown in enlarging and enriching a book already received with no ordinary favour.

OUR LIBRARY TABLE.

Civilisation considered as a Science. By G. Harris. (Bell & Daldy.)—The author is a barrister: and the book is dedicated, by permission, to Lord Brougham. After seeing the word "science" in the title, we happened to light on the assertion that the mathematics have scarcely advanced, if at all, since the time of the ancients. This made us think that the author must have some curious notion upon the advance of a "science," and we looked about to see what he meant by the word. And we found the following as the "elementary principles essential for the constitution of a science."—"1. That our knowledge of its nature and essence be certain and absolute. 2. That that knowledge be capable of being practically applied. 3. That the principles to be applied be certain and practical. 4. That, as a whole, it be a matter of practical application as regards its operation." We shall not attempt to criticize such a collection of elementary principles as these: they gave us an impression of the author's mind which the rest of the book confirmed. That book is made up of a large number of observations about all manner of social subjects, of every kind of merit and demerit: but without a vestige of anything which we are accustomed to regard as science. Of the conclusions of our author's science we shall state two. No civil disqualifications are to be imposed upon a man for his religious opinions, "provided, of course, that he be a real believer in the truth of Christianity." Unscientific civilization has got further than this: it has discovered that the reality of belief cannot be ascertained, and that mere profession is worthless. But our author evidently

means that a believer in Christianity is one who not merely believes in revelation, but takes a true standard of doctrine. He proceeds thus:—"Here, however, it is of great importance to keep in view the wide and essential distinction between any opinion and doctrine being actually and diametrically contrary to Scripture, and its being merely contrary to the strained and false interpretation which ignorant, or fanatical, or superstitious zealots may have presumed to put upon it." So it seems that scientific civilization would set the State at work with a view to determine what interpretations of Scripture may or may not be taught: for we are immediately told that public teaching which is diametrically contrary to Scripture ought to be prohibited. Mr. Harris gives no method of deciding all the controversies: but we have no doubt that, if the State would leave it to him, he would furnish a code of interpretation to which no person whom he would call reasonable could possibly object. Again, Mr. Harris would keep the parochial churches as at present, but desires that "chapels in connexion with them should be also used and endowed, to be filled by an inferior order called Deacons, who would be composed of the present dissenting ministers, ordained for the purpose, among whom less strictness should be observed than among the superior clergy, extemporary prayer to some extent allowed. . . ." The dissenting ministers, we suppose, are to be caught in some scientific trap, and ordained by main force! It would be a grand sight to see Mr. Spurgeon held down by two policemen, while the bishop laid hands on his head. And the notion of allowing to the inferior clergy a licence of extemporary prayer, which is refused to their superiors, is not worth discussion. Mr. Harris says a serious word about the objections of churchmen to employ the dissenters, but not a syllable about any objection on the part of the dissenters to be so employed. On the whole, we pronounce this science of civilization a very retrograde affair.

Notice to Quit. By W. G. Wills. 3 vols. (Hurst & Blackett).—This is an excellent novel—pleasant to read; and the moral thread that runs throughout is delicately spun, and not too obtrusive. There are sketches of real events, which are very well done,—the description of the making of the railway between Manchester and Liverpool, and the account of the draining of Chat Moss are very spirited. Mr. Gowan, the old stoker, who has become rich and dabbles in engineering patents, is a racy Lancashire sketch taken from the life,—his rivalry with George Stephenson, his geniality and rough good nature, his energy and natural talent, are all true to the type; he looks like one of the old Norse giants. Mr. Bröne, the man of genius, with his real talent, and the vein of hollowiness that underlies all his moral qualities, the touch of falseness that makes all his intellectual qualities worthless, is well contrasted with the stubborn rectitude and strong veracity of Surgeon Heath. The triumphant success of Bröne, and the heavy cloud of misunderstanding, calumny and poverty which Surgeon Heath has to encounter, his silent, generous unselfishness, and the wily, calculated ostentation of Bröne, who continues to reap the advantage of all that Heath does, is a good representation of the problem of Life, which struck King David as so hard, and on which he pondered till he was tempted to say, "surely I have cleansed my heart in vain and washed my hands in innocency"; but the career of both men is worked out to the end; and then it is seen that even if it were to bring no world of success, still, that a wise man would choose to be honest! This is not set forth in a homily, but unobtrusively shown in the natural progress of the story. The book is full of incidental scenes and sketches, which are excellent. The drawback to the volume lies in a certain dryness and harshness of style which are not pleasant; the reader feels this, without at first discerning the cause. Style is not everything; there are other qualities that rank before it; but style goes a great way to make a book pleasant reading. 'Notice to Quit' is a great improvement on the author's last work, 'Life's Forebodings.'

A Voyage to Naples: Scenes of Neapolitan Life—[Un Voyage à Naples, par Mad. la Comtesse de Bas-

sanville]. (Paris, Brunet).—This is one of the fry of French railway books which the new conditions of the time have called into being; and it is a volume of foreign travel. It is hard to make little of Naples—but no one is so competent to the task as a French lady. This one writes of the oldest of old things, true or untrue, in the palest of pale ink. Maccaroni, the evil eye, the lazzaroni, the lottery, the absurd English tourist (with a sentimental history of *Sir Bull* and a shirtless, shoeless *Tuo*, filling many pages), Saint Januarius, Vesuvius, Signor Mercadante (who, she says, pronounces Signor Rossini to be the God of Music), and Masaniello,—a celebrity, we are assured, totally unknown to the fishermen and those who sing ballads till the embargo was taken off the performance of M. Auber's 'La Muette' a couple of years since come, in due course. All French ladies bound for Naples are hereby apprised that Madame de Bassanville's book has nothing in it. It would be dear at a *sou*, were it laid in by way of provision against the tediousness of a flight to Fontainebleau.

Recollections of the Expedition to China: a Voyage to Peking—[Un Voyage à Pe-kin, par Georges de Kéruléc, attached to the Extraordinary Embassy from France to China, 1860-1861]. (Paris, Brunet).—Here is another single volume of travel; and, inasmuch as a clever gentleman who has seen service in China is inevitably better company than a frivolous Parisian lady, who has only a corner of Paris by heart, it is as welcome as is bread (with a relish) when tasted after some dry sup of lime or orange-flowers. M. de Kéruléc adds little to what we knew of the details of the Allies' triumph over the Celestials; throws no new sad light on the story of the terrible fate of the French and English victims; he gives his own Ambassador precedence over Lord Elgin in point of the courtesies due on such an occasion, as a French *attaché* should do; but his book is one which may be read without weariness, even by those who may not care to keep it when once the reading is over.

We have on our table—new editions of *The Valley of a Hundred Fires*, by the Author of 'Margaret and her Bridesmaids,' which Messrs. Hurst & Blackett have added to their 'Standard Library,'—and Dr. Dickson on *The Principles of the Chrono-Thermal System of Medicines, with the Fallacies of the Faculty* (Simpkin).—The reprints, since our last announcements, include *History, Opinions, and Lucubrations of Isaac Bickerstaff*, from the 'Tatler,' by Steele and Addison, with Introduction, Notes, and Illustrations by H. R. Montgomery (Longman).—Volume VIII. of the reprint of *Punch* (Bradbury & Evans).—*Lyra Anglicana: Hymns and Sacred Songs*, collected and arranged by the Rev. R. H. Baynes (Houlston & Wright).—from 'Fraser's Magazine,' *Homœopathy: a Letter to J. S. S., Esq.*, by Sir B. Brodie (Parker).—from the 'Dublin Evening Mail,' *University Education in Ireland in the Year 1860* (Longman).—from the 'Darlington Times,' Mr. Marson on *Compulsory Vaccination*.—and from the 'Levant Quarterly Review,' *The Warnings or Warnings: an Historical Disquisition*, by Hyde Clarke (Quaritch).—Our second editions consist of Dr. Luther Holden's *Manual of the Dissection of the Human Body* (Churchill).—*Zeland Directory and Guide*, compiled by W. R. Duncan (Aberdeen, Davidson).—and *Liturgical Purity our Rightful Inheritance*, by J. C. Fisher (Hamilton).—Third editions of *Annals of the Tractarian Movement from 1842 to 1860*, by the Rev. E. G. K. Browne (Daly).—*The Act to Amend the Law relating to Bankruptcy and Insolvency*, by B. Peverley and C. Hatt (Houlston & Wright).—and *Fragments of Truth: being the Exposition of several Passages of Scripture* (Edmonston & Douglas).—And a fourth edition of Mrs. Jameson's *Memoirs of the Beauties of the Court of Charles the Second, with their Portraits* (Bohn).—We have before us *Almanacs and Year-Books for the year to come*:—*De La Rue's Red-Letter Diaries and Improved Memorandum Books*.—*Letts's Diaries*.—*Cassell's Illustrated Almanack*.—*Johnson & Shaw's Farmer's Almanack* (Ridgway).—*Thorley's Farmer's Almanack*.—To these we must add—Volume I. of the new series of the *Transactions of the Ethnological Society* (Murray).—and No. XXVIII. of 'Historical Tales,' containing *Rose and Minnie; or, the Loyalists: a Tale of Canada* (Parker).

LIST OF NEW BOOKS.

All About It: or, History and Mystery of Common Things, 1/6
Archbold's Law and Practice of Arbitration and Award, 12mo. 5/
Arendt's Aide to the Study of Roman Law, 8vo. 3/6
Bailey's International Policy of the Great Powers, 8vo. 6/4
Bain on the Study of Character, 8vo. 9/
Baker's Book of Bible Geography, 4th edit. 8vo. 1/6
Beecher's Royal Truths, 12mo. 3/6
Bessie and Jessie's Second Book, folio, 2/6 bds.
Blanche Cleveland; or, the Rain and Sunshine of Youth, 8vo. 12/
Brownlow's History of the Church of God, A.D. 31-168, 8vo. 3/4
Carnegie; or, the Victim of Khondistan, 8vo. 3/6
Cassell's Illustrated Family Paper, Vol. 8, new series, 4to. 4/6
Children's Picture-book of Animals, 12mo. 3/6
Christmas with the Poets, illustrated, new edit. royal 8vo. 21/
Cockayne's Spoon and Sparrow, Flanders and Passer, 8vo. 10/6
Cooke's Manual of Structural Botany, illust. 8vo. 1/6
Dalton's Daily Prayers for Family Worship, 8vo. 3/6
Dean's New Moral Book of the Gospels, 8vo. 2/6
De Liefde's Postman's Bag, and other Stories, 12mo. 3/6
Edgar's Cavaliers and Roundheads, 8vo. 5/6
Favourite English Poems of Modern Times, illust. new edit. 21/
Garden Oracle and Economic Year-Book, 1862, 12mo. 1/6
Gode's Greek Grammar for the Use of Schools, 4th edit. cr. 8vo. 4/
Gem A B C, royal 8vo. 1/6
Glorious Gospel of Christ, by Author of 'God is Love,' 8vo. 5/4
Good Words, edited by Dr. Maclod, Vol. 2, royal 8vo. 7/6
Greene's Winter and Summer at Burton Hall, 8vo. 3/6
The Christian Church and Society in 1861, cr. 8vo. 2/6 bds.
Guy's (Joseph) Tutor's Assistant, 30th edit. 12mo. 2/6
Hensley's Prayer of Prayers, 8vo. 4/6
History of a Pin, with Illustrations by Ross, 8vo. 3/6
History of a Ship from her Cradle to her Grave, new edit. 12mo. 1/
Home Tutor, The, 12mo. 3/6
Jackson's Medical Climatology, crown 8vo. 12/
Kemp's Exercises in Latin Syntax, Part II, cr. 8vo. 8/4
Kingsley's Town and Country Sermons, 8vo. 6/6
Kingston's My Travels in Many Lands, 12mo. 4/6
Last of the Mortimers, by Author of 'Margaret Maitland,' 21/6
Maclod's Gold Thread, cheap edit. 12mo. 2/6
Marshall's Happy Days at Fernbank, 8vo. 2/6
Marshall's Old Vauxhall, 3 vols. post 8vo. 31/6
Mendip Annals, edited by Roberts, new edit. 12mo. 4/6
Mendip Words of the Homestead, Vol. 2, royal 8vo. 1/6
Ministerial Recollections, with Preface by Rev. A. W. Brown, 25
Orleans (Duchess of), Reminiscences of, by Von Schubert, 7/6
Powers's Beatrice Langton; or, the Spirit of Obedience, 8vo. 2/6
Richmond's through Life and for Life, 8vo. 3/6
Roberts's Plain Sermons to a Village Congregation, new series, 12
Sentences from the Works of Author of 'Amy Herbert,' 2d ed. 2/
Shakespeare's Songs and Sonnets, illust. by Gilbert, 42/
Sketches from Pictures: Lays of Better Land, & other Poems, 5/
Spencer's The American Union, its Effects on National Character
and Policy, 8vo. 10/6
Stewart's Lady's Return, and what came of it, 8vo. 3/4
Thomson's Celebrated Friendships, 3 vols. cr. 8vo. 21/
Turner (J. M. W.), Life of, by Thornbury, 3 vols. 8vo. 30/
Vessels and Voyages, new edition, 12mo. 1/6
Wagner's Widdowings of the Children of Israel, cr. 8vo. 6/4
Winslow's Help Heavenward, new edit. 12mo. 3/6

NOTES ON THE HISTORY OF PERSPECTIVE

(No. V.)

November 13, 1861.

Gerard Desargues (1593—1662), whose name and fame have been revived in our own day, commonly called the *Sieur Desargues*, had the misfortune to be a man of some rank and property. He was too easily disgusted by the opposition of plebeians, and retired to his estate at the moment when he should have maintained his ground; leaving his works to be digested and published by a well-known engraver, Abraham Bosse. The consequence is that from his death to our own time Desargues was as obscure as any *Sieur* in his neighbourhood; as obscure as Bosse is pronounced to have made his works. All that Montucla has to say is that these works would have been good if the engraver had not turned them into masterpieces of barbarism in language and of plat prolixity in method. I can only object that, judging by a certain Appendix which I shall have to note, added by Desargues himself, and by some other things, Bosse, though more lucid with his burin than with his pen, is not so obscure as his principal.

Desargues had a power in geometry which places him, with Pascal, at the head of his time. It was he who gave impulse and direction to the genius of his young friend, as Pascal acknowledges in terms of the greatest strength. And this is corroborated by the style of Pascal's discoveries in conic sections, which is closely that of Desargues. The two must be held to be the remote ancestors of that school of projective geometry of which I spoke in the first chapter of these Notes. Desargues was disinterred by Poncelet, in his 'Propriétés Projectives des Figures,' 1822, a work which is one of the most marked expositions of the connexion between perspective and geometry. It was a piece of good fortune for the subject that the author found a prison in Russia and not a grave; in that prison, he says, his researches were undertaken. Poncelet calls Desargues the *Monge* of his day: true as to power, but not as to clearness.

Desargues published some slight works on perspective, 1636—42, of which no copy can now be

found: but it can be collected from Bosse that they contained the fundamental parts of his method. He also occupied himself with the *coupe des pierres*, the construction of drawings from which to cut stones for architecture; and a work on this subject was published by Bosse in 1643. He was the first who introduced sound constructions, free from trial, into this branch of application: the merit of his method is now fully acknowledged. There was then in existence, as now, a class of persons who delight in *styling themselves* practical, who may in our day be detected by the words "I am a practical man" placed before a bit of unsound theory. The members of this class set themselves against the new methods, headed by one Curabelle, who was geometer enough to have been a good follower of Desargues if he had had the sense, and by Beaugrand, secretary of the King. Both wrote against Desargues; and Beaugrand had influence enough to procure a prohibition to Bosse from teaching Desargues's perspective at the Academy of Painting. This fact, elsewhere stated, seems to be confirmed by a passage in Curabelle's tract of 1644, in which it is stated that, since Beaugrand's publication in 1642, "le public est privé des dites leçons de ténèbres." It has been suspected that Desargues had published a tract under the title of 'Leçons de Ténèbres': but, independently of the great unlikelihood of such a title, it is difficult to see how the public is deprived of a book by the appearance of another book in answer: it has not been so with 'Essays and Reviews'! I shall make two uses of Curabelle, and then dismiss him.

First, the quotation above is in reference to an imputed disparagement of Apollonius, as follows. A sentence of one of the lost works of Desargues (of December, 1642) is cited, in which he says that he will give the key of a certain process "quand la démonstration de cette grande proposition nommée la Pascale verra le jour." He goes on to say that the first four books of Apollonius are all either cases or consequences of this great theorem. This gives the fact that the theorem was known to geometers, and had gained its discoverer's name, in 1642, when Pascal wanted six months of twenty years of age. Curabelle, who does not understand the allusion, says he will refer the interpretation of it to the pleasure of his reader. He did well: and his latest reader knows that much more than four books of Apollonius is contained in this omnivorous theorem, and fully believes that it will one day be recognized as the best foundation for the geometrical study of the conic sections.

Secondly, Curabelle upsets, if more upsetting be wanted, the story of the word *cabal* being an acrostic of ministers' names. Desargues offered to defend his methods before competent judges: he demanded geometers assisted by stonemasons; his opponent would have none but stonemasons. Curabelle says that Desargues insists on being tried by men of his own *cabale*.

As there is every possible confusion about the accounts of the works of Desargues, I will merely state, without attempting any account of the whole, that my personal examination extends to four books written by Bosse from his materials:—1. An English translation of the work on Dialling of 1643, by Daniel King in 1659. King calls his author De Sargues; and Watt has mention of the book under "Sargue, De," the only one I ever saw. 2. *Manière universelle de Mr. Desargues pour pratiquer la perspective*. . . Paris, 1747, 8vo. 3. *Moyen universel de pratiquer la perspective sur les tableaux ou surfaces irrégulières*. Paris, 1653, 8vo. 4. *Traité des pratiques géométrales et perspectives enseignées dans l'Académie Royale*. Paris, 1665, 8vo. The second work, which contains all I have to refer to, is dated 1648 by all modern French writers; older writers give 1647. There must have been a new title-page in 1648. The work closes at page 310; pages 311–320 seem to be the substance of a tract of 1643, now lost; and pages 321–334 the substance of a tract of 1636, now lost. Then follows the addition to which I have alluded, which is in some copies only, according to Poncetlet.

In the general plan of the work the great feature

is the reduction to system of throwing off distances from the picture along the ground. Desargues forms an *échelle fuyante*, as he calls it, being a perspective scale of successive equal distances on a line drawn to the point of sight. In every example the foreground is covered with equal squares by this scale: which strikes the eye so prominently that several writers have described this use of squares as being the whole of Desargues's system. But examination finds given a method of dividing any horizontal line whatever, done in such a manner as Brook Taylor afterwards employed. And the first supplement (pp. 311–320) considered as too high for the run of practitioners, and addressed "aux Théoriciens," contains many details of a higher character, without novelty of principle, which must be divided between Guido Ubaldo and Desargues by attentive comparison of both.

But the greatest advance made by Desargues, in the introduction of new power, is the universal method of dividing a line perspectively, which is very obscurely given in the addition. So obscurely, indeed, that it may well be doubted whether any one of his time ever learnt from it. M. Chasles, the first person, I believe, who ever pointed it out, says that Desargues employs a proposition of Pappus. I had the advantage of being obliged to make out the meaning of the whole before I found M. Chasles's remark: and I should describe it as a method of arriving at the result without seeing the proposition of Pappus, of whom, I suspect, very little was known or read at that time.

The theorem given by Desargues, obscurely as it is put, might have led to a mode of viewing perspective which is now not very common, and ought to be universal. From the very beginning all manner of planes were thrown upon the plane of the picture. Had it so chanced that the maxim of one thing at a time had been introduced, had the study of throwing *one plane only* upon another preceded that of dealing with several planes at once, it would then soon have been discovered that *once a picture always a picture* is true to the following extent:—

Let any figure M be in a plane A, and let it be perspectively thrown upon another plane P into the figure N. Let E be the place of the eye, and let Z be the line in which the original and picture planes intersect. Let the picture plane P make any amount of revolution about Z: the figure N is no longer the picture of M if the eye remain at E: but let the point E revolve about the point of A nearest to it as much as P has revolved about Z, and N, in its new position, is a picture of M to the eye in its new position. If figures in different planes be thrown upon P, the same result cannot be produced. And the result remains true, as to geometrical properties, even when the picture plane, P, revolves into coincidence with the original, and all optical notion of a picture is lost. This extreme case is the foundation of a remarkable geometrical section of the subject: and it is a striking coincidence of discoveries that Desargues gives one of its theorems in the same addition in which he gives what might make any one suppose he had the *revolving picture* in his head. But I am wholly unable to discover this notion in his demonstration, which depends altogether upon composition of ratios.

In the revolving picture the vanishing points of all lines remain unaltered, except as they revolve with the rest. And the following theorem might have been the final statement of Desargues's reasoning. If A, B, C, be any points on a picture line of which the vanishing point is V, the original lengths which are pictured—when they are diminished we say *foreshortened*—into AB, BC, have a ratio which depends, be the eye where it may, only on the ratios of VA, VB, VC, to one another. And the fraction which the original of AB is of the original of CB is found by multiplying the fraction which AB is of CB by the fraction which CV is of AV. Desargues proves the first part of this, namely, that change of the eye-place does not affect the picture ratio of a given original ratio, so long as the vanishing point remains unaltered. He sees clearly what he has got; he heads it, 'Proposition fondamentale de la Pratique de Perspective'; he announces its universality; and he points

out how it includes the cases he had previously given. But he does not give the least hint that I can discover of any of the simple ways of arriving at the same result: the revolving picture, Brook Taylor's method, or the proposition of Pappus, would either of them have answered the purpose.

Should any one ever undertake a detailed history, he ought carefully to examine the works of the seventeenth century with reference to their management of perspective division. In the Jesuit of 1651 (second edition), and Gualtier of Anjou, of 1648, we have writers who might have profited by Desargues: but I cannot find any trace of their having done so. I was struck for a moment by a chapter in Dubreuil on the 'Ouvrages de Bosse,' but I found there were other Bosses besides Abraham. The word means sculpture, and often *relief*: though *demi-bosse* is the proper term for this last.

We have seen how quickly and how well Viator was caught up by the encyclopedist of his time. The ancestor of all our modern encyclopædias, the first of the name, the 'Scientiarum omnium Encyclopædia' of Alsted, was published in four volumes folio in 1629, and was compiled after the publications of Guido Ubaldo and Stevinus. But Alsted was not so well abreast of his time as Reisch or his editor. I extract every word about perspective which I can find:—

Sciagraphia est quæ, architecti extracturi aliquid, animo preconceptum molem, et intra se formant, adeoque futurum opus adumbrant. *Ichographia* est areæ jacentis descriptio, futuri operis specimen exhibens: quæ majorem operi conciliat symmetriam et concinnitatem, nec non facit ne aliquid superflui ingenti sumtu sine usu pereat. Hoc enim cum primis incumbit architecto, ut cum extruendum opus suscipit, quanto id sumtu futurum ostendat. Quæ de re lex fuit lata Ephesi, ut refert Vitruvius lib. 10. Si enim plus consumtum erat, quam indicasset, pecunia ipsius periret. Quæ lex si hodie postliminio revocaretur, non ita male audiret architectonica.

I copy from the reprint made at Lyons in 1649, near which town Desargues was then living upon his estate: we may imagine him turning over the leaves in the publisher's shop to see what was said about his favourite art. It appears that perspective, under the word used by Stevinus, *sciagraphia*, or shadow-drawing, is set forth as a something by which the architect preconceives or shadows forth his plan. The *ichographia*, which meant a ground plan, is a kind of specimen of the ground plan, partly with a view to an estimate. To which it is added that architecture would be in better odour if the old Ephesian law were revived. Vitruvius calls this law hard, but not unjust. The architect of a public building was to hand an estimate (*æstimatio*) to the magistrate, for which his goods were made surety. If he did not exceed, he received public honours; if he exceeded by not more than twenty-five per cent., no penalty followed; if by more, his goods were made answerable for the surplus. Vitruvius wishes the immortal gods would give that law to Rome for private buildings as well as public, that fathers of families might build without being obliged to leave off in the middle, *fractus rebus et animis*. If then there be anything new under the sun, it is not the tendency of an architect to exceed the counted cost: neither is it the tendency of an encyclopædia to exhibit inequality ranging from trivial nonsense to well-digested learning.

A. DE MORGAN.

SCIENTIFIC NOMENCLATURE.

ALTHOUGH agreeing in the main with the remarks of your Correspondent "C. W. M." on scientific nomenclature, I must take exception to that part of his letter in which he attacks the chemical philosophers. He sets out with the dictum, "Science is not for the idler." He must forgive me if I add a rider to it,—"Chemical nomenclature is not for the superficial." It is singular that he should find such fault with the only science amongst those which he aptly terms sciences of observation which possesses a perfectly intelligible and logical nomenclature. Chemical nomenclature, as founded by the immortal Lavoisier, is governed by a fixed principle, which ordains that every name shall express the composition of the substance for which it stands. An adept in chemical science knows at once the exact chemical composition of any body from the formation and termination of

the name given to it. The word "methylethyl-amylophenylammonium," which appears so unintelligible to "C. W. M.," is as easily remembered and understood by a chemist as "light blue, ruled, foolscap paper" would be by an ordinary individual. In this, chemical nomenclature stands in favourable contrast to that adopted by botanists. Such cacophonous epithets as "*Bogglesia Wigginsii*" simply afford the information that the plant so designated was discovered by the illustrious but mythical personages Boggles and Wiggins, without giving the smallest clue to its properties or character; but the term "Bichloride of rubidethyl," although just as imaginary, is the name of a substance, of certain composition, which may or may not be discovered some day. As to the synonymes possessed by a very few chemical substances, it is the manufacturers and workmen who are the perpetrators of errors. Mere vendors cannot be posted up in the known composition of their wares. They are asked for spirits of salt, and they sell it. Ask them for hydrochloric acid, and they stare at you. As chemical science advances, names must necessarily change; but if "C. W. M." will examine the standard chemical works of the last twenty or thirty years, he will find but few alterations. The principal changes in this way are additions, and not substitutions. When a new element or radical is discovered, a name is given to it descriptive either of its source or of some salient property. For instance, Bunsen has lately discovered two new metals, cesium and rubidium, by means of spectral analysis. Their names have been given to them from their forming blueish (*caesius*) and ruby lines in the spectrum. "C. W. M." is mistaken in saying that organic chemists call sulphates thionates. Sulphur compounds of the thionic series are inorganic substances, and are quite distinct in their composition from sulphates. Chlorhydric acid is simply the French form of hydrochloric acid; the difference in the two words being euphonic, and not theoretical, as in the long-abandoned name—muriatic acid. As to "hydrachlora," I fear it is only the invention of an enthusiast with a theory and nomenclature of his own. The proposed substitution for the ammonium compound must, I fancy, come into the same category; but, not having seen the article mentioned by "C. W. M.," it would be wrong to speak positively. "C. W. M." deserves the thanks of all scientific men for having stirred up this subject; and I trust it will be the means of calling forth many more remarks from abler pens than mine.

In conclusion, I beg to assure "C. W. M." that I make these explanations with perfect good humour, and only hope that he will be induced thereby to study chemical nomenclature a little more closely. He will soon see the beauty and intelligibility of such apparently absurd words as "ethylomethylpropylamine," and a host of others. C. W. Q.

THE NEW OTHELLO.

M. Fechter's 'Acting Edition of Othello' has produced a pamphlet by a Mr. Otley, in which that version is "critically analyzed, with prefatory observations on the stage, the audience, and the critics." Thus, "a very pretty quarrel" is springing up, one which was to be anticipated; and, foreseeing which, we stated that M. Fechter had provoked a contest by his unreserved denunciation of tradition. Yet, curiously enough, the strongest point that Mr. Otley has made against M. Fechter relates to an instance in which the latter has adhered to the usage of tradition in his stage-arrangements. It occurs in the third act, the great scene wherein Othello is tempted by Iago, which in the folio is described as carried on in the open air, as, also, is the continuation of it in the fourth act. But, in this stage edition the poet's arrangements are altered, and the action takes place, in both instances, in the interior of the castle. Now, this change naturally gives rise to social improprieties which are chargeable altogether on the stage-manager, and not on the dramatist. M. Fechter adopts the ordinary arrangements, but restores some passages which the players had omitted as evidently inconsistent with their plans. These concerning Bianca are among the number;

and her presence intensifies the improprieties which they occasion. The idea formed by Shakspeare is, that Desdemona meets Cassio in her walks. He never assumed that Cassio would have had the temerity and indiscretion to enter the castle, or that Desdemona would have admitted him to her *boudoir*, while engaged in working embroidery. He never imagined that Bianca would have had such free access to this apartment, and that she should there meet with Cassio. Much less did he imagine that Cassio would be found there as a matter of course. The upholstery of the apartment, according to Mr. Otley, increases the impropriety. "When M. Fechter makes the meeting take place in one of the most private apartments of the castle, and makes the intruder pass off to another inner apartment, Emilia (according to M. Fechter's stage-directions) 'drawing the tapestry on the left to give passage to Cassio,' and, when we find, only a few sentences on, that Othello conducts Desdemona to depart through the very same tapestry, the whole arrangements become marked with a questionable character, replete with irreconcilable suggestions which it is impossible to resist." Mr. Otley further urges, in not greatly improved English, that "not merely upon grounds of consistency with the letter of the text, but of common decency, was it the more incumbent upon M. Fechter to keep the action outside the palace, restoring, as he does, the scenes between Cassio and Bianca, the courtesan. The accidental meeting between the two in the open air was probable and natural enough." Let us hope that in future performances of the play the scene will be enacted according to the intention of Shakspeare himself.

Mr. Otley, however, in seeking further grounds of accusation against M. Fechter, goes beyond the mark. He says—

"For a woman of the class of Bianca to force herself into the governor's castle, and, above all, into his wife's apartment, is repugnant to every dictate of reason and propriety;—yet M. Fechter makes her do so, and gets rid of her—not in the easy and pretty discourse provided by Shakspeare, in which a show of tenderness and vain regret on the one part, and of apologetic and gallant attention on the other, are nicely mixed; but after the coarsest possible fashion, which shall be described in the words of the new 'Acting Edition'—

BIAN. Leave you! Wherefore?
CASS. I do attend here on the General,
And think it no addition, nor my wish,
To have him see me woman'd!"

Who would not have imagined from Mr. Otley's remark, that this little piece of dialogue was invented by M. Fechter? It is, nevertheless, Shakspeare's own—every word of it, without alteration. Perhaps, the critic's remarks apply to the stage-directions that follow; but in that case, he should have said so. With the same recklessness, Mr. Otley censures M. Fechter for omitting the splendid simile of "the Pontick sea,"—a simile which is scarcely ever spoken on the stage. Sometimes Mr. Otley's printer is at fault. For example, he prints a well-known speech as follows:—

If after every tempest come such calms,
May the wind blow till thy horn wakened death!
—instead of "winds," and "they have." If this mistake had been made in the folio, what a world of comment would it have occasioned! and which of our commentators would have hit upon the right reading?

M. Fechter is not infallible, of course; and he has acknowledged this by not carrying out all the stage-directions set down in his book. In making such directions he has only followed the example of eminent English performers who, in their spectacular revivals, have been accustomed to re-edit the prompt-book of particular plays in accordance with newly-invented stage arrangements, and have subjected the companies under their control to the disagreeable process of drilling. Macready, Phelps and Charles Kean have alike been guilty of this offence,—if offence it really be. In contriving new stage arrangements for a picturesque representation of 'Othello,' it was necessary to make various alterations in the ordinary business. English actors do so, but Mr. Otley absurdly thinks that a foreign actor takes an unwarrantable liberty in availing

himself of the privilege. This position manifestly involves a previous question, namely, should he be permitted to act Shakspeare at all on an English stage? Mr. Otley, if we understand him rightly, does not object to M. Fechter's having performed Hamlet; and if so, he concedes both positions. The same international feeling which allowed his appearance at all, would not deny to him the full advantages possessed by a leading English actor on whom his manager had conferred the responsibility of such an original getting up of a favourite tragedy as to present an old work with novel attractions.

One statement made by M. Fechter requires especial remark. "Shakspeare's plays," he says, "were certainly written to be acted,—not recited." It was, perhaps, imprudent in him to thus insinuate that English actors had hitherto only recited, not acted, Shakspeare; that he was going to do the latter, and that they might learn from him how the thing was to be done. But the terms admit of explanation. By acting, M. Fechter means impersonating a character so as to produce an individual reality, as is frequently done in melo-drama, and imitating the manners of ordinary life so as to assimilate the action to our daily experience. Now this implies a wide controversy, particularly in relation to Shakspearian characters (such as 'Othello'), which are eminently ideal, and involve, as Coleridge has said, "the universal in the individual." A certain degree of abstraction is, therefore, allowed to the actor, who is not compelled to creep by the light of his understanding alone, but may soar on the wings of imagination and passion to heights where mere intellectuality cannot follow. The elder Kean, in this very character of Othello, did this; and when so enrapt by the poetic spirit, the spectator knew not whether he was being carried. Now, this in England we are accustomed to regard as acting of the highest sort, not the mere copying of conventionalities, whether in regard to the scenic appliances or the individual identity.

OUR WEEKLY GOSSIP.

Dr. Hook's new volume of 'Lives of the Archbishops of Canterbury' will open with the Norman period of our Church History, a period contrasting strongly with the Saxon, which he treated with equal skill, taste and judgment in his first volume.

At Messrs. Smith, Elder & Co's. Trade Sale, on Tuesday, the leading books went off well. We find that 1,100 of the 'Selections from the Writings of Mr. Ruskin,'—1,200 of Thackeray's 'Four Georges,'—1,800 of his 'Lovel the Widower,'—1,500 of Mr. Trollope's 'Framley Parsonage,'—and 750 of Leigh Hunt's Correspondence were sold.

The first of the series of Lectures to Working Men, at the Museum of Practical Geology, in Jermyn Street, was delivered on Monday evening, by Dr. Percy; the subject was 'The Metallurgy of Copper and Zinc.' Five others 'On Metals,' by the same distinguished lecturer, will follow, to complete the first series. The lectures of the second and third series will have for subjects, 'On the First Principles of Chemistry,' by Dr. Hofmann, and 'On Natural Philosophy,' by Mr. Tyndall. These audiences of intelligent and inquiring working men are said to be the most attentive ever addressed by Professor.

Paternoster Row is about to possess its architectural feature, like some other of our streets. On the buildings lately occupied by Messrs. Longman, & Co., and their neighbours, the Messrs. Blackwood, a new and spacious edifice is to be erected for the former firm, which will combine beauty with convenience. In the mean time, the Messrs. Longman occupy the building on Ludgate Hill, formerly known as the Milton Club.

The Subscription to the Shakspeare Fund, established by Mr. Halliwell, has reached 2,706*l.*

We hear, from the West, that the Locke Memorial, in honour of the great philosopher, is on the eve of completion.

In the obituary of this week is the name of Sir Howard Douglas, son of the sea hero who first suggested, it is said by all except the supporters

of Mr. Clark's claims, the idea of breaking the French line of battle, and thus helping Rodney to a victory. Sir Howard, born in 1776, entered the Army when a boy, and, after adding to its glory as a soldier through a long course of years, served it by his pen even after he was an octogenarian. From the period of the Peace, in 1815, that pen became as active as his sword had been previously, and it was wielded earnestly, and often successfully, in behalf of the Navy as well as of the Army. In all these writings Sir Howard had the honour, happiness and security, of his country in view. His suggestions for the securing these good ends were acknowledged as most valuable by successive Governments, who lauded his theories, and declined, of course, to give them practical effect. As the hour of apparent danger approached, administrations became more tractable; and though Sir Howard was not always a true prophet, his far-sightedness and his sound sense were fully acknowledged; and the old soldier and patriot had the gratification of seeing measures adopted for the security of the nation which he had earnestly recommended, only to find the recommendation treated with polite neglect.

Geoffroy St. Hilaire, the illustrious son of an illustrious father, both naturalists,—died, this week, in France. From a child, he followed in his father's footsteps, and perhaps went further than was necessary when he set aside the classification of Cuvier for one more complex of his own. A list of his written and published works on subjects of Natural History would fill one of our pages. He was the founder and President of the Society of Acclimatization in France; one object of which was the introduction from other countries, of animals that might be rendered useful in France. To the last, M. St. Hilaire advocated the use of horse-flesh as food, eating thereof himself at public dinners, as a voucher for his sincerity. He died in his 56th year, and is in no wise to be connected or confounded with a certain Marco de St. Hilaire, who wrote on some very natural subjects too, but neither in the vein of a philosopher, nor on subjects a philosopher would condescend to handle.

The Copley Medal, in the gift of the Royal Society, has been awarded by the Council to the celebrated Agassiz, thus setting the seal to the opinion which has so long prevailed of the merits of the distinguished Professor. It is to be regretted that the date at which the Council necessarily make their decision, does not afford time for him to be present to receive the medal in person, at the Anniversary Meeting of the Society on St. Andrew's Day. One of the Royal Medals has been awarded to Dr. Carpenter, F.R.S., for his researches on the Foraminifera, into the Structure of Shell, and the Embryonic Development of Purpura, besides his other works on Physiology and Comparative Anatomy. The other Royal Medal is awarded to Prof. J. J. Sylvester, F.R.S., of the Royal Military Academy, Woolwich, for his important contributions to Mathematical Science. Papers by each of the two last named gentlemen have appeared in the *Philosophical Transactions*.

The Taylor Scholarship of 20*l.* or upwards, which may be held for a second and third year, provided the student shall produce in each year, a work of sufficient merit, has just been awarded by the Royal Dublin Society, after competition, to Mr. Henry Crowley, nephew of the late N. J. Crowley, Esq., R.H.A. The scholarship is the chief of several prizes left by the late G. A. Taylor, Esq., of Dublin, for the encouragement of Art in Ireland; and, by the terms of the bequest, can only be awarded "when high artistic talent shall be manifested."

From the eighth Annual Report of the Librarian to the Bolton Free Library, we find that in that comparatively small town there has been read, during the past year, 109,820 volumes, and that upwards of forty thousand artisans, labourers, cotton-mill operatives and others, have been readers, to a large extent, in history, biography, arts and science, theology, voyages and travels, &c. These readers, when they come up to the Great Exhibition of 1862, will, probably, be astonished to find that in London there is not a single Free Library.

The following may fittingly close the correspondence respecting Doré's Dante. Mr. Turner, the London agent of Messrs. Hachette & Co., says:—"The statement in your paper of the 19th ult. was to the effect, that a Correspondent having bought a copy of the book for 5*l.*, applied for a reduction of an overcharge, arising from a subsequent advertisement of the book; that the overcharge was admitted, and that an offer of 3*s.* was made for the difference, amounting to 20*s.* The letter in your number of to-day, while it is but *ex parte*, gives a very altered complexion to the matter. An allowance to a bookseller of 3*s.* on a book sold at 3*l.* 18*s.*, and afterwards reduced (in consequence of the abolition of the paper duty) to 3*l.* 15*s.*, differs very widely from an offer of 3*s.* on one sold at 5*l.*, and afterwards reduced, according to your statement, to 4*l.* The trade price for Dante's *Inferno* was originally 3*l.* 18*s.* At that price the book was subscribed, and at that price the copy in question was bought in August. Owing to the abolition of the paper duty on the 1st of October, the full benefit of it was given to future trade purchasers by a reduction of 3*s.* The weight of the book being 14 lb., and the duty on it, at 16*s.* per cwt., 2*s.*, the allowance in this case was in excess of the claim rather than *vice versa*, as implied; and, further, as the book was supplied in August, a refusal might very fairly have been urged on account of the duty having been paid on it; but the allowance was at once conceded to meet the complaint. The truth of the matter is, then, that I credited 3*s.* for no founded claim at all, rather than, as so very equivocally put, 3*s.* for a just one of 20*s.*"—So far, Mr. Turner. Meanwhile, a complaint reaches us from another quarter:—"I wish to confirm what 'A Subscriber' says in reference to Messrs. Hachette's Dante. I paid 5*l.* for my copy, which, I learnt afterwards, was advertised as selling for 100 francs, or 4*l.* I immediately applied to my booksellers for an indemnity, if they could get it from Messrs. Hachette; and they replied that, though the trade price was now such that it could be sold for 4*l.*, yet that it was impossible for them to sell it lower than 5*l.* to me. E. G. CULLING-EARDLEY."

While in London we have gentlemen lecturing to postmen, in Devonshire, a postman has been lecturing in presence of ladies and gentlemen of the county. At Bideford, last week, Mr. Caperne, "the poet-postman of Devon," delivered a lecture 'On Cornwall, its Coasts and Cairns.' When a minstrel lectures, his audience expect to hear the music of his harp as well as listen to the accents of his tongue; and Mr. Caperne did not disappoint his hearers. Sailing round the Land's End, "Rough as the weather was," he says, "we stood at the bow, and while our trusty boat dipped in the trough of the sea and rode the mountainous billows we sent forth this song upon the stormy wind for love of our dear old Isle:—

Leap up, O Sea!
Throw thy rude arms around her neck—
She loveth thee
An orphan child,
And very fair our England is;
And in his lair,
The Vandal wild
Would prey upon her queenly charms,
But cannot dare
For thee, O Sea!
Behold, O Sea!
Enthron'd upon our island rock—
In majesty
She ever smiles;
For well she knows
How sternly thou canst crush her foes,
Amid her isles;
And she is free—
Free as thyself—is the fair rose
Of Liberty."

—A collection of the Devon Postman's Songs has been published: some of them he has set to music himself; for others the music has been composed by Mr. T. Marby.

In the controversy that is now so lively respecting the traditional Othello and that of the innovating Charles Fechter, the writers refer to that gentleman sometimes as a "foreigner," at others as a "Frenchman." He is only either by education; he is neither by birth. He was born about as far east of the Princess's Theatre as Talma was

born west of it, if it be true that Talma was born in Holles Street. But Talma's parents were French, and their native country was his. M. Fechter is not French in this sense, his father being, we believe, a native of Germany. By education, indeed, the son became French, and he is likely to display some proofs of the soundness of that education, by producing at the Great Exhibition of 1862 samples of his craft as a sculptor. The school of sculpture was the first in which he underwent training as an artist, and is the one in which he profitably passes his few hours of leisure. As a profession, sculpture was early abandoned for the stage, where M. Fechter did not reach his present eminent position without severe discipline. He worked, rather than "played" in Italy, before he was known in France; and passed modestly but creditably, half-student half-actor, through the *Théâtre Français*, of which establishment he was a member when he acted with distinction in the French version of the 'Antigone,' produced at the St. James's Theatre. Fifteen years ago, he created a sensation in Berlin, as he is now doing in London, and then returned to France, where critics placed their seal upon his fame, a fame that culminated by his original representation of Duval, in 'La Dame aux Camélias.' On the stage he combines the artist and the actor, as we understand both terms. In the 'Fils de la Nuit,' he paid for the ship whose appearance formed so picturesque a portion of the drama; and in the 'Belle Gabrielle,' at the Porte St. Martin, his too great ardour precipitated him from a height with consequences which endangered his life. Thus, he has played in Italy, France, Germany and England, the last being his native land; "foreign" to it, he became, as we have shown, but it is a misnomer, we think, to describe M. Fechter as a "Frenchman."—We may add, that after the Christmas holidays M. Fechter will play Iago, alternately with Othello.

Hitherto the name of Ternaux has been chiefly associated with manufactures generally, and with that of French cashmeres in particular. But now the nephew of the well-known manufacturer, M. Mortimer Ternaux, has this very day published the first volume of a work which, to adopt a French illustration, will certainly go round the world. Its title is 'L'Histoire de la Terreur,' being the history of France from May, 1793, when the Mountain overthrew the Girondins, to July, 1794, when Robespierre fell, and blood ceased to flow in the old direction. The epoch succeeds that which M. Lamartine brilliantly, if not altogether correctly, described in his 'Histoire des Girondins.' M. Ternaux has made that epoch his particular study for years; and the fruits of such study he is now beginning to place before an eager public. As an author, this gentleman has not been previously known, except by a few pamphlets. From an early age (he was born in 1808) he was employed in various Government offices, and, in 1842, succeeded Marshal Clausel as Member for Rethel. For three years he supported the Ministry of Louis-Philippe; but passed into the ranks of the Opposition in 1845, where his talents secured him a hearty welcome. He accepted the Republic, served it as a Liberal Deputy, but warmly opposed the sanguinary *coup-d'état* of Louis Napoleon, by whom he was forced into a retirement, which he has employed in writing this 'History of the Reign of Terror,' founded on original documents, which, it is said, will shake many a hero now serene on his pedestal.

Intelligence has been received from the Expedition in search of Dr. Vogel, the African traveller. On the 19th of June, the Expedition was at Massawa, where Dr. Mundzinger, of Berne, had joined, swelling the number of members to that of twenty, exclusive of servants. In a few days the party were to start, with fifteen camels and eight mules, for Beren, in the Bogos Country, and pass on through Abyssinia. Several of the Europeans had been taken ill, from the great heat they endured. It was lately stated by Dr. Ule, the originator of the Expedition, that the reports of Dr. Vogel being still alive assumed a more and more definite shape as those sent in search of

him approached the place of his supposed captivity; and it had been determined by the Managing Committee to despatch a second Expedition by the road Vogel himself had taken (*vid* Tripolis, Murzuk and Kuka), which would have for its sole object the discovery and possible rescue of Vogel himself, instead of being made to answer, as the first Expedition, the ends of humanity as well as those of science. For this purpose, it would be composed of only a few individuals travelling in the guise of merchants, and endeavouring to pass without exciting notice.

An interesting paper has recently been read by M. Dumas, before the Paris Academy of Sciences, 'On the New Artesian Well at Passy.' After a series of difficulties, unparalleled in the history of artesian wells, water was struck at the great depth of 577½ metres, but it did not rise to the surface. Further borings increased the flow, and eventually, on the 2nd of October last, the well discharged 20,000 cubic metres of water in twenty-four hours. The well has cost nearly 1,000,000 francs; and, it is calculated, will yield water for the use of 500,000 inhabitants.

A very ingenious process has recently been perfected by M. Faye, by which he is enabled to pierce thick pieces of glass by means of an electric spark. That glass can be perforated by an electric spark has long been known, but M. Faye has now succeeded in piercing extremely thick plates. The results were laid before the last meeting of the Paris Academy of Sciences. No traces of fusion were discernible.

A pamphlet by the Abbé Domenech has just appeared, entitled 'La Verité sur le Livre des Sauvages,' in which we expected to find some cause for modifying the ridicule which has been heaped upon the unlucky Author of the 'Manuscrit Pictographique,' and to which we have before referred. Unfortunately, this is not the case. His argument is something of the following sort:—"None of my critics know anything of American 'pictographie'; therefore it is in the highest degree presumptuous for them to offer an opinion. I have made up my mind that it is a *Manuscrit Pictographique* of the Red Indians, and the only question that remains to be decided is, respecting the German writing, which is easily done,—thus, either the Red Indian learned German from a German missionary, or, perhaps, some German 'enfant volé devenu sauvage' compiled the Red Indian pictographic manuscript." He tells us also that M. de Paulmy, the original possessor, received it, together with an Iroquois Dictionary; and that he himself wrote the title 'Livre des Sauvages,' on its wrapper. It requires, he tells us, a great amount of credulity to believe that a man "d'élite et savant" could possibly have been mystified! The rest of the book is glorification of France and abuse of Germany.

"The daily press will have already told you," writes a Correspondent at Naples, "of the formation in Naples of a 'Philanthropic Association,' to ameliorate, by means of new houses, the position of working men, of the poor, and of those of slender means, under the protection of Victor Emmanuel and the presidency of Prince Umberto. Lately a public subscription was opened for the shares of the first series, the price being 100 ducats each, the municipality guaranteeing 4 per cent. The want of such houses is greatly felt here, and it is not saying too much to attribute to such a want much of the degradation of the lower classes and of the filth of the city. Single gentlemen of small means, whether residents or visitors, would rejoice, too, if that very large and most *disinterested* body, lodging-house keepers, would make some provision for their wants; the fact being that it is as difficult to find a small apartment in Naples as it is to fall upon an honest man. Rome has a vast number of such small *quartieri*, and is therefore full of visitors during the winter; but Naples, alas! has scarcely anything to offer but long suites of rooms, as dear as any that are to be found in London, with gilded cornices and splendid chandeliers, all, of course, dimmed by dirt. It will be long before these people will learn the secret of filling their city by moderate prices and accom-

modation, honesty and cleanliness. The system in universal practice is one of extortion."

EGYPTIAN HALL, PICCADILLY.—Mr. ROBIN, the Celebrated FRENCH WIZARD, will RE-APPEAR in his original SOIRÉES FANTASTIQUES, on the 26th November, with a New Selection of Startling Illusions.

SCIENCE

The Laws which regulate the Deposition of Lead Ore in Veins; Illustrated by an Examination of the Geological Structure of the Mining Districts of Alston Moor. By William Wallace. (Stanford.)

Of the hundreds of excursionists who may be found on fine summer holidays stealing an interested look at the long lines of hungry pensioners dining at Greenwich Hospital, or afterwards exchanging a word or two with those loquacious old sons of Neptune, perhaps there is hardly one who knows that Greenwich Hospital derives considerable funds from Alston Moor, and that such an out-of-the-way corner in Cumberland helps to feed our old disabled seamen on the banks of the Thames,—and that, not by the produce of its surface, but of its underground depths. These are explored by lessees of the mining ground, which was once a portion of the forfeited estates of the Earl of Derwentwater. You cannot get much out of the Moor besides lead; but of that several thousands of tons are annually extracted, and between 1,000 and 2,000 persons find employment in and about the Cumberland mines.

When the manor of Alston Moor was surveyed upwards of 200 years ago, its mines were reported to be nearly exhausted,—in consequence of which report the manorial rights—120 acres of land, several houses and a corn-mill—were sold for 2,500*l*. Now it is a singular contrast that, in 1821, Mr. Locker, then Secretary, and subsequently a Commissioner of the Hospital, reported this same estate to be "the most valuable and interesting part of the landed property of Greenwich Hospital," the mines then yielding an annual produce of 100,000*l*., nearly one-fifth of which was received as royalty or rent. Thus, the pensioners really live on lead, and are not poisoned, but replenished. Mr. Wallace might have mentioned this and other interesting circumstances, and thereby partly relieved the leaden level of theoretic disquisitions.

Visitors to the Lake scenery of the same county never perhaps think of crossing to its south-eastern extremity, and sojourning for a day or two at Alston Moor; if they did, they might find some things to interest them, even in the midst of the mines. From the hills around, the wild deer, which once abounded there, have disappeared, for a century past; but near the falling waters of Ashgill Force the summits of the rocks and the sides below the waterfall are clothed with larches; and still, as of old, down for about seventy feet, dashes the Force, and ends in foam and spray among huge blocks of limestone, disposed in confused and rugged masses. A passage through the limestone near the fall has been called the "Fairie Hole"; and from the rocks at the termination of this passage the view below is very impressive. The Force itself is not much of a fall when compared with Lodore; but it is curious to note how the increased velocity of the water at this point has enabled a small stream to cut for itself a passage through the rocks, not less than from 90 to 100 feet in depth,—a phenomenon which may aid the solution of a greater problem, viz., what are the agencies which have removed, one after another, widely-extended sheets of stratified rocks in this locality, until an aggregate thickness of not

less than 1,000 feet has been cut through, and the upper portions of the hydrographical basins of the three principal northern rivers formed? The whole of this neighbourhood has been the scene of a vast geological denudation; and the quantity of matter removed must have been enormous. Possibly, the bed of the River Tyne above Alston may have been, incalculable ages ago, some 200 feet higher than at present. On the other hand, it is thought that since the glacial epoch the district of Alston Moor has been raised about 1,800 feet.

But geological speculation would probably give place to mining speculation, if one dwelt long at Alston. Glance at Mr. Wallace's excellent map of the Alston Moor and Coal-Cleugh Mining Districts, and you will see what a rich field for exploration underlies all that desolate Moor,—and if the map be not at hand, then lay about a hundred knitting-needles and a hundred common needles partly parallel to, and partly across, each other, on any sheet of paper which may represent the Moor, and you have a rude indication of the crowd of lead veins underneath. Most of these take a direction nearly east and west, and then are generally well mineralized. Others run in a north and south direction; and when above the Great Limestone, they seldom contain metallic substances; yet much lead ore has been extracted from them when in the Great Limestone, and both lead and copper ores in the strata below. Both these classes of veins are intersected by other small veins traversing the country in two directions; and these are not usually productive of ore. Altogether, they form a large metallic network, which on the map appears to be perplexing, but which in the practice of mining is sufficiently understood. The several veins get all kinds of local names, generally of inharmonious sound; and the point in practice is to ascertain the course, character and promise or prospective failure of each one. Mr. Wallace has written only upon the theory and respecting the origin of lead veins; his aim being to establish a relation or sequence between the percolation and circulation of water below the earth's surface and the deposition of lead ore in veins. Aqueous agency appears to be his theoretic favourite. This, as we have observed upon another occasion, is not the prevailing theory amongst many eminent mineralogical geologists; but it is argued for by Mr. Wallace with modesty, and, as he thinks, derives support from the numerous local phenomena which he adduces. The formation of the limestone and sandstone strata has been effected with very different materials, and under very different conditions. Both, however, were oceanic sedimentary deposits, both are non-metalliferous in the lower beds, and both are highly metalliferous in the upper beds. "Is there not, therefore," asks Mr. Wallace, "some reason for the supposition or hypothesis that the lead or lead-ore producing principle or substance they contain, has been held in solution by the waters of the sea and precipitated at the time when the strata were formed?" The author examines in detail the various veins in the district, with a view to show in later instances the existence of conditions in the formations favourable to the percolation of fluids; and he thinks that the attentive reader cannot fail to be struck with the exact correspondence between the laws regulating the descent and circulation of fluids and the deposits of lead ore in the veins. As to the source of the lead ore, he adopts the theory which attributes it to segregation from, or decomposition of, the rocks which form the walls of the veins where such deposits are found. Whatever the substance was that produced

lead ore, it entered into the composition of the rocks in varied proportions; and there are variations in the amount of lead ore contained in veins, according to the facilities for the decomposition of the limestone and sandstone rocks by fluids circulating in them, and in the course of such circulation re-arranging the metallic particles in the veins. If a careful chemical investigation of the Alston limestones and sandstones should prove that lead is diffused throughout their whole mass, then the inquiry is much simplified; but should the most searching analysis fail to discover lead in the rocks—apart from the veins—then it may be supposed that this metal is formed from purely elementary substances as yet unknown in a separate state, but set free by the decomposition of the rocks, and held in solution by the circulating waters; and the comparatively non-productive character of the veins in the lower beds of Alston Moor would be due to the small quantity of the ore-producing substances which there entered into the composition of both limestone and sandstone rocks.

Three chemists have recently detected the presence of silver and copper in sea-water; and it is calculated that in the course of six years the copper sheathing of the vessels of England, France and America acquires from the sea as much as nine tons of silver. If lead should be found in like manner in sea-water, then the highly metalliferous character of the upper beds at Alston would be due to the precipitation of the lead in greater abundance at the time of the deposition of the upper part of the Mountain Limestone.

In the seclusion of Alston, Mr. Wallace has meditated upon these things; and the consequence is the present handsome volume, with coloured maps, plans and sections. It is highly creditable to a man who has not enjoyed "the inestimable boon of a careful literary training" to have produced such a volume with so few literary blemishes. Although we are not converted to his theory, we are glad of his observations upon the several veins; and all who are interested in such subjects will find these pages instructive. Mr. Wallace, however, must be a bold man to venture with such a volume on such a subject before an unconcerned public, who think much more of lead in the shape of bullets and shot, or pipes and gutters, or on cathedral roofs, than lead in veins. Less still are they concerned to know how it got there, if they only can learn how to get it out. Yet it is only by the classification of observed phenomena, and by careful inference therefrom, that we can hope to find where the ore is and to extract it at a profitable rate. At present, it is to be feared that there is at least as much "dead work" as lead work—or, in plainer terms, too many sink their gold and get no lead.

SOCIETIES.

GEOLOGICAL.—Nov. 6.—Sir R. I. Murchison in the chair.—The following communications were read:—'Note on the Bone-Caves of Lunel-Viel, Hérault,' by M. Marcel de Serres.—These bone-caves contain a red earth with pebbles and an abundance of bones and coprolites of hyæna, lion, bear, wolf, fox, otter, boar, beaver, rhinoceros, horse, deer, ox, &c., with birds and reptiles.—'On the Petroleum-springs in North America,' by Dr. A. Gesner.—The author stated that 50,000 gallons of mineral oil are daily raised for home-use and for exportation. The oil-region comprises parts of Lower and Upper Canada, Ohio, Pennsylvania, Kentucky, Virginia, Tennessee, Arkansas, Texas, New Mexico, and California. It reaches from the 65th to the 128th degree of long. W. of Greenwich.—'Notice of the Discovery of some additional Land Animals in the Coal-measures of the South

Joggins, Nova Scotia,' by Dr. J. W. Dawson.—Two additional fossil stumps of trees have been examined by the author. One (*Stigillaria Brownii*) has yielded indications of six skeletons of *Dendropetion acadianum*, a jaw of a new species, two skeletons of *Hylonomus Lyellii*, one of *H. Wymani*, a number of specimens of *Pupa vetusta* and *Xylobius sigillariae*, and some remnants of insects (in coprolites). In a lower bed, a Stigmarian underclay, seven feet thick, the Pupa was found abundantly in a thickness of two inches, with fragments of Reptilian bones. The coal-seams between the trees and this bed indicate that this Pupa must have existed during the growth and burial of at least twenty forests.—'On a Volcanic Phenomenon observed at Manila, Philippine Isles,' by J. G. Veitch, Esq.—On the 1st of May, 1861, in the River Pasig, at Manila, a bank of fetid mud was thrown up several feet above the water.—The Chairman remarked that a bank of mud, thirty feet high, and more than a mile long, had lately been thrown up in the southern portion of the Caspian.

LINNEAN.—Nov. 7.—G. Bentham, Esq., President, in the chair.—S. Ainsworth, Esq. was elected a Fellow.—The President announced the donation of a marble bust, by Mr. Slater, of the late Robert Brown, Esq., Pres. L.S.; as also the bequest, by the late J. D. Salmon, Esq., of an extensive and valuable collection of birds' eggs, dried plants, and Natural History works, new to the Society's library.—The following papers were read:—'On West African Tropical Orchids,' by Dr. Lindley.—'Note on the Structure of the Anther,' by Prof. Oliver.—'Notes on *Coutoubea volubilis*, Mart., and some other Gentianæ of Tropical America,' by Dr. A. H. R. Grisebach.—The Secretary also read a letter from R. B. Cooke, Esq., announcing the discovery of *Maianthemum bifolium*, on the range of hills opposite Harkness, about four-and-a-half miles from Scarborough, where it grows in the woods, among luxuriant specimens of *Trientalis Europea*.

ZOOLOGICAL.—Nov. 12.—Dr. J. E. Gray, V.P. in the chair.—Mr. A. White read a description of a new and beautifully coloured species of Shrimp, from St. Vincent's Gulf, South Australia, found by Mr. G. F. Angas, and proposed for it the name *Hippolyte (Angasia) pavonina*.—Mr. White also described three new Moths, from India and Australia, and some miscellaneous species of Coleoptera, Lepidoptera, and other insects, from the British Museum and from Col. Jeake's collection.—A communication was read from Mr. S. P. Saville, entitled, 'Notice of the Capture and Discovery for the first time in the British Isles, of the Marsh Warbler (*Calomoherre palustris*).—The second portion of Mr. Morch's 'Review of the Vermetidae,' being a continuation of a former paper on this subject, was read.—Dr. J. E. Gray gave a notice of a new species of British Whale, proposed to be called *Globicephalus incrassatus*,—and of a large species of Tereido, probably referable to the genus *Furcella*, of Lamarck.—Dr. Gray also pointed out the characters of Helogale, a proposed new genus of Viverridae, and gave a list of the mammals collected by Mr. Wallace in the island of Mysol.—A paper was read 'On the Ophiidians of the Province of Bahia in Brazil,' by Dr. O. Wacherer; being a continuation of a former paper on the same subject.—The Secretary read an extract of a letter from E. Blyth, Esq., in which he identified the rhinoceros described some years previously, in the Society's Proceedings, by Dr. Gray, as *Rhinoceros Crossii* with *R. Sumatranus*.—Dr. P. L. Sclater exhibited a cast of the Skull of the Aye-Aye (*Chiromys Madagascariensis*), taken from a specimen in the possession of M. E. Verreaux, of Paris, the fourth example of this rare mammal received in Europe.—Mr. S. Stevens exhibited a portion of the collection of birds recently forwarded by Mr. Wallace from Mysol and Waigou, amongst which were many rare and interesting species.

INSTITUTION OF CIVIL ENGINEERS.—Nov. 12.—George P. Bidder, Esq., President, in the chair.—The paper read was on 'The Hooghly and the Mutla,' by Mr. J. A. Longridge, M. Inst. C.E.—

The subject was divided into the following heads:—First, a statement of the commercial importance of the port of Calcutta. Secondly, a brief account of the present mode of transport of the traffic to the port, and the modification of it, by works now in progress. Thirdly, a sketch of the physical features of the two outlets, the Hooghly and the Mutla. Fourthly, remarks on the past and present state of those rivers, as navigable channels, together with a consideration of remedial measures.

ROYAL INSTITUTION.—Nov. 4.—W. Pole, Esq., M.A., Treas. and V.P., in the chair.—The Rev. W. Wentworth H. A. Bowyer, M.A. was elected a Member.

SYRO-EGYPTIAN.—Nov. 12.—Dr. J. Lee in the chair.—A paper by Dr. H. Jolowicz, of Königsberg, was read, in which the author showed that the interpreters by whose help Herodotus, when in the Delta, made inquiry as to Egyptian customs and history, were native Egyptian priests who had learnt Greek, and not Greeks who had learnt the Egyptian language; and, consequently, that his information was all obtained directly from the priests, and not from any Greeks who had used their own observation and opportunities for gaining knowledge while resident in that country.—The Rev. B. H. Cowper read a paper 'On the Metals mentioned in Holy Writ, and the Places they were derived from.'

MEETINGS FOR THE ENSUING WEEK.

- Mon.** Royal Academy, 8.—'Anatomy,' Mr. Partridge.
- Tues.** Actuaries, 7.—'Mortality Experience of Scottish Amicable Life Society,' Mr. Spens.
- Architects,** 8.
- Tues.** Ethnological, 8.—'Ethnological Papers, British Association, 1861,' Dr. Hunt; 'Ethnology and Geography,' Mr. Crawford.
- Statistical,** 8.—'Proceedings of Sec. F. Brit. Assoc. '61,' Mr. Hammarck; 'Growth of Human Body,' Mr. Danson.
- Engineers,** 8.—'The Hooghly and Mutla.'
- Wed.** Meteorological, 7.—'General and Council,' Direction of Wind since '41, Mr. Glaisher; 'Rain-fall in Devonshire,' Mr. Eaton.
- Geological,** 8.—'Deposits, Bovey-Tracey, Devon,' Mr. Key; 'Carboniferous Brachiopoda, Punjab,' Mr. Davidson; 'Volcanic Cones at Foot of Etna,' Signor Gemmellaro.
- Society of Arts,** 8.—Opening Address, Sir T. Phillips.
- Tues.** Numismatic, 7.
- Zoological,** 4.—General.
- Linnean,** 8.—'The Two Forms in Primula,' Mr. Darwin.
- Chemical,** 8.—'Lentic Acid,' Dr. Thudicum; 'Crystalline Phases of Lime,' Dr. Benze Jones; 'Camphor of Peppermint,' Dr. Oppenheim.
- Royal,** 8.—'Lignites and Clays, Bovey-Tracey, Devon,' Mr. Pengelly; 'Fossil Flora of same,' Dr. Heer.
- Antiquaries,** 8.
- Sat.** Asiatic, 3.

FINE ARTS

Characteristics of Old Church Architecture, &c. in the Mainland and Western Islands of Scotland. By T. S. Muir. (Edinburgh, Edmonston & Douglas; London, Hamilton & Adams.)

THE aspect of this book does not promise much amusement to the merely general reader, bearing nothing more attractive on its square pages than a few plain outlines. The author has depended upon old-fashioned sketches for his illustrations. The result is, that the book looks sterling, but not attractive. The same character is maintained throughout, for under the dry crust the antiquary whose mental digestion is sound will find many a morsel of good savour, many a keen glance at the old time, and here and there a dash of eye-lighting humour such as Scotchmen delight in. It is well, indeed, for the author that he is a Scotchman, for a more ruthless destroyer of native idols we do not know to exist. The home tourist of northern race, or kilted pedestrian, or sportsman from the south, who may halt knee-deep in heather on the lone mountain sides or on the swardy islets of Argyshire, and see facing him and dream of a remote origin for some sculptured standard-cross, "fixed into a square plinth of one or more steps, tapering upwards, and terminating in a large disc or solid girdle, with short arms projecting from the summit and sides," will have those dreams dissipated by this book. He who sees the like of this, and incontinently goes off into a rapture, fancying stark missionaries of Erse race were slaughtered at

its foot by stiff-necked aborigines, and left on that spot in full possession of the martyr's crown,—or he who imagines that the place whereon he stands is distinguished by the cross as the site of the primal Christian converts' graves, is sadly mistaken, says our author, for the "*Dormit in Deo*" is not so old by many a hundred of years.

The author bisects his subject, as its examples occur on the Mainland or the Western Islands, and divides those of the first into three sections, the Norman and the First and Second Pointed Periods. The Islands follow one by one, from Arran and Bute to remote Rona, lying afar off in the lap of wild ocean, to which St. Ronan himself got on the back of a whale, where one may go a dozen times and not be able to land, "or what would be just about as serious, land well enough, but not be able to get off again in a hurry"; a place where the Devil himself had a difficulty in following the Saint, but, doing so, was so disgusted at seeing him at his devotions that he descended into the sea hind parts first—witness his still existing claw-marks on the rocks—and raised so diabolical a tempest that the holy man had to put his back against the east end of his little cathedral, "The Teampull Rona," to prevent its being blown in, which nevertheless did not prevent its being bent a bit, so to speak, into a sort of an apse. Of this early architecture, we learn that on the mainland little crypts and open caves marked with ecclesiastical features, and, in some cases, fronted with ponderous buildings of uncemented masonry, are the earliest and indeed the only remains of a date anterior to the Norman period. How many of the first are yet to be found in the even now imperfectly explored country, the lonely lake islets or "seld' seen" islands of the sea, is not to be told; but some dozen remains in such localities form the staple of Scotland's early church architecture, if they can be styled so. From these to the Norman period the author starts accordingly, and finds the appropriate style of the last numerically superior in examples to any that followed. We believe this to be the case in England itself likewise, and that Norman remains will be found to exist in by far the greater number of ecclesiastical edifices, however covered up by later work they are, or even, as is very commonly the case, wrought into such out of their solid bulk. The author considers that few, if any, of these so-called Norman remains, over the scantiness and mutilation of which he heaves an indignant sigh, are older than the first decade of the twelfth century. The earlier churches, founded by Malcolm the Third and Edgar, must have perished, as none of the peculiar Saxon-like features in the early Romanesque churches, extant in England, are observable in the oldest remains north of the Tweed. The author's remarks on this head are notable for their clear insight into the circumstances and peculiar position of Scottish architecture at this early period and its progress thereafter. The beautiful and elegantly proportioned cathedral of St. Magnus, Kirkwall, commenced in 1136, contains by far the greatest amount of Norman work in any building in Scotland; and, notwithstanding the introduction of certain features of First Pointed style and some things of even later date, its interior is a "grand, sweet, soft, sombre thing, nowhere equalled by any interior in Scotland." With few exceptions, the Norman chapels and small churches, which are numerous, and frequently nearly entire, are of the architecturally distinguished chancel and little oblong nave without aisles. This remote adherence to the basilican form is well worthy of notice, and not wholly to be accounted for by the poverty of the builders, we believe; but

shows them to be, as it were, on the edge of the wave, so to speak, of the Romanesque, and exhibiting its primary characteristic at a time long posterior to a great advance in the south country. Including the transition into the First Pointed style, the author thinks Norman architecture in Scotland had its limits within the one hundred and seven years between the accession of Alexander the First, in 1107, and the death of William the Lion, in 1214. A short period enough,—its devotion marked by the extent of country over which it extended, not less than the number of works still existent.

The cylindrical towers of Norman date which may take rank with the similarly-formed Irish round towers, are worthy of study beyond that they have received. That at Brechin is 110 feet in total height, and internally 25 feet in circumference at the base. There can be no doubt, from our author's account of the masonry of this edifice, that the attempt to give a far earlier date, "Pelagic," as people call it, to this and similar buildings is only a fresh example of the love of the mysterious in which poetically-inclined visitors are apt to indulge. The author throws a cruel, hissing javelin at the theories to be found in the well-known 'Prehistoric Annals of Scotland,' anent the assertions therein that the masonry of the Abernethy tower "closely corresponds to that at Brechin," and that the windows of the former are, probably, "of a later date than the original structure." He says that "each is of quite distinct character of masonry, and, as to the interpolated windows, if we are to assume such things as not original, without ample reason, we may make a building at any time, of any date we please. The burthen of proof of the renewal of the parts in question, of course, lies with the proposer of this old date for the edifices referred to. Stone coffins and sepulchral slabs are innumerable throughout Scotland, as in the northern counties of England.

The reader of this book should be careful to remember that the Second Pointed style, as designated by the writer, coincides with that commonly known as the "Middle Pointed." This is a liberty with the nomenclature of architecture which we deny his right to take. If Scotland, as according to him, although we cannot agree with the opinion, has no more than two styles of Pointed architecture, following the English fashions therein, because she found the art advanced a whole step when her wars between 1285 and 1422 had ceased, whereupon she jumped over the interval during which she had built little; because she did this is no reason why our whole ideas of the national architecture should be unsettled by the author ignoring that little altogether. It would have been better to name those few buildings of the Middle period which do exist, however few they may be, and so maintain the sequence generally understood. As in other countries, the so-called east end of a church is by no means often to be found to be due east. The cause of this diversity and divergence has been much disputed about. As a suggestion towards a solution, we should like some one to ascertain if the place of the sun's rising on the *fête*-day of the saint to whom the churches in question may be dedicated has not something to do with it. Of sepulchral brasses, such as bear effigies, the author gives us no news, as we hoped from so painstaking a traveller; the poor one in Glasgow is the only one known to exist.

The author voyaged in the most thorough-going fashion through the whole of the Western Islands, and found Christian civilization (of a sort) wherever he went, and remains of old time which the last half-century seems to have dilapidated more than whole ages

before it. The time for examination was opportune, therefore; and we should be glad indeed if words of ours should reach the ears of certain noble proprietors of the Isles, and move them to have some care for the remains of bygone time, for whose preservation they are responsible, and which duty, according to our author, they sadly neglect. Indeed, but for a certain reverence with which the country people regard at least some of these buildings, they must have been entirely swept away long ago. It seems that when the Sappers were at Rona—surveying for the Ordnance Map some years since—they made a hole in the walls of the "Teampull," to its great detriment, and an ill example to the simple islanders who report it. This is a matter which should be looked to. Onwards the author journeyed, seeing all there is to be seen for his purpose in many an islet seldom heard of amongst us; saw St. Kilda's, Sula Sgeir, the Eileanan Bhearnaraidh, Benbecula and Berna. At the first-named place he found not the slightest trace of the famous boat-ouge and violent sneezing which was said to run through the island whenever a stranger landed, although as late as 1846 a child, says the death register, died of the former. Neither here nor elsewhere did he find any theatrical properties in the way of kilts.

FINE-ART GOSSIP.—The private view of the Winter Exhibition takes place this day (Saturday), at the French Gallery. The collection is, we understand, of considerable interest.

Mr. Cope's fresco, 'The Raising of the Standard at Nottingham by Charles the First,' may be seen in the Peers' Corridor of the Houses of Parliament, as stated by us last week. The King is represented standing beneath an oak-tree, his son leaning upon his arm. Charles's expression and attitude are of the tamest, even if he can be said to have expression at all, or the attitude were anything more than that of standing on his legs. The Prince's figure is much better, being graceful and lively. Behind them is the Castle and its towers, several of the Cavalier party, conventionally represented with curls, gewgaws and commonplace faces. A herald stands beside these, but seems to have no connexion with the party, nor any business but to wear the armorial tabard. Opposite these is a group of cheering partisans, one of which, to the front, considered as a single figure, is admirable. We miss much in this picture that artists in general are only too much delighted to produce—of faithful reproduction, broadly or elaborately. Of texture there is little indeed. The embroidered herald's coat hangs stiff and dull upon his shoulders, as a tile would. The King's armour is leaden, and any variety of this quality is omitted altogether in other parts of the picture. We have seen pictures by this artist we liked infinitely more than this one, which lacks uniformity of spirit, solidity, variety (as above), and strength.

Mr. Holman Hunt's picture, 'The Light of the World,' is to be seen at Mr. Corbould's studio, Eldon Lodge, Victoria Road, Kensington, on presentation of a visiting card. Mr. Corbould's kindness affords an opportunity of quietly inspecting this picture, which will be appreciated by those persons who have only seen it in its incongruous situation at the Royal Academy Exhibition.

The screw store-ship Supply has arrived with the before-mentioned sculptures recovered by Lieutenants Porcher and Smith from the ruins of Cyrene. This is the last consignment, we understand, from that site.

It is reported that Mr. Maclise has been offered a knighthood, and, like Mr. Thomas Fairbairn, declined the same.

Two prizes, respectively of 15*l.* and 10*l.*, have been offered to the pupils of the schools of the Department of Art, at South Kensington, by Messrs. Pellatt, for the best designs of a glass service, comprising wine and champagne glasses, goblets, wine-jugs, decanters, &c. No limitation as

to the style to be adopted is made, excepting that the ornamentation which may be employed shall be in characteristic keeping with the general form of the articles.

The Cabinet of choice Greek Coins formed by Mr. Merfyn, Vice-Consul at Athens, has been disposed of, during the past week, by Messrs. Sotheby & Wilkinson, at high prices. The following may be cited:—Naxos Sicilie, with bearded head of Bacchus, 13*l.* 13*s.*—a Syracusan Medallion, 17*l.* 10*s.*—Acanthus, with name of the artist, 12*l.* 12*s.*—Amphipolis, ob. full-faced bust of Apollo, with rare adjunct, 23*l.*—a silver coin of Larissa, with female head, full face, with necklace, 32*l.*—Molossæ, ob. a dog with collar, 7*l.* 7*s.*—Ætolia, ob. head of Hercules in lion's skin, 20*l.* 10*s.*; another specimen, with head of Diana, 20*l.* 10*s.*—Locri Operati, female head to the left, 9*l.* 9*s.*—Haliartus—Boeotia, a coin of the greatest rarity, 28*l.* 10*s.*—Platæa, ob. Boeotian buckler, 11*l.*—Nine extraordinarily fine coins of Elis, selected from a small hoard found near Olympia, 128*l.* 2*s.*—Carystus—Euboeæ, ob. cow suckling a calf, 20*l.*; another, from a different die, 10*l.* 10*s.*—Andros, with head of Bacchus, 5*l.* 5*s.*—Ios, insula, with head of Homer, 5*l.* 15*s.*—Paros, insula, with female head, 7*l.* 15*s.*—Parium—Mysia, with veiled head of Ceres, 6*l.* The 158 lots produced 578*l.* 10*s.* 6*d.*

Another great collection of coins and objects of *virtù*, similar—and in some respects superior—to that of Frau Mertens-Schaffhausen, which was sold a few years ago, will soon come under the hammer at Cologne. It is that of Herr Friederich Koch, who died on the 17th of last month, leaving to his heirs a collection of rare coins and antiquities, such as cannot frequently be met with in the possession of private gentlemen. His name is well known in the antiquarian world; for his transactions with all the cabinets of Europe were great, and his whole life and fortune were devoted to the study of the arts, and the gratification of his passion for collecting. A catalogue is in progress.

The Department of Art, being anxious to obtain on loan as many works of Art of a suitable character on the undermentioned occasion, have put forward a statement to the following effect:—"The forthcoming International Exhibition of 1862, being likely to cause a great increase in the number of visitors to the South Kensington Museum, and as the new Courts now in course of construction will, by the time of the opening of the Exhibition, be ready to receive collections, it is desirable on that occasion to extend, in a special manner, the system, which has hitherto been so successful, of receiving fine works of Art on loan. It is, therefore, the intention of the Department to assemble together in 1862 a special collection of works of Art, in categories analogous to those represented in the Art Museum, with the view, more particularly, of bringing together for temporary exhibition the finest known specimens of their several kinds in the country. Without, for the present, setting forth any definite scheme, objects in the following categories are specified by the Department as desirable for their purpose:—Decorative works in metal of the mediæval and more recent periods, gold and silver plate, bronzes, decorative arms and armour, jewelry, enamels, earthenware and porcelain, carvings in ivory and other materials, decorative furniture, miniatures, &c. Mr. J. C. Robinson, the superintendent of the Art Collections, is charged with the execution of this minute." This is, we presume, the official language to express the fact that the gentleman in question, who is one of the officers of the South Kensington Museum, will be happy to receive the contributions of the public.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor: Mr. COSTA.—Thirtieth Season.—THE FIRST CONCERT ON FRIDAY, November 23, when will be performed Mendelssohn's *ATHALIE* and Handel's *DETTINGEN TE DEUM*. Principal Vocalists: Miss Louisa Pyne, Miss Serle, Madame Laura Baxter and Mr. Winn. The Illustrative Verses to *Athalie* will be recited by Mr. George Vandenhoff.—Tickets, 3*s.*, 5*s.* and 10*s.* 6*d.* each, at the Society's Office, 6, in Exeter Hall.

ROYAL ENGLISH OPERA, COVENT GARDEN.—Under the Management of Miss LOUISA PYNE.—MR. W. HARRISON.—ON MONDAY AND FRIDAY, THE MARRIAGE OF GEORGETTE. After which, at Eight o'clock, ROBIN HOOD.—ON TUESDAY, WEDNESDAY, THURSDAY AND SATURDAY (first time), a New Opera, THE TOMMAKER. After which, at Eight o'clock, THE TROUBLE OF THE LINE; and on WEDNESDAY AND SATURDAY, RUY BLAS.—Stalls, 7*s.*; Private Boxes, from 10*s.* 6*d.* to 4*l.* 4*s.*; Dress Circles, 5*s.*; Upper Boxes, 4*s.*; Amphitheatre Stalls, 3*s.*; Pit, 2*s.* 6*d.*; Amphitheatre, 1*s.*—The Box-Office open Daily, from Ten till Five. Commence at Seven.

MONDAY POPULAR CONCERTS, St. James's Hall.—THE FIRST CONCERT of the Season will take place on MONDAY EVENING NEXT, November 18, to commence at Eight o'clock precisely. Piano-forte, Mr. Charles Halle; Violin, M. Vieuxtemps; Violoncello, M. Pucce. Vocalists: M. L. Florence Lancia and Mr. Winn. Conductor, Mr. Benedict. For full particulars, see Programme.—Box Stalls, 5*s.*; Balcony, 3*s.*; Admission, 1*s.* Tickets at Chappell's, Cramer's, Hammond's, Keitch, Prowse & Co.'s, and at the Hall.

GLEES, MADRIGALS AND OLD BALLADS.—THIRD SEASON.—Egyptian Hall (Dudley Gallery).—Mr. Mitchell has the pleasure to announce that the popular and eminently successful Entertainment of the LONDON GLEE AND MADRIGAL UNION (Miss J. Wells, Miss Eyles, Mr. Baxter, Mr. W. Cummings, Mr. Land and Mr. Lawler, under the direction of Mr. Land) will be resumed on MONDAY EVENING NEXT, November 18, and continued every Evening (except Saturday), and on Wednesday and Saturday Afternoons. The Analytical Programme, compiled by T. Oliphant, Esq., Literary Illustrator.—Reserved Seats, 3*s.*; Unreserved, 1*s.*; a *la Carte*, 6*d.*; and *Family*, 5*s.*, may be secured at Mr. Mitchell's Royal Library, 23, Old Bond Street.

ROYAL ENGLISH OPERA.—More than a year ago [*Athen.* Nos. 1720–1] Mr. Macfarren's 'Robin Hood' was discussed here so fully that on its revival, with change of theatre and of cast, there is no need of remark. The music, however, was heard to great advantage as compared with that of the last novelty; and the opera was welcomed accordingly; but the management of Covent Garden Theatre would be wise in recollecting how far went the success of the work at the Haymarket, and that the public soon wearied of it there, even when 'Robin Hood' was new and Mr. Sims Reeves sang 'The guiding star.' Our impression remains,—recollecting, especially, the success of the revival of 'The Miller and his Men,' under Mr. Buckstone's management,—that a reproduction of Bishop's 'Maid Marian,' with some modifications, might have more legitimate hope of keeping the stage.

The new *Maid Marian*, Madame Guerrabella, was heard in a few concerts towards the close of last season. A lady more elegant in appearance than herself is not on the London stage; her voice is a *soprano*, of no peculiar beauty, but not antipathetic; sufficient in compass, sufficiently powerful under pressure, especially in the upper notes, but losing in tone in rapid music. Of its intonation, a first night does not justify any one in forming an opinion. She sings with refinement and feeling, and appears to have been trained according to good methods. Her action, too, is graceful and sufficient. She was very well received. That a part originally calculated for Mr. Sims Reeves will sit uneasily on Mr. Haigh was to be foreseen; and his *Robin Hood* was weak, though the ballad was so charmingly finished that the *encore* was not to be resisted. The best singing of the evening was Mr. Santley's. He makes steady progress, too, as an actor. Miss S. Pyne is a great improvement on the original *Alice*. The music went both smoothly and spiritedly,—and the fun of the fair (rough some of it is) told better at Covent Garden than at Her Majesty's Theatre, owing to the greater size of the stage.

LYCEUM.—The experiment of the ability of a dramatic author to manage a theatre of his own is here being triumphantly carried out, where many years ago the attempt was thought desperate, and was once made under difficulties which precluded success. Mr. Falconer produced on Saturday the new piece which he had long previously advertised, and which met, as it deserved, with decided approbation. His new drama is in four acts, and is entitled 'Peep o' Day; or, Savourneen Deekish.' It is founded upon one of the 'Tales of the O'Hara Family,' and, for the most part, is capitally arranged. The scenery is very striking and startling, and calculated to add to the reputation of Mr. Telbin and Mr. Grieve. The Lovers' Dingle, in the first and fourth acts, is an exquisite picture; and the Old Quarry in the Foil Dhuvir, or Dark Valley, is a scene of terror boldly imagined and artistically executed. Hither *Kathleen Kavanagh* (Mrs. Bowers) is invited by a forged letter, written by Squire Pussell, for the purpose of being murdered by his agent, in order to make room for his

second marriage with the heiress, *Mary Grace* (Miss Clara Weston). The bridge over the chasm is cut away by the assassin, and there seems to be no escape for the victim, when her brother, *Harry Kavanagh* (Mr. Herman Vezin), appears above on the precipice, with *Barney O'Toole* (Mr. Falconer), and, throwing himself on the branches of a tree, is enabled to descend into the gulf and effect her rescue. The other great incident consists of the abduction of *Mary Grace* by Pussell and his servants, disguised as Peep-o'-Day boys, which is defeated by the real boys themselves, under the leadership of *Kavanagh*, taking him in his own snare. *Barney O'Toole* is throughout the secret agent, who, by pretending to favour the plans of Pussell, contrives to subvert them. The dialogue of the new drama has most of Mr. Falconer's peculiarities, and abounds in ethical writing; but it is strangely interesting. As to the skill with which his plot is conducted, the fact that the audience felt a sustained interest in it for five hours is sufficient proof. Act the Second ends with a faction fight at a festival fair, which is suppressed on the appearance of the priest, *Father O'Leary* (Mr. Addison),—a character which is carefully drawn and cleverly acted. Mr. Falconer will probably see reason to reduce the length of the piece, and thus secure the favourable acceptance of it for many nights to come.

HAYMARKET.—A comedy which, it is stated, has been played eight hundred times in America, and is attributed to the pen of Mr. Tom Taylor, was produced on Monday. It is entitled 'Our American Cousin,' and is in three acts. The character referred to in the title was acted by Mr. Buckstone—a Yankee Rough, by name *Asa Trenchard*—and was as humorous as it was outrageous. Generous to the back-bone (which, by-the-bye, he speaks of as "blushing all the way down"), he uses no ceremony in accomplishing his ends by the readiest means, not shrinking either from theft or robbery. The scene is placed in England, but the free-and-easy manners portrayed can scarcely be accepted as representing any phase of English society; and considered in any way as intending anything of the kind, the picture is egregiously absurd. Utterly ridiculous as the whole affair certainly is, the reader will reasonably expect to know what can have led to its extraordinary success. A character, the extreme opposite to that of the unceremonious Yankee, is supplied by the author as an example of aristocratic manners and intelligence in the old country, in the person of an obtuse and harmless peer, named *Lord Dundreary*. Whether this character, by itself, would sustain any degree of interest, we much doubt; but in the hands of Mr. Sothorn, the gentleman who has been acting it for so many hundred nights over the water, it is certainly the *funniest* thing in the world. The part is abstractedly a vile caricature of an inane nobleman, intensely ignorant and extremely indolent. The notion once accepted by the audience that such an absurd animal could be the type of any class whatever, the actor was free to exaggerate to any extent the representation of the ridiculous. Mr. Sothorn, in the quietest way, takes full advantage of his position, and effectually subdues the audience to his mood. Laughter, at all times irrepressible, finally culminates in a general convulsion, which to our ears seemed quite a peculiarity—it was so strange, and yet so natural. The occasion was simply the reading of a letter from a brother in America, containing literally nothing more than that he feared a former letter had miscarried, from his having forgotten to direct it. This, with certain inane comments on its contents, sufficed to enable Mr. Sothorn to produce the prodigious effect we have indicated. We are, therefore, disposed to believe that Mr. Sothorn, as an eccentric actor, is a man of no ordinary genius, and reasonably desire his further acquaintance. The public, we have no doubt, will be of the same opinion.

MUSIC IN LEIPZIG.

Leipzig, November 10, 1861.

Our musical season is now in full course. Gewandhaus, Euterpe, Chamber Music, Sing-Acads—

mie, and the multitude of private societies, are all claiming the ears of the public. Six Gewandhaus concerts have already taken place; and in these we have had four new compositions and two exhumations.

To speak of the new pieces first. The most important is an 'Overture to Medæa,' by Herr Woldemar Bargiel, of Cologne. The former works of this composer, full of promise as they were, have often been marred by the want of symmetry of form. In the present composition he has overcome this defect to a very great degree, and proves that to a man of genius attention to the laws of form does not necessarily act as a clog to the imagination. The themes are melodious, and several even noble. The instrumentation, with the exception of one or two passages, which are rather harsh, is excellent. That the general effect is mournful and gloomy is almost inevitable, in consequence of the subject Herr Bargiel has chosen for illustration. All in all, it is indisputably a fine composition.

Kapellmeister Reinecke's 'Pianoforte Concerto' is also a new work. Like all this writer's productions, it at once tells us that its composer is a thorough musician. It is exquisitely made, and there is much that is interesting in it; but one cannot help feeling that it is too much of a cabinet piece,—the work is too fine, and it lacks the warmth which carries the hearer captive. The slow movement is somewhat novel. It is interspersed with passages for the violin and violoncello obligato. The passages in themselves are very melodious; but it is open to question whether they do not too much distract the attention from the principal instrument. But whatever doubt there may be of the perfection of the composition, of the excellence of Herr Reinecke's playing there can be none. As a player of pure, classical music, whether for the orchestra or for the chamber, he is admirable both in execution and in conception.

Herr Musik-director Levi, of Mannheim, has also appeared as the composer and performer of a 'Pianoforte Concerto.' Herr Levi was formerly a pupil of the Leipzig Conservatorium, and has left that institution about three years. His Concerto is modelled on a more ambitious scale than that of Herr Reinecke's; but in attempting too much he has been less successful. His recollections of Mendelssohn and of Schumann—especially of the latter—are too strong. But, with all this, his work shows that he has studied carefully and well. A Sonata, parts of which Herr Levi played in a Conservatorium *soirée*, proves that he can do better things; one movement, in the unusual time of $\frac{3}{4}$, is really very graceful and piquant.

The last novelty I have to mention is a 'Concert Allegro' for the violoncello, composed and played by Herr Davidoff, the principal violoncellist of the Gewandhaus orchestra. As a composition, it is essentially a display piece,—better than many of its kind, but, in a musical point of view, not equal to his Concertino, which he produced in a former season. Herr Davidoff's playing is masterly in every respect; indeed, except Signor Piatti, whose style is quite different, I have heard no one who equals him. As a quartett player he is also excellent,—so you may congratulate yourselves on having him in London next season.

And now for the exhumations. The first is from 'Blanche de Provence,' an opera written in 1821, for the Paris stage, by Cherubini, Boieldieu, Berton, Kreutzer and Paër. The "number" in question is by Cherubini,* and is a Lullaby for female voices, as exquisite and gracious as can be imagined. How it is possible that it should now be performed "for the first time" (in Leipzig, at least) is more than I can understand.—The second is likewise a chorus for female voices—Psalm xxiii.—by Schubert. This, also, is a beautiful work, and makes one the more eager that the immense mass of unknown music which Schubert has left behind him should at length be made known to the public. Both the above-mentioned works had originally only piano accompaniments. These Herr Ernst Rudorf, of Berlin, has instrumented for the orchestra with excellent taste and skill; his orchestra-

* This, we presume, is the chorus, which, like Handel's 'See the conquering hero comes,' is among the few stock-pieces at the concerts of the *Conservatoire* at Paris.—Ed.

tration of the Cherubini Lullaby is especially successful.

As a whole, the Gewandhaus orchestra does not seem to be under such thorough discipline as when it was under Herr Rielz's vigorous *bâton*. A.

MUSICAL AND DRAMATIC GOSSIP.—A repetition of a history often told is sometimes necessary in self-justification. Any one consulting the last page of last week's *Athenæum*, with a view of gathering from "opinions" there published some idea of the value of the new opera, will be "thrown out" by the withdrawal of 'Ruy Blas' from the Covent Garden bills of this week in favour of 'Lurline' and 'Robin Hood'! We had no idea of such an immediate issue when the paragraph was penned which appeared last week. The fact is worth noting by way of warning.

The concerts of the *Sacred Harmonic Society* will commence on the 29th.—Prince George Galitzin has been again opening promenade concerts at the St. James's Hall, with Miss Augusta Thomson for principal singer.—The *London Glee and Madrigal Union* commenced a series of their entertainments on Monday last.—We are informed that the overture to Herr Pauer's new opera, about to be produced in Germany, will be played to-day at the *Crystal Palace Concert*.

A new principle of constructing very small organs as they are to be called—*minima* organs has been, during the past week, exhibited at the Dudley Gallery. When carried to its extremity (or smallest form), the instrument is no larger than the harmonium, now so popular. One, having some of the characteristics of a church organ, is still by the makers compressed within limits moderate compared with those on the known principle of building. The tone seems satisfactory; less so the touch, which at present is heavy. In the supplying of wind, again, some improvement may be possible. These are matters all the more worth attending to from the smallness of scale; and, indeed, till the question of wear and tear has been settled by trial, it is not easy to pronounce on the new invention, beyond saying that it appears an ingenious one, which may prove of service, especially in the education of organists, whose difficulties of obtaining opportunities for practice are oftentimes great.

If bad news comes from York, good tidings arrive from Glasgow. We are assured that the Choral Union there is in a flourishing plight. At one of its late meetings the step was ventured of giving a male concert, after the fashion of the German *Liedertafel* societies, at which Mendelssohn's *Cantata*, 'The Sons of Art,' and his 'Bacchus' chorus from 'Antigone,' were performed, with other music of the kind. The 'Messiah,' too, has been given very well. The *Athenæum* has testified to the very superior powers of Mr. Lambeth as a conductor—powers far more rare than audiences dream of.—It is a disease among small composers (especially in England) to desire the possession of a *bâton*. It is a symptom of the malady that they often "break down," and spoil more music than they can save (their own included). The good conductors in Europe could be counted off on the right and left hand. We fancy Mr. Lambeth to be one of them, and are glad to see his influence telling in Glasgow. There is now some talk, we are assured, of a new music-hall being built, the City Hall being in many respects unsuitable for orchestral and choral performances.

It has been said for a few days past that there is a chance of Madame La Baronne Vigier (formerly Mlle. Cruvelli) returning to the Opera stage. If this be so, it is to be hoped that England will not be the place of return, great as is our dearth, and wide the void created by the final departure of Madame Grisi. A lady at once so richly gifted, so disturbing and so unsatisfactory, as Mlle. Cruvelli is not in the list of our musical recollections.

Law,—as reports of the vestry proceedings of St. James's, Westminster, show,—has again entered that unlucky building—*Her Majesty's Theatre*. By this, we should conceive that the chances of its re-opening next season are reduced.

The winter concert season at Vienna is setting in with great activity. The journals announce entertainments to come in number enough to make the head dizzy—some 130 concerts! Madame Schumann, Herren Joachim and Brahms are to be among the "stars." The established societies, meanwhile, offer no common variety, chiefly in research among that music of the past which we English will not know. Here is a concert bill of the *Sing-Academie*, printed in the *Deutsche Musik-Zeitung*:—A 'Magnificat,' by Durante; a first Chorus from one of the Cantatas of Bach; a 'Crucifixus,' by Lotti; a 'Christe Eleison,' by Eccard; a chorus, by Michael Haydn; a 'Tenebræ,' by Mendelssohn (some Roman Catholic music out of our knowledge); an 'Ave Maria,' by Calvisius (that strange man, half necromancer, half musician, a hero "to let" for any Art-romances to come, whose very name is unknown in England); a Christmas song, by Blumner; an air and chorus from 'Abraham'; a chorus, by Handel.—We can show nothing to match this in our choral London.

A new Cathedral organ, just ready for Arras, with four manuals (pedal-board, of course) and fifty-two stops, is said, in the *Gazette Musicale*, to be the most complete instrument till now "turned out" by its makers, MM. Mercklin & Schulze, who now stand in the very first rank of European builders.

MISCELLANEA

The Niger Exploring Expedition.—This Expedition, under Captain Douglas, has returned to Lagos. The Expedition spent eighty-one days in the river, undergoing during that period the usual visitation from fever inseparable from an exploration of the Niger. Captain Douglas seems to have been more successful in overcoming the opposition of the natives by employing force than by pacific measures. He destroyed five villages, the inhabitants of which were very hostile. The effect of this was to render the other chiefs and people met with extremely civil. The highest point reached on the river was Onitcha. The Expedition remained there a month, and communicated with Dr. Baikie, who has been in that part of Africa for some years.

The Massacres in Syria.—The following letter has been received from Mgr. Tobia Aun, Bishop of Beyrout, by Mr. Lewis Farley, author of the recent work on 'The Massacres in Syria':—

Beyrout, September 28, 1861.

"I have received with the greatest pleasure the book which you were so good to send me; but as it was in a tongue unknown to me, I have been obliged to delay acknowledging its receipt until I had well understood the book, and perfectly comprehended the just observations which it contains. I feel most grateful to you for the straightforward and truthful manner in which you so clearly and naturally describe everything about the massacre of the Christians, as also for your valuable pleading of their cause, in order to exonerate them from the false and unjust charges imputed to them in the House of Commons. Since the four bishops have defended themselves against what has been said against them in the English Parliament, by the means of a letter (which you have published in your book, at Chap. x.), they have not found anything worth answering. Nor could the noble orator adduce any argument, either sufficient or reasonable, which could in any way weaken the statements of the letter above mentioned. So the four bishops let the matter stand still. However, should any circumstance occur to oblige them again to write in their defence, so as to throw off the slander if it should be said against them in future, they will certainly send you a copy. I must renew to you my thanks and gratitude for the lively interest you took, in your most estimable book, in giving to the public a truthful picture of the Christians of Syria. I pray the Almighty to give you every blessing; and I remain, your faithful servant, TOBIA AUN, Bishop of Beyrout."

TO CORRESPONDENTS.—G. R.—B. S.—R. A. K.—G. B.—A. B. M.—received.

AMERICAN SLAVES: THEIR CHRISTMAS WREK.

Beadle & Co., of London and New York, will publish early in December, in fcap. 8vo. embellished with Engravings by eminent Artists, price 1s. 6d. paper boards; 2s. 6d. extra cloth gilt, a highly-interesting and original Novel, entitled

MAUM GUINEA and her PLANTATION CHILDREN: a Romance of Christmas Week among the American Slaves.

By Mrs. METTA V. VICTOR.

All the joy and sorrow, pathos and tragedy, of slave life are daguerrotypied in this delightful volume. It tells the story of the Christmas Holidays as they are enjoyed in the great sugar and cotton plantations of the United States: Barbicous Night-Dances, Story-telling, Torch-light Hunting, Courting and Marriage, are all reproduced to the very life; while through the whole runs the thread of a romance of absorbing beauty and power, illustrating the lights and shades of slave experience in an impressive manner.

Beadle & Co. 44, Paternoster-row.

Just published, in 2 vols. demy 8vo. price 12s.

INTRODUCTION to the PENTATEUCH: An Inquiry, Critical and Doctrinal, into the Genesis, Authority and Design of the Mosaic Writings.

By the Rev. D. MACDONALD, M.A.

"A work of solid learning, and as solid argument; it contains a full review of the evidences, external and internal, on the subject. The author is an independent and able thinker, and his work is a valuable addition to Biblical Theology."

(*London Guardian*).

"Mr. Macdonald's valuable recent work."—*Isaac Taylor*.
"The author has thoroughly mastered the literature of his subject and has given us the results in a calm, thoughtful, scholarly and well-arranged book."—*Eccelesiastic*.

"While he has thrown the defence that was called for around the Pentateuch, he has given a higher than an apologetic character to his work by his ample and admirable treatment of its true place and functions in the revelation of God to man, as the first and germinating root of that Tree of Life whose leaves were for the healing of the nations."—*Witness*.

"A work of solid architecture, reminding you, in its solemn tone and bread-based masonry of induction, of an Egyptian pyramid."—*Christian Spectator*.

"He has far surpassed all his predecessors."—*Christian Witness*.
"Its author has raised himself, by its composition, to the foremost rank in Biblical Literature; we give it our most hearty commendation; as a monograph on the Pentateuch, it stands alone in our literature."—*Patriot*.

"We have no hesitation in saying that these volumes will fully sustain the author's reputation for sound judgment and scholarly acquirement."—*Scottish Guardian*.

By the same Author, in 8vo. price 12s.

CREATION and THE FALL: A Defence and Exposition of the First Three Chapters of Genesis.

UNITED KINGDOM LIFE ASSURANCE COMPANY,

8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.

CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to £730,665 7s. 10d., all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

EQUITABLE ASSURANCE OFFICE,

NEW BRIDGE-STREET, BLACKFRIARS.

ESTABLISHED 1762.

DIRECTORS.

THE RIGHT HON. LORD TREDEGAR, President.

William Dacres Adams, Esq.

Philip Hardwick, Esq.

William Samuel Jones, Esq.

John Aldin Moore, Esq.

William Frederick Pollock, Esq.

Charles Pott, Esq.

Rev. John Russell, D.D.

James Spicer, Esq.

John Charles Templer, Esq.

Right Hon. Lord Tredegar.

John Charles Burgoyne, Esq.

Lord George Henry Cavendish, M.P.

Frederick Cowper, Esq.

Richard Gosling, Esq.

Peter Martineau, Esq.

THE EQUITABLE is an entirely MUTUAL Office. The reserve, at the last "rest," in December, 1859, exceeded three-fourths of a million sterling, a sum MORE THAN DOUBLE the corresponding fund of any similar Institution.

The Bonuses paid on Claims in the Ten Years ending on the 31st December, 1859, exceeded Three Millions and a Half, being more than 100 per Cent. on the amount of all those Claims.

The amount added at the close of that decade to the Policies existing on the 1st January, 1860, was £1,977,000, and made, with former additions then outstanding, a total of £4,070,000, on Assurances originally taken out for £6,252,000 only.

These additions have increased the Claims allowed and paid under those policies since the 1st January, 1860, to the extent of 150 per Cent.

The Capital at this time consists of

£2,730,000—Stock in the Public Funds.

£3,006,297—Cash lent on Mortgages of Freehold Estates.

£300,000—Cash advanced on Railway Debentures.

£83,590—Cash advanced on security of the Policies of Members of the Society.

Producing annually, £221,482.

The total income exceeds £400,000 per Annum.

POICIES effected in the current year (1861) will participate in the distribution of Profits made in December, 1859, so soon as Six Annual Premiums shall have become due and been paid thereon; and, in the Division of 1869, will be entitled to additions in respect of every Premium paid upon them from the year 1862 to 1869, each inclusive.

On the surrender of Policies, the full value is paid, without any deduction; and the Directors will advance nine-tenths of that value as a temporary accommodation, on the deposit of a Policy.

No extra Premium is charged for service in any Volunteer Corps within the United Kingdom, during peace or war.

A Weekly Court of Directors is held every Wednesday, from 11 to 1 o'clock, to receive Proposals for New Assurances; and a Short Account of the Society may be had on application personally, or by post, from the Office, where attendance is given daily, from Ten to Four o'clock.

ARTHUR MORGAN, Actuary.

Now ready, Second Edition, price 21s. cloth,

THE ROYAL ATLAS

OF

MODERN GEOGRAPHY,

IN A SERIES OF ENTIRELY ORIGINAL AND AUTHENTIC MAPS.

By A. KEITH JOHNSTON, F.R.S.E. F.R.G.S.

Author of the 'Physical Atlas,' &c.

With a complete Index of easy reference to each Map, comprising upwards of 150,000 Places contained in this Atlas.

Imperial folio, half bound in rusia or morocco, 51. 15s. 6d.

"Of the many noble Atlases prepared by Mr. Johnston and published by Messrs. Blackwood & Sons, this Royal Atlas will be the most useful to the public, and will deserve to be the most popular."—*Athenæum*, August 10, 1861.

"We know no series of Maps which we can more warmly recommend. The accuracy, wherever we have attempted to put it to the test, is really astonishing."—*Saturday Review*.

"The culmination of all attempts to depict the face of the world appears in the Royal Atlas, than which it is impossible to conceive anything more perfect."—*Morning Herald*.

"This is, beyond question, the most splendid and luxurious, as well as the most useful and complete, of all existing Atlases."—*Guardian*.

"There has not, we believe, been produced for general public use a body of maps equal in beauty and completeness to the Royal Atlas just issued by Mr. A. K. Johnston."—*Examiner*.

"In comparing this beautiful and valuable Atlas with previous collections, every one must be struck, not only by the immense advances in geographical knowledge, but by the greatly increased power of representing that knowledge to the eye in the course of the last thirty years."—*Economist*.

"An almost daily reference to, and comparison of it with others, since the publication of the first Part some two years ago until now, enables us to say, without the slightest hesitation, that this is by far the most complete and authentic Atlas that has yet been issued."—*Scotsman*.

W. Blackwood & Sons, Edinburgh and London.
Sold by all Booksellers.

STOVES FOR ENTRANCE HALLS, SCHOOL
ROOMS, CHURCHES, &c., all made with fire-brick linings, and entirely free from the objections found to some of the other stoves, which, from their liability to become overheated, are dangerous to the health, and render the atmosphere of the room in which they are used very oppressive, and without open fire, and to burn through the cold season, if required, without going out. Prospectuses forwarded. **FREDERICK EDWARDS & CO. GREEN**

TEA.—DR. HASSALL'S ("The Chief Analyst of the Sanitary Commission of the Lancet on Food") Report on the Tea and Coffees sold by Messrs. STRACHAN & CO. 26, Cornhill, London, E.C.—"Having purchased through my own agents, in the ordinary way of business, a variety of samples of the several qualities of Tea and Coffee vendible by Messrs. STRACHAN & CO., I have subjected the whole of them to Microscopical Examination and Chemical Analysis. The result of the examination obtained was in the highest degree satisfactory."
A full Report of the above Analysis, also List of Prices, can be had on application to Messrs. STRACHAN & CO. 26, Cornhill, E.C. London. Carts to all parts of London daily.

A MOST DESIRABLE BREAKFAST BEVERAGE.
E P P S ' S C O C O A ,
(commonly called Epps's Homoeopathic Cocoa).

The delicious aroma, grateful smoothness, and invigorating power of this preparation, have procured its general adoption as a most desirable breakfast beverage. Each packet is labelled "James Epps, Homoeopathic Chemist, London." 1lb., 4lb., and 11lb. Packets, at 1s. 6d. per lb., by Grocers every where.

SAUCE—LEA AND PERRINS
beg to caution the Public against Spurious Imitations of their world-renowned **WARRIOR BRAND SAUCE.**
Purchasers should ASK FOR LEA AND PERRINS' SAUCE, Pronounced by Connoisseurs to be "THE ONLY GOOD SAUCE."
* * * Sold Wholesale and for Export, by the Proprietors, Worcester; Messrs. CROUSE & BLACKWELL, London, &c. &c.; and by Grocers and Oilmen universally.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL,
Prescribed by the most Eminent Medical Men throughout the world, as the safest, sweetest and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, MEASLES, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.
Is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.
Sir JOSEPH OLLIFFE, M.D., Physician to the British Embassy at Paris.—"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Sir HENRY MARSH, Bart. M.D., Physician in Ordinary to the Queen in Ireland.—"I consider Dr. de Jongh's Light-Brown Cod Liver Oil to be a most valuable remedy, and a therapeutic agent of great value."
Dr. LAWRENCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.—"I invariably prescribe Dr. de Jongh's Oil in preference to any other, feeling assured that I am recommending a genuine article, and not a manufactured compound, in which the efficacy of this invaluable medicine is destroyed."

Dr. LANKESTER, F.R.S., Superintendent of the Food Collection, South Kensington Museum.—"I consider the Cod Liver Oil sold under Dr. de Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 6d.; Quarts, 8s.; and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

Sole Importers:
ANSAR, HARFORD & CO. 77, Strand, London, W.C.

CAUTION.—Beware of proposed Substitutions.

LOCK-STITCH SEWING MACHINES, Manu-
factured by the WHEELER & WILSON Manufacturing Company, with Recent Improvements. Crystal Cloth Presser, new style Hemmer, Binder, Corder, &c. (Offices and Sale Rooms, 120, REGENT-STREET, W. LONDON (late 483, Oxford-street). Instructions gratis to every Purchaser. The Lock-stitch Sewing Machine will Gather, Hem, Fell, Bind, or Stitch, with great rapidity, is the best for all descriptions of work in simple, compact, and elegant in design, the work will not unravel, and is the same on both sides; the speed is from 1,000 to 3,000 stitches per minute; a child 12 years old can work it, and the Machine is suitable alike for the Family or the Manufacturer. Illustrated Prospectus, with Testimonials, gratis and post free.

ALL FOREIGN MEDICINES, Medicinal
Plants, Chemicals, &c. may be obtained of AUGUSTUS WHITBURN (late GRIGNON), Foreign Chemist, 174, REGENT-STREET, opposite Burlington-street. Preparations of the United States; French, Italian and German Pharmacopoeias.—West-End Agent for Mr. Jeffrey's Respirators.

DINNEFORD'S PURE FLUID MAGNESIA
has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the Best Remedy for acidity of the stomach, heartburn, headache, gout and indigestion, and as a mild and delicate constitution, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Efferescent Beverage, in which its aperient qualities are much increased. Dryness of Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by DINNEFORD & Co. 173, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

CAPTAIN WHITE'S
CURRY or MULLIGATAWNY PASTE,
Curry Powder, Curry Sauce, and Oriental Pickle, may be obtained from all Sauce Vendors, and wholesale of
CROUSE & BLACKWELL, Purveyors to the Queen, Soho-square, London.

ONE OF DR. LOCK'S PULMONIC
WAFERS taken two or three times a day will immediately relieve a rapid course of Asthma, Consumption, Coughs, and all disorders of the Breath and Lungs. Have a pleasant taste. Price 1s. 10d., 2s. 6d. and 11s. per box. Sold by all druggists.

FOR WEAKNESS, INFLAMMATION and
IRRITATION of the EYES, caused by the Winds, Blight, Close Application to Literary and other Professional Occupations, the EYE-DOUCHE or FOUNTAIN, invented by SAVERY & MOORE, for the perfect application of Cold Water, Eye Lotions, &c. The effects produced are grateful and refreshing, and the sight is improved and permanently strengthened by the regular use of the FOUNTAIN. SAVERY & MOORE, Chemists to the Queen, 143, NEW BOND-STREET, LONDON, W. B. As the tradition of these Douches causes competition of the Vendors, it is important to OBSERVE that the names of SAVERY & MOORE are conspicuous on all instruments of their manufacture.

BLAIR'S GOUT and RHEUMATIC PILLS.
Price 1s. 10d. and 2s. 6d. per box.
This Preparation is one of the benefits which the Science of Modern Chemistry has conferred upon Mankind; for, during the first twenty years of the present century, the cure for Gout was considered a romance; but now the efficacy and safety of this Medicine are so fully demonstrated, by unassailable testimonials from persons in every rank of life, that Public Opinion pronounces this as one of the most important Discoveries of the present Age.
These Pills require no restraint of diet or confinement during their use, and are certain to prevent the disease attacking any vital part.

Sold by all Medicine Vendors, and at 202, Strand, London.

METCALFE, BINGLEY & CO.'S New Pat-
tern Brushes, and Penetrating unbleached Hair Brushes, Improved Flesh and Cloth Brushes, and genuine Smyrna Sponges, and every description of Brush, Comb, and Perfumery. The Tooth Brushes, each between the divisions of the Teeth—the hairs never come loose. M. & C.'s New and Delicious Perfumes—The Fairy Bouquet, The Oxford and Cambridge Bouquet, in bottles, 2s. 2d. and 4s. each.—Metcalfe's celebrated Alkaline Tooth Powder, 2s. per box.—Sole Establishment, 130 and 131, OXFORD-STREET.

DURABILITY OF GUTTA-PERCHA
TUBING.—Many inquiries having been made as to the Durability of Gutta-Percha Tubing, the Gutta-Percha Company have pleasure in giving publicity to the following letter. From SIR RAYMOND JARVIS, Bart. VENTNOR, Isle of Wight.
Second Testimonial.—March 10th, 1863.—In reply to your letter, received this morning, respecting the Gutta-Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders, and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here. From this Testimonial it will be seen that the CORROSION WATER of the ISLE of WIGHT has no effect on Gutta-Percha Tubing.

THE GUTTA-PERCHA COMPANY, PATENTERS,
18, WHARF-ROAD, CITY-ROAD, LONDON.

RUPTURES.—BY ROYAL LETTERS PATENT.
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 300 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided: a soft bandage being worn round the body, while the PATENT LEVER, acting with so much elastic force, it cannot be detected, and may be worn during sleep. A descriptive Circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer.

Price of a Single Truss, 10s. 51s., 52s. 6d. and 51s. 6d.; postage, 1s. Double Truss, 21s. 6d., 42s. and 52s. 6d.; postage, 1s. 6d.

P. O. O. made payable to JOHN WHITE, Post Office, Piccadilly.

ELASTIC STOCKINGS, KNEE-CAPS, &c.
for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Price 4s. 6d., 7s. 6d., 10s. and 12s. each; postage 6d.
JOHN WHITE, Manufacturer, 223, PICCADILLY, London.

NEW ALEXANDRE HARMONIUMS.

These Instruments are lower in price and superior to all other cheap Harmoniums.

ASTRUP CARLSS, Secretary.

Liverpool, November 19, 1861.

EXHIBITION of WATER-COLOUR

DRAWINGS.—ROYAL MANCHESTER INSTITUTION.

—In order to afford a more especial recognition of the claims of Water-colour Art than is possible at the General Annual Exhibition in the Autumn, the Council have again determined to OPEN an EXHIBITION of WATER-COLOUR DRAWINGS in APRIL NEXT, and the opportunity of exhibiting will not be confined to artists and private individuals, but will be extended to the trade generally. The Exhibition will continue open until the end of June, and Drawings will be received under regulations stated in the usual printed Circular. Works should be forwarded so as to arrive not later than April 10.

Mr. Joseph Green, of 14, Charles-street, Middlesex Hospital, will take charge of any works sent to him to forward. Parties willing to contribute, are requested to communicate particulars to the Honorary Secretary as early as possible, as it is desirable to ascertain the extent of the proposed Exhibition, and what space will be required.

HENRY COOK, Honorary Secretary.

ORIENTAL GENERAL CARRIERS.
THE ORIENTAL INLAND STEAM COMPANY (Limited), under subsidy from the Indian Government.
Capital, 500,000.

This Company acts as general carriers both by land and water, and as general forwarding Agents throughout the East. They receive goods in England for transmission to different points of India, whether on the Coast or in the Interior; they convey goods by railway, by steamboat, or other available means, from one part of India to another; and they receive goods at the different stations in the East. A number of these Agencies have been already established, and the others are being formed as rapidly as possible.

For tariff of rates, and of other necessary information, apply at the Company's Offices, 9, Billiter-street, London, or 3, Queen's-terrace, Southampton, or to the Company's Agents at the different Stations in the East. A number of these Agencies have been already established, and the others are being formed as rapidly as possible.

The arrangements for the MADRAS PRESIDENCY are not matured, but will be announced when completed.

EGYPTIAN DESERT SANITARIUM, for the TREATMENT OF PULMONARY and OTHER INFALIDS.

The above Establishment, beautifully situated in the Desert, near Cairo, surrounded by Gardens and Groves for Exercise, is intended to supply a want long felt by Invalids visiting Egypt, where they may, with the great advantage generally derived from the pure air of the Desert, have regular Medical Attendance, combined with domestic comfort.

The domestic arrangements are conducted by the Matron, Mrs. MICHAEL, under the medical and general superintendence of Dr. PATTERSON, the resident English Physician of Cairo. A limited number only can be admitted this season.—Terms: 20 Guineas per Month.

TURKISH BATHS, BROMPTON.—Alfred-place, Tauris-square.—Public and Private, for Ladies and Gentlemen, OPEN DAILY from 7 A.M. to 8 P.M. This Establishment is the largest, most elegant and best ventilated of any yet erected. It is under the immediate superintendence of the Proprietors—Medical men. Cards sent on application.

ROYAL TURKISH BATHS, BLOOMSBURY.—BEST for GENTLEMEN, 2s. 6d. ONLY ONE for LADIES, 1s. 6d. ALWAYS READY, PUBLIC and PRIVATE. QUEEN-SQUARE, RUSSELL-SQUARE. FROM 6 to 9 P.M. ONE SHILLING, with every luxury.

HYDROPATHY.—WINTER TERMS.—THE BEULAH-SPA HYDROPATHIC ESTABLISHMENT, Upper Norwood, within twenty minutes' walk of the Crystal Palace, is open for the reception of Patients and Visitors. Terms:—Patients, from 3 guineas; Visitors, from 2 guineas, according to accommodation.—Particulars of Dr. KITTERHAERT, M.D., the Resident Physician.

HYDROPATHIC SANATORIUM.—SUD-BROOK PARK, Richmond Hill, Surrey.—Physician, Dr. E. W. LANE, M.A., M.D. Edin.

THE TURKISH BATH on the premises, under Dr. Lane's Medical direction.

PETSCH & CO., FOREIGN BOOK-SELLERS.—The best Editions of Schiller (20s. to 50s.), of Goethe (4s. to 84s.), of Heine (3s.), &c., richly bound in stock; also all Books for the Study of Modern Languages. The Winter Catalogue, being just ready, will be sent post free on application. Translations into all Languages, and Advertisements in all parts of the world.—27, Leadenhall-street, E.C.

TO PRINTSELLERS, FRAME-MAKERS, &c. Engraving CHROMO-LITHOGRAPHS and choice LINE ENGRAVINGS of the highest character.—A DESCRIPTIVE CIRCULAR may be had, gratis and post free, of the few remaining copies of some of the choicest things ever produced, which will be shortly SOLD by AUCTION, at great reduction in price, but to become rare and valuable, and sought after on account of the steel plates and chromo-lithographic stones all being destroyed. Apply to DAY & SON, Lithographers to the Queen, 6, Gate-street, Lincoln's Inn-fields; and SOUTHGAT & BARNETT, 23, Fleet-street.

ESTIMATES FOR LITHOGRAPHY, ENGRAVING and PRINTING, Promptly furnished by ASHBE & DANGERFIELD, Lithographic Artists and Printers in Colours, Engravers on Wood and Copper, Copper-plate and General Printers, 22, BEDFORD-STREET, COVENT-GARDEN.

TO LET, at 9, Conduit-street, Regent-street, with use of a Committee Room, the Hall and Gallery of the Society of Galleries, to be the scene of the Art Exhibition, 40 feet by 21 feet, separate entrance from Maddox-street. Rent, including warming and gas, for one evening per week, between 6 and 10 o'clock, all the year round, and attendance, 30s. per annum; occasional use of the whole suite of Galleries may be had on request at present Monday and Tuesday Evenings.—Inquire of Mr. MOORE, on the Premises.

LUCKNOW, CAWNPORE, DELHI, AGRA, BENARES, and PUNJAB; HONGKONG, the PING PO, PEKIN, the SUMMER PALACE, and CANTON;

ALSO
PORTRAITS of the CELEBRITIES engaged during the Mutiny in India, and the late War in China.
SIGNOR F. BRATO has just arrived from China with a magnificent Collection of the above Photographic Views and Portraits which are now being published, by subscription, by E. H. HERING, PHOTOGRAPHER, 127, Regent-street, London, where the List is open for Subscribers' names.
A detailed Catalogue of the Views and Portraits will be forwarded free on receipt of two postage-stamps.

LEONARD & CO., BOOK-TRADE AUCTIONEERS, BOSTON, UNITED STATES.

LASÈGUE'S FRENCH ARTICULATION; or, Gift of Fluency to obtain Verbal and Idiomatic Sentences. Second Edit. Price 1s.—London: Simpkin, Marshall & Co.

THE HOROSCOPE of 1862.—The worst of us can stammer out a review of the past. It is only OLD MOORE who is gifted with the power of looking into the future. For years he has been listening to the "Vox Stellarum"—the motto of his famous Almanack; and reporting what he hears and sees in the sentences they utter. "We like OLD MOORE better than any Seer we know, for he is not given to religion or party, but writes impartially of all."—*Armagh Guardian*.
CAUTION.—Purchasers are respectfully requested to ask for the ominous "Old Moore's Penny Almanack," which may at once be known by observing at the foot of title-page the imprint of T. ROBERTS & CO. 8, Crane-court, Fleet-street, London. Sold by all Booksellers and Newsmen throughout the British Empire.

1862 ALMANACKS, Pocket-books, Diaries, Directories, Peerages, Annals, and all Books, &c. &c., whether in stock or not, including Medical Books, Law Books, or any other of no matter by whom published, are supplied at the rate of 5d. discount from each shipping by S. & T. GILBERT, 4, Copthall-buildings, back of the Bank of England, E.C. Please copy the address.

MR. PAYNE COLLIER'S EDITIONS OF SHAKESPEARE. In 6 vols. 8vo. price 4l. cloth.

AMERICAN SLAVES: THEIR CHRISTMAS WEEK.

Beadle & Co., of London and New York, will publish early in December, in fcap. 8vo. embellished with Engravings by eminent Artists, price 1s. 6d. paper boards; 2s. 6d. extra cloth gilt, a highly-interesting and original Novel, entitled

MAUM GUINEA and her PLANTATION CHILDREN: a Romance of Christmas Week among the American Slaves.

By Mrs. METTA V. VICTOR.

All the joy and sorrow, pathos and tragedy, of slave life are depicted in this delightful volume. It tells the story of the Christmas Holidays as they are enjoyed in the great sugar and cotton plantations of the United States; Barbados, Night-Dances, Story-telling, Torch-light Hunting, Courting and Marrying, are all reproduced to the very life; while through the whole runs the thread of a romance of absorbing beauty and power, illustrating the lights and shades of slave experience in an impressive manner.

Beadle & Co. 44, Paternoster-row.

THE GREAT EXHIBITION BUILDING.

In THE QUEEN OF SATURDAY, November 23, will appear the following Engravings, illustrative of the present condition and future aspect of the Great Exhibition Building:—Present Condition of the Nave—The Naves Completed—The Refinement Rooms—View of the Front of the Building as Completed, a large two-page Picture, with which are printed, for comparison's sake, the Design of the Building (Committee of 1851, and a View of Sir Joseph Paxton's Building—Portrait of Mr. Dilke. This number of 'The Queen' also contains the following Illustrations:—The First Fall of Snow—Portrait of the late King of Portugal—The Death of Tintoretto's Daughter, from a Picture in the Florence Exhibition—The Dancing School, drawn by Florence and Ada Claxton—Portrait of the late Thomas Duncombe, Esq.—The Volunteer Ball at the Guildhall—The Lowestoft Life-boat going out to a wreck on the Holme Sands—The Modern School of Athens: or, College Life in America, drawn by Florence and Ada Claxton—Landing of Federal Troops on the Kentucky Shore—The Public Scribe of San Carlo at Naples. The Needlework Department contains:—Bracket or Cornice Border in Bead-work and Wool-work, with a Key to the Colours to be employed.

Besides the eight-page Exhibition Supplement there will be given a Coloured 'Plate of the Fashions, expressly designed and prepared in Paris for 'The Queen.'

To be had of all Booksellers, and from the office on receipt of six stamps.—London, 248, Strand, W.C.

THE HOME TUTOR:

A TREASURY OF SELF-CULTURE and Complete LIBRARY
of USEFUL KNOWLEDGE, by the BEST MASTERS.

London: Ward & Lock, 158, Fleet-street.

On the 1st and 15th of every Month, in fcap. 8vo. paper covers,
in the French Style of Binding,

THE SHILLING VOLUME LIBRARY.

The CHANCELLOR of the EXCHEQUER, when proposing the Repeal of the Paper Duty, used as an argument for its removal the superiority, both in paper and print, of French popular Literature over the same class of works produced in England; and he attributed the reason of this difference to the fact that paper was untaxed in France, while it was taxed in England. Happily this distinction no longer exists. On the 1st October paper became free of Taxation. Therefore the

SHILLING VOLUME LIBRARY

is projected with the view of giving to the reading public the full benefit of the abolition of the Paper Duty. Each book in the

SHILLING VOLUME LIBRARY

will present to the buyer the utmost possible value both in quantity and quality.

The greatest care will be taken, so as to render the

SHILLING VOLUME LIBRARY

in all respects unexceptionable reading both for the young as well as for the old.

The following were ready November 15:—

1. FAMILY CREDIT. By WESTLAND MARSTON.
2. WHICH WINS—LOVE OR MONEY? By the Author of 'WHITEFRIARS.'
3. RECOLLECTIONS of a RELIEVING OFFICER. By E. P. ROWSELL.
4. LADY LISLE. By M. E. BRADDON.
5. The ROUND of WRONG. By EDMOND ABOUT. Translated by LASCELLES WRAXALL.
6. MEMOIRS of a LADY-IN-WAITING.

NEW POPULAR WORKS.

In uniform volumes, price 3s. each. Ornamental Covers, printed in clear type and on good paper. Also an Illustrated Edition, on superior paper, cloth gilt, price 3s. 6d.

GUSTAVE AIMARD'S

TALES OF INDIAN LIFE AND ADVENTURE.

- | | |
|----------------------------|------------------------|
| 1. TRAIL HUNTER. | 7. PRAIRIE FLOWER. |
| 2. PIRATE OF THE PRAIRIES. | 8. INDIAN SCOUT. |
| 3. TRAPPER'S DAUGHTER. | 9. BORDER RIFLES. |
| 4. TIGER SLAYER. | 10. FREEBOOTERS. |
| 5. GOLD SEEKERS. | 11. THE WHITE SCALPER. |
| 6. INDIAN CHIEF. | |

The above are now ready, and other Volumes are in active preparation.

NOTICE.—GUSTAVE AIMARD was the adopted son of one of the most powerful Indian tribes, with whom he lived for more than fifteen years, in the heart of the Prairies, sharing their dangers and their combats, and accompanying them everywhere, rifle in one hand and tomahawk in the other. In turn squatter hunter, trapper, warrior and miner, Gustave Aimard has traversed America from the highest peaks of the Cordilleras to the ocean shore, living from hand to mouth, happy for the day, careless of the morrow. Hence it is that Gustave Aimard only describes his own life. The Indians of whom he speaks he has known; the manners he depicts were his own.

London: Ward & Lock, 158, Fleet-street.

MR. SKEET

HAS JUST PUBLISHED

OLD VAUXHALL: a Romance.

By W. H. MARSHALL, 3 vols. post 8vo.

F. G. TRAFFORD'S WORKS.

NEW EDITION, 5s. bound.

TOO MUCH ALONE.

By F. G. TRAFFORD,
Author of 'City and Suburb.'

A NEW and CHEAPER EDITION,
in crown 8vo. price 5s. cloth.

[Now ready.]

"We can cordially recommend 'Too Much Alone' to any reader in quest of a thoroughly good novel. It is a well-conceived, well-wrought-out story; but we regard it less as a present success than the commencement of a successful career."—*Athenæum*.

"'Too Much Alone' is an exceedingly suggestive phrase, and what it portends is admirably realised in the novel of which it is the title. It is a thoroughly good novel, both in conception and execution, and ought at once to secure for its author an honourable popularity. Among the rare combination of qualities which distinguish it, is its downright reality, which yet does not preclude an infusion of ideal grace into a story of domestic life."—*Spectator*.

CITY AND SUBURB.

By F. G. TRAFFORD.

Author of 'Too Much Alone.'

A NEW and CHEAPER EDITION,
in crown 8vo. price 5s. cloth.

[Early in December.]

"This is a first-class work, and cannot fail to attract universal attention. It is one of the most interesting and instructive novels we have ever read."—*London Review*.

"In pathos, sentiment and vigour the author is almost equally at home, and we do not hesitate to say that he will be carried to a high status amongst the romance writers of the day."—*Press*.

"Sustains the author's right to hold a very high position among contemporary novelists."—*Spectator*.

"We feel assured that the author is destined to hold a high place in the ranks of English novelists."—*Literary Gazette*.

"Will repay perusal with interest. . . . Decidedly interesting."—*Athenæum*.

"Opens with great effect. Ruby reminds us of Thackeray's most successful female character—Trix."—*Globe*.

"Ruby the beauty will stand out as a distinct personage in the reader's memory when the dramatic persons of half-a-dozen intervening novels have melted into chaos."—*Saturday Review*.

"Has more than common interest attached to it."—*Observer*.

"We can unhesitatingly recommend the novel to all dwellers in 'City and Suburb.'"—*Critic*.

"The author has given us a really pleasing novel. The story is replete with interest."—*Morning Chronicle*.

"The announcement of a new work from this author's pen cannot fail to excite curiosity, and arouse expectation of that which is so dear to a novel reader, a really genuine, good novel. In the present instance that expectation is fulfilled: 'City and Suburb' is most equal in its ability and finish to the author's preceding works."—*Morning Post*.

FORTY YEARS' MILITARY AND PERSONAL ADVENTURES,

IN PORTUGAL, SPAIN, FRANCE, MALTA, NEW SOUTH WALES, NORFOLK ISLAND, NEW ZEALAND, ANDAMAN ISLANDS AND INDIA.

By Lieut.-Col. BUNBURY.

3 vols. with Illustrations, 51s. 6d.

[Now ready.]

"There is a vast fund of entertaining matter in these volumes, in which many particulars concerning the Wars in some of the localities named, and military duties in others, will afford very agreeable reading. The author has indeed 'done the State some service,' although, alas! it does not appear to have known it: he however writes in no carping or vindictive spirit, but merely gives an outline of his remarkable career, and leaves the world to wonder that one who was sent on military duty all over the world, and was engaged in the Peninsular War in his youth, and in the Indian Campaign in his later years, should have been overlooked and neglected by those in whose hands is the distribution of reward for active and able service."—*Bell's Messenger*.

"Reminiscences, which, extending as they do over a period of forty years (a great part of which have been passed in active service), cannot fail to comprise much that is interesting to the reader."—*Observer*.

"The Veteran who here speaks is a far better story-teller than the rank and file of his class. . . . His style is forcible and clear. . . . The descriptions of the author's residence in New South Wales are marked with more than average power; there is a good deal of really useful reading, too, in this portion of the work, for the Local Colonial Administration is faithfully portrayed and forcibly criticised."—*Literary Budget*.

"The author is strictly correct in calling the book a narrative of personal adventures—a book which, for light-hearted mirth and masculine energy, may be advantageously compared with any work of the season."—*Daily News*.

London: CHARLES J. SKEET, 10, King William-street, Charing Cross.

"This excellent and uniform series."
ENGLISH CHURCHMAN.

HISTORICAL CLASS BOOKS

FOR ADVANCED SCHOLARS.

These Works are designed to supply a long-acknowledged want in our School Literature—HISTORIES in Volumes of moderate size, adapted for the UPPER and MIDDLE FORMS in SCHOOLS.

The following are Now Ready:—

The STUDENT'S HUME; a History of England, from the Earliest Times to the Revolution of 1688. Based on the HISTORY by DAVID HUME, and continued to 1883. 20th Thousand. Woodcuts, post 8vo. 7s. 6d.

While Hume's language has been retained as far as was practicable, his errors have been corrected. The Roman and Saxon periods have been almost entirely re-written. In the remaining portion of the work very many important corrections and additions have been made from recent historians.

"'The Student's Hume' is certainly well done. In the form of Notes and Illustrations, many important subjects, constitutional, legal or social, are thus treated; and the authorities of the period are mentioned at its close."—*Spectator*.

II.

The STUDENT'S HISTORY of GREECE. From the Earliest Times to the Roman Conquest, with the History of Literature and Art. By DR. WM. SMITH. 20th Thousand. Woodcuts, post 8vo. 7s. 6d.

"'The Student's Greece' is written on an excellent plan, and has been carried out in a careful and scholarly manner. The great distinctive feature, however, is the History of Literature and Art. This gives it a decided advantage over all previous works."—*Athenæum*.

III.

The STUDENT'S HISTORY of ROME. From the Earliest Times to the Establishment of the Empire. With the History of Literature and Art. By DEAN LIDDELL. 20th Thousand. Woodcuts, post 8vo. 7s. 6d.

"'The Student's Rome' we should commend to the youthful student as the one history which will convey the latest views and most extensive information. Our opinion is, that there is no other work which so ably supplies a History of Rome suited to the present day."—*Blackwood's Magazine*.

IV.

The STUDENT'S GIBBON; a History of the Decline and Fall of the Roman Empire. By EDWARD GIBBON. Abridged by DR. WM. SMITH. 10th Thousand. Woodcuts, post 8vo. 7s. 6d.

"'The Student's Gibbon' is a single volume, with one hundred well-chosen engravings, the chief alterations being the omission of offensive anti-Christian sneers, and the incorporation of important notes in the body of the text. Dr. Wm. Smith has preserved the main features of the great historian's work."—*Guardian*.

V.

The STUDENT'S MANUAL of ANCIENT GEOGRAPHY. Based on the 'Dictionary of Greek and Roman Geography.' Edited by DR. WM. SMITH. Woodcuts. Post 8vo. 9s.

"The Student's Manual is a valuable addition to our geographical works. It contains the newest and most reliable information derived from the researches of modern travellers. . . . no better text-book can be placed in the hands of scholars."—*English Journal of Education*.

Also nearly ready,

1. **The STUDENT'S HISTORY of FRANCE.** From the Earliest Times to the Establishment of the Second Empire, 1852. Woodcuts. Post 8vo. 7s. 6d.

2. **The STUDENT'S MANUAL of the ENGLISH LANGUAGE.** By GEORGE P. MARSH. Edited, with Notes and a Preface, by WM. SMITH, LL.D. Post 8vo.

SMALLER HISTORIES FOR JUNIOR CLASSES.

1. **A SMALLER HISTORY of GREECE.** By DR. WM. SMITH. Woodcuts. 12mo. 3s. 6d.

2. **A SMALLER HISTORY of ROME.** By DR. WM. SMITH. Woodcuts. 12mo. 3s. 6d.

3. **A SMALLER HISTORY of ENGLAND.** By DR. WM. SMITH. Woodcuts. 12mo. [Nearly ready.]

JOHN MURRAY, Albemarle-street.

Now ready, in post 8vo. with 3 Illustrations, price 7s. 6d.
WILD DAYRELL: a Biography of a Gentleman Exile. By JOHN KEMP, Esq., Author of 'Sketches in the South of France,' &c.

"Various as a dream, or as actual life, are the persons who mix themselves naturally in the drama of this young Englishman's few years abroad; and very pleasant reading will be found in these pages."—*Globe*.

London: Longman, Green, and Co. Paternoster-row.

NEW FRENCH READING-BOOK FOR ENGLISH SCHOOLS.

Just published, in 12mo. price 4s. 6d. cloth.

LECTURES FRANÇAISES; or, Extracts in Press from Modern French Authors. With copious Notes for the use of English Students. By LÉONCE STIEVENARD, Principal French Master in the City of London School; Second French Master in St. Paul's School; and Lecturer on the French Language and Literature in King's College.

London: Longman, Green, Longman, and Roberts.

Just published, in 12mo. price 2s. cloth.

THE PRONOUNCING READING-BOOK for CHILDREN from Five to Ten Years of Age, on a New Plan, lessening the Difficulties of Learning to Read, and imparting a Correct Pronunciation. With an Introduction to the Art of Reading. By W. L. ROBINSON.

M. WINDHAM, Founder of the Infant School System, says in a letter to the Author:—"Your 'Pronouncing Reading-Book' is well suited to enable a child to read with greater facility than any plan I have seen." It supplies a long-felt public want, and I can confidently recommend it to all engaged in tuition. Several of my grandchildren being taught on your system, enables me to speak practically as to its results."

London: Longman, Green, and Co. Paternoster-row.

HINDUSTANI BOOKS IN ENGLISH ROMAN TYPE.

Now ready, in 12mo. price 7s. cloth.

GLOSSARY, HINDUSTANI AND ENGLISH, to the New Testament and Psalms. By COTTON MATHER, late Assistant Professor of Hindustani, at Addiscombe College.

By the use of this work and a copy of the *Psalms* and *Testament*, a tyro acquainted with only the elementary principles of the language would have no difficulty in acquiring a thorough knowledge of the *language* of India in its most common and colloquial form.

Monier Williams's Hindustani Primer, price 1s. 6d.

Williams and Mather's Introduction to Hindustani, 2s. 6d.

Monier Williams's Bagh-o-Bahar, price 5s.

London: Longman, Green, Longman, and Roberts.

LIDDELL AND SCOTT'S TWO GREEK LEXICONS.

Now ready, in crown 4to. price 31s. 6d. cloth.

A GREEK-ENGLISH LEXICON, compiled by HENR. GEORGE LIDDELL, D.D., Dean of Christ Church; and ROBERT SCOTT, D.D., Master of Balliol College. Fifth Edition, revised and augmented.

This Fifth Edition has been thoroughly revised and corrected; and very large additions have been made to it, from the materials contained in Root and Palm's Greek-German Lexicon, and other works.

Also, the Ninth Edition, in square 12mo. price 7s. 6d. cloth.

A LEXICON, Greek and English, abridged from Liddell and Scott's 'Greek-English Lexicon.'

Oxford: at the University Press.
 London: Longman, Green, Longman, and Roberts;
 and J. H. and J. Parker, London and Oxford.

DR. NEIL ARNOTT ON PROGRESS AND CIVILIZATION.

Just published, in 8vo. price 6s. 6d. cloth.

A SURVEY of HUMAN PROGRESS, from the Savage State to the Highest Civilization yet attained: a Progress so little perceived by the multitude in any age, as is the slow growing of a tree by the children who play under its shade—but which is leading to a new condition of Mankind on Earth. By NEIL ARNOTT, M.D. F.R.S. F.R.C.P. &c., Physician Extraordinary to the Queen.

London: Longman, Green, and Co. Paternoster-row.

Just published, in 8vo. price 7s. 6d. cloth.

ON WINDS AND STORMS: with an Essay on Weather and its Varieties. By THOMAS HOPKINS, M.B.M.S.

"In meteorological researches, observes the Author, the desideratum appears to be to obtain a clear perception of the natural powers or forces that disturb the atmosphere, so as to cause its great movements, and to prove what these forces are."

London: Longman, Green, Longman, and Roberts.

Just published, 2 vols. crown 8vo. cloth, price 12s.

ABBEYS AND ATTICS; or, Sketches of Artist Life. By JULIAN STRICKLAND.
 London: William Freeman, 102, Fleet-street.

NEW WORK ON INDIA.

THE NIZAM, HIS HISTORY and RELATIONS with the BRITISH GOVERNMENT. By H. G. BRIGGS, Secretary, Bombay Municipality. 2 vols. 8vo. Portraits, 2s. 2s.

Bernard Quaritch, 15, Piccadilly.

This day, post 8vo. cloth, 5s. 6d.

THE FOOTSTEPS OF SHAKSPERE; or a Ramble with the Early Dramatists, containing new and interesting Information respecting Shakspeare, Lilly, Marlowe, Greene and others. Post 8vo. cloth, 5s. 6d.

Lately published, post 8vo. cloth, 3s. 6d.

THE SONNETS OF SHAKSPERE, re-arranged and divided into Four Parts, with an Introduction and Explanatory Notes.

"A work well calculated to draw further attention to these remarkable productions."—*Notes and Queries*.

London: J. Russell Smith, 36, Soho-square.

"We recommend this little brochure, with its unpretending common sense, to the perusal of parents and guardians." *Athenæum*.

HISTORICAL LESSONS: in English and French. By the Author of 'Lessons on Objects,' &c. Price 3s. 6d. [In the press.]

WIT and WISDOM; or, Friends for the Fireside: a Book for Christmas. By Mrs. MATHEWS.
"This is not only one of the cheapest, but one of the most invaluable Christmas books that ever came under our notice. It will cheer and enliven thousands of family groups by the brilliancy and smartness of its 'Wit,' as well as by the 'Wisdom' it so eloquently and morally inculcates." *Adford News*.

POPULAR NEW NOVELS.

The FRIGATE and the LUGGER: a Romance of the Sea. By C. F. ARMSTRONG, Author of 'The Two Midshipmen,' 'The Cruise of the Darling,' &c.
"The Frigate and the Lagger" is, we unhesitatingly pronounce, the most intensely interesting nautical fiction that has ever been presented to the reading public. It far surpasses all Capt. Armstrong's previous novels. The best sea tales of Marryat and Cooper do not excel or even equal this in incident." *Kent Express*.

The COST of a CORONET: a Romance of Modern Life. By JAMES MCGREGOR ALLAN, Author of 'The Intellectual Severance of Men and Women,' &c. In 3 vols. 21s.

CONSTANCE DALE: a Story.
"The Author of 'John Halifax' will find a powerful rival in Charlotte Hardcastle. This book, like Miss Mulock's, displays the impress of a master mind; it is striking, not only for original ideas, for unusual talent, but great genius." *Advertiser*.
"The story commends itself not less by the unimpeachable morality than by the agreeable style in which it is written, and cannot fail to be deeply interesting to the readers of works of fiction." *Observer*.
"The whole tone of the book is unexceptionable, and the moral excellent." *Athenæum*.

The ANCHORET of MONTSERRAT. By Mrs. KELLY, Daughter of the late Mrs. Sherwood, Author of 'The Lady of the Manor,' &c. In 3 vols. post 8vo. price 31s. 6d. [Now ready.]
"The admirers of the late Mrs. Sherwood will read with pleasure 'The Anchoet of Montserrat,' written by her daughter, Mrs. Kelly. The mother's lessons are beautifully, as it were, reproduced by the pen of the daughter; whilst a Preface by Dr. Madden, the celebrated Eastern traveller, gives, by its graphic description of the holy mountain, additional charm to the novel." *Express*.
"An able and powerfully-written novel." *Observer*.

CULVERLEY RISE. By Julia Corner, Author of 'The Histories of England, Spain,' &c.
"It will increase the reputation of Miss Corner." *Observer*.

LIFE in the LAND of the FIRE-WORSHIPER. Second Edition. Edited by FREDRIKA BREMER.
"It is both an amusing and an instructive book. The description of manners, customs and scenes are all fresh and vivid, drawn from actual life. It is not often we have read a more entertaining book." *Athenæum*.

NOVELS IN THE PRESS.

MARRYING for MONEY. By Mrs. MACKENZIE DANIELS, Author of 'Our Brother Paul,' &c. 3 vols. 31s. 6d.

SCAPEGRACE at SEA; or, Sailors on Shore and Soldiers at Sea. By J. NEALE, Esq., Author of 'Cavendish,' 'The Flying Dutchman,' &c. 3 vols. 31s. 6d.

WHALLABROOK; or, Desolate Hearts: a Tale of the Moor. In 3 vols. 21s.

MORTEFONTAINE; or, a Marriage at the Madeleine. By the CHIEF CLANONCHADH of MAR. 3 vols. 21s.

CHARITY: a Tale. By the Author of 'Angelo Sanmartino.' 1 vol. 10s. 6d.

EDMONSTON & DOUGLAS' LIST OF NEW PUBLICATIONS AND ANNOUNCEMENTS.

In the press, in 1 vol. crown 8vo.
AT THE SEA-SIDE.

MEMOIR of LIEUT.-GEN. SIR RALPH ABERCROMBY, K.B., 1793-1801.

By his Son, JAMES LORD DUNFERMLINE.

"The life of such a man is well worth studying; and through the judicious composition of this Memoir it may be studied easily. The book has the unusual merit of not containing a superfluous page." *Saturday Review*, Oct. 19.

In 1 vol. demy 8vo. with Illustrations, price 8s. 6d.

OBSERVATIONS ON CLINICAL SURGERY.

By JAMES SYME,

Professor of Clinical Surgery in the University of Edinburgh.

Now ready, New Edition, 2 vols. fcap. 8vo. 15s.

HORÆ SUBSÆVÆ.

By JOHN BROWN, M.D. F.R.S.E.

"Of all the John Browns, commend us to Dr. John Brown, the physician, the man of genius, the humourist, the student of men, women and dogs. By means of two beautiful volumes, he has given the public a share of his by-hours, and more pleasant hours it would be difficult to find in any life. Dr. Brown's masterpiece is the story of a dog called 'Rab.' The tale moves from the most tragic pathos to the most reckless humour, and could not have been written but by a man of genius. Whether it moves to laughter or tears, it is perfect in its way, and immortalises its author." *Times*, Oct. 21.

Nearly ready, 1 vol. crown 8vo. with Illustrations,

**A SELECTION FROM DASEN'S
POPULAR TALES FROM THE NORSE.**

Now ready, in 1 vol. 4to. price 6s.

London: LONGMAN, GREEN, LONGMAN, and ROBERTS.

MR. BENTLEY'S LITERARY ANNOUNCEMENTS.

Autobiography of Mary Granville

(MRS. DELANY), including her Reminiscences of the Court of Queen Charlotte. Second Part, in 3 vols. demy 8vo. with Nine beautiful Portraits, with Index, 50s.

Extract from 'The Times' Notice of the First Series.

"The best is still to come, the last eight-and-twenty years of her life, when age had ennobled her, and when she moved about the world in it, but not of it. She had known everybody, and could talk to the rising generations of innumerable persons now existing but in name."

Lives of the Archbishops

OF CANTERBURY; from the MISSION OF AUGUSTINE to the DEATH of HOWLEY. By WALTER FARQUHAR HOOK, D.D., Dean of Chichester. Vol. II. 8vo. 15s.

The American Union:

Its Value and real Effects on the Well-being of the American People; the Causes of its Disruption, and probable Results of the present Conflict; with an Examination of our own Interests in the Issue, and an Inquiry into Secession as a Constitutional Right. By JAMES SPENCE. 8vo. 10s. 6d. [Ready.]

London: RICHARD BENTLEY, New Burlington-street,
Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

The LIFE of J. M. W. TURNER, R.A.

From Original Letters and Papers furnished by his Friends and Fellow Academicians. By WALTER THORNBURY. 3 vols. 8vo. with Portraits, &c. 30s.

"Mr. Thornbury has been engaged, during the last four years, in collecting materials for this biography. He has had every possible advantage for the accomplishment of his task—a personal acquaintance with Turner, the advice of Mr. Ruskin, and the ready assistance of all Turner's friends. Every one to whom Mr. Thornbury applied for information appears to have given it willingly. Of the immense mass of materials thus brought together, Mr. Thornbury has made skilful use, and constructed an honest memorial of the great painter. He has done his part ably. The artist will refer to these volumes frequently for authentic information regarding the great modern master and his works, and the student of life and manners will find in them a rich store of entertainment."—*Daily News*.

The LIFE of Admiral Sir CHARLES

NAPIER, K.C.B.; with HIS CORRESPONDENCE. From his Private Papers. By Major-General EILEAS NAPIER. 3 vols. 8vo. with Portrait and Charts. 30s.

"Sir Charles Napier will undoubtedly rank among the first of our sea worthies. He has found a worthy biographer and chronicler in the person of his Step-son. The biography abounds in traits of character, and there are details of love, marriage and home-life which contrast very pleasantly with the more exciting scenes. The work is very honestly put together; without pretence, it accomplishes much; bringing all the incidents of the Admiral's life together, so as to create a story of great interest, with much that is amusing for the general, and more that is instructive to the professional reader."—*Athenæum*.

FRENCH WOMEN of LETTERS.

By JULIA KAVANAGH, Author of 'NATHALIE,' &c. 3 vols. 21s. [This day.]

TRAVELS in the HOLY LAND. By

FREDRIKA BREMER. Translated by MARY HOWITT. 3 vols. [Just ready.]

The OKAVANGO RIVER. A Nar-

ative of Travel, Exploration and Adventure. By CHARLES JOHN ANDERSON, Author of 'LAKE NGAMI.' 8vo. with Portrait of the Author and numerous Illustrations. 21s.

"Mr. Anderson's book, from the number of well-told adventures, its rich fund of information, and spirited illustrations, will command a wide circle of readers. The interest of his story never flags for a moment."—*Athenæum*.

LADY CHARLOTTE PEPYS'S DO-

MESTIC SKETCHES in RUSSIA. 3 vols. 21s.

"We recommend these interesting and agreeable volumes to all who wish for pleasant reading, besides acquiring a knowledge of the ways and customs of another country."—*Sun*.

TRAVELS in the REGIONS of the

AMOOR, and the Russian Acquisitions on the Confines of India and China. By T. W. ADAMS, Esq., Author of 'Oriental and Western Siberia.' Dedicated, by permission, to Her Majesty. Second Edition. With Map and 88 Illustrations, 21s. 2s. bound.

"A noble work. The entire volume is admirable for its spirit, unexaggerated tone, and the mass of fresh materials by which this really new world is made accessible to us."—*Athenæum*.

The SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents, by Dr. CHALLICE. 3 vols. with Portraits, 21s.

The VALLEY of a HUNDRED

FIRES. By the Author of 'MARGARET and her BRIDESMAIDS.' Illustrated by J. E. MILLAIS, A.R.A. 5s. bound. Forming the New Volume of HURST & BLACKETT'S STANDARD LIBRARY of CHEAP EDITIONS.

"Whether in delineation of character, in lucidity of plot, in description of scenery, in representation of life as it is, or in sound well-enforced moral, we know no novel of the last three or four years to equal this production. Of the popular Author of 'Margaret and her Bridesmaids.' If asked to classify it, we should give it a place between 'John Halifax' and 'The Caxtons.'"—*Herald*.

THE NEW NOVELS.

The LAST of the MORTIMERS. By

the Author of 'MARGARET MAITLAND,' 'THE HOUSE on the MOOR,' 'ADAM GRAEME,' &c. 3 vols.

SIR RICHARD HAMILTON.

"The reader will be delighted with this book, and will be the better for reading it. It is full of action, life and character. The plot is well constructed, and the style vigorous. The hero is a faithful portrait of a thorough English gentleman, and the pictures of English society are very gracefully and agreeably drawn."—*John Bull*.

The HOME at ROSEFIELD. By

EDWARD COPPING. 3 vols.

"A very touching and life-like story, of great simplicity and beauty; and hard indeed must be the heart unaffected by its genuine tenderness and pathos."—*Daily News*.

EAST and WEST. By J. Frazer

CORKRAN. 3 vols.

NOTICE TO QUIT. By W. G. Wills,

Author of 'LIFE'S FORESHADOWINGS.' 3 vols.

"An excellent novel, pleasant to read; and the moral that runs throughout is delicately spun, and not too obtrusive."—*Athenæum*.

WHITE and BLACK. A Tale of

the SOUTHERN STATES. 3 vols. [Next week.]

London: LONGMAN, GREEN, LONGMAN, and ROBERTS.

LONDON, SATURDAY, NOVEMBER 23, 1861.

LITERATURE

Lives of the Engineers: with an Account of their Principal Works. Comprising also a History of Inland Communication in Britain.
By Samuel Smiles. Vols. I. and II. (Murray.)

It would appear that from the very moment when

—Britain first, at Heaven's command,
Arose from out the azure main,

there commenced a series of engineering processes, which have not yet been completed. The first occupiers of the coast-land were bound to keep out the invading sea, and Romney Marsh was drained, if not dried, it is supposed by parties of immigrating Frisians who came hither and "squatted." Then, while these early engineers were engaged in keeping the sea out, others were occupied in keeping rivers—and particularly the River Thames—in. From above London to the Nore, the Thames is an artificial river. All those localities on its banks still called Marshes were formerly broad reaches of the river, at certain states of the tide; and "bankside" continues to indicate how the river was kept where the gentleman in 'The Critic' says it should ever remain—"within its banks." The embanking of the Thames is said to have been a Roman work; but as Mr. Smiles believes that the British London had "acquired considerable importance even before the Roman period," it is possible that the then lords of the position may have had an early hand in the achievement. The Romans, however, were such reclaimers of land, particularly along the shores of the Wash, that the old conservative acorn-eaters pitied them as men who wore out their hands and bodies in clearing woods and banking fens. The labour, nevertheless, was not altogether perfected; and, even down to a recent period, so fatal was the atmosphere of these districts, that Death there was known as "the Bailiff of Marsh-Land."

The first great draining engineer on drowned lands was Vermuyden, who, in the Stuart days, at great cost and self-ruin, converted water, mud and ooze into rich corn, or healthy, inhabitable land. The cure effected was very much to the disgust of the patients, the Fen people. They hated the Dutchman and his Dutch labourers; they dreaded the loss of many privileges when the Muckslush Heath that was their own should be converted into Crown land. They foresaw a forfeiture of much liberty and lawlessness with their mingled land and water, through which every offender knew a way to safety, and no royal messenger dared carry the King's writ. They were content with things as they were: why should content and things be disturbed? Agree! Well, agree was their birthright; and as for rheumatism, if they liked to entertain it, why should they be deprived of the enjoyment by the Stuart and his Dutchman?

Out of the popular discontent political agitators spun a vast amount of "bunkum," but ultimately the work was carried through, and such districts as the Great Bedford Level, which had hitherto been incubating beneath mud and water, made their first appearance on the permanent stage of Great Britain.
